<b>Preface</b>	<b>XIII</b>
<b>List of Contributors</b>	<b>XV</b>
<b>Chapter 1. Probabilistic approaches to the material-related reliability of fracture-sensitive structures</b>	
J. W. Provan	
1.1 Introduction	1
1.1.1 Introductory remarks	1
1.1.2 Reliability: general considerations	3
1.1.3 Review of fatigue reliability models	4
1.1.3.1 The exponential distribution	4
1.1.3.2 The normal of Gaussian distribution	5
1.1.3.3 The log-normal distribution	6
1.1.3.4 The gamma distribution	7
1.1.3.5 The Weibull distribution	8
1.1.3.6 The Gumbel (extreme-value) distributions	10
1.1.3.7 The Birnbaum–Saunders distribution	12
1.1.3.8 Other reliability distributions	14
1.1.4 The hazard rate concept	14
1.2 P–S–N Analysis	15
1.1.2 Introductory remarks	15
1.2.2 P–S–N diagram	15
1.2.3 Reliability when the cycles-to-failure are dependent on the initial strength of the component	17
1.2.4 Time dependent stress-strength	19
1.2.5 Further considerations	19
1.3 Stochastic crack growth	22
1.3.1 Introduction	22
1.3.2 Stochastic crack propagation	22
1.3.3 Significantly weaker spot stochastic crack growth	26
	<b>V</b>

## *Contents*

1.4 The micromechanics approach to fatigue failure	27
1.4.1 Introduction	27
1.4.2 The foundation of micromechanics	27
1.4.2.1 The micromechanic axioms pertaining to fatigue failure	27
1.4.2.2 Experimental and theoretical studies on the elastic response of metals	29
1.4.3 Fatigue crack initiation	31
1.4.4 Fatigue crack propagation	32
1.4.5 Fatigue crack experimental investigations	35
1.4.6 Comparison of theoretical and experimental results	36
1.5 A fatigue reliability law based on probabilistic micromechanics	37
1.5.1 Introductory remarks	37
1.5.2 The micromechanics fatigue reliability relation	38
1.5.3 An experimental investigation of fatigue reliability laws	39
1.6 Concluding remarks	44

## **Chapter 2. Probabilistic damage tolerance analysis of aircraft structures**

B. Palmberg, A. F. Blom and S. Eggwertz

2.1 Introduction	47
2.2 Basic assumptions	48
2.3 Load spectra	49
2.3.1 Specification of loads and environment	49
2.3.2 Acquisition of load spectra in service	50
2.3.3 Load sequences, truncations	52
2.3.4 Scatter considerations	53
2.4 Stress and stress intensity analysis	54
2.4.1 Structural models	54
2.4.2 Available handbook and literature results	58
2.4.3 Disturbances such as residual stresses, contact stresses, friction	60
2.5 Imperfections	62
2.5.1 Classification of imperfections	62
2.5.2 Quality control	62
2.5.3 Equivalent initial flaw sizes	63
2.5.4 US military damage tolerance requirements	67
2.6 Crack growth	68
2.6.1 Constant amplitude crack growth rate	68
2.6.2 Variable amplitude crack growth rate	70
2.6.3 Variability in crack growth rate	72
2.6.4 Predicting fatigue crack growth	73
2.6.5 Stochastic modelling of crack growth	77
2.7 Fracture mechanics and residual strength	86
2.7.1 Material behaviour	86

2.7.2	Linear elastic fracture mechanics	89
2.7.3	Nonlinear fracture mechanics	92
2.7.4	Scatter in fracture toughness	95
2.7.5	Probability of failure	96
2.8	Inspection during service life	102
2.8.1	Damage sources and inspection procedures	102
2.8.2	Probability of crack detection by NDI methods	102
2.8.3	Length of intervals	106
2.8.4	US military damage tolerance requirements	107
2.8.5	Crack size distribution after multiple inspections	108
2.9	Structural safety	113
2.9.1	Discussion of USAF damage tolerance requirements	113
2.9.2	Residual strength of structures	115
2.9.3	Safety analysis	116
2.9.4	Numerical example	118
2.10	Concluding remarks	128

**Chapter 3. Aircraft structural reliability and risk analysis**

F. H. Hooke

3.1	Introduction	132
3.1.1	The reliability concept	133
3.2	Basic reliability and risk mathematics	135
3.2.1	Mixed population with different risks	137
3.3	Physical aspects of structural failure	139
3.3.1	Loading actions	139
3.3.2	Structural behaviour	140
3.4	Mathematical-statistical model representing a real structural situation	142
3.5	Reliability without inspections – the safe life situation	146
3.5.1	Risk of static ultimate load failure	147
3.5.2	Risk of failure with deteriorating strength	148
3.5.3	Partitioning the risk	149
3.5.4	Averaging the instantaneous risk	152
3.5.5	Truncation of the strength – time curve	152
3.5.6	Structures with initial cracks	154
3.5.7	Structures with multiple failure modes and locations	155
3.6	Risk of failure with inspectable structures	156
3.7	Illustrative examples	157
3.7.1	Safe life situation – ultra high strength material	158
3.7.2	Safety-by-inspection situation: typical aluminium alloy material	160
3.7.2.1	Distribution of strength with virgin strength preserved	160
3.7.2.2	Change of strength distribution with time – deteriorating strength	161
3.7.2.3	Safety by inspection	162

## Contents

3.8	Acceptable risk	164
3.9	Reliability of reliability estimates	165
3.9.1	Confidence intervals related to the sampling of $H$	166
3.9.2	Confidence regions related to the sampling of $\sigma_{\log H}$	166
3.9.3	Confidence intervals related to the sampling of $U_0$	167
3.9.4	Confidence in relation to extrapolation of the spectrum	167
3.9.5	Confidence related to safe-by-inspection structures	168
3.10	General discussion	168

### Chapter 4. Stochastic crack growth models for applications to aircraft structures

J. N. Yang, W. H. Hsi, S. D. Manning, and J. L. Rudd

4.1	Introduction	171
4.2	Stochastic models for fatigue crack propagation	173
4.2.1	Stochastic crack propagation model	173
4.2.2	Fatigue crack growth data in fastener holes	174
4.2.3	Lognormal crack growth rate model and analysis procedures	176
4.2.4	Lognormal random process model	181
4.2.5	Lognormal white noise model	182
4.2.6	Lognormal random variable model	183
4.2.7	Correlation with experimental test results	186
4.2.7.1	General lognormal random process model	186
4.2.7.2	Lognormal random variable model	189
4.3	Second moment approximation	191
4.3.1	Mean and standard deviation of $W(t)$	194
4.3.2	Weibull approximation	195
4.3.3	Gamma and other approximations	196
4.3.4	Correlation between second moment approximations and experimental test results	197
4.4	Fatigue crack propagation in center-cracked specimens	198
4.4.1	Synergistic sine hyperbolic crack growth rate function	201
4.4.2	Stochastic models and second moment approximations	202
4.4.3	Correlations with experimental test results	203
4.5	Factors affecting probabilistic prediction of fatigue crack propagation	206
4.5.1	Fatigue crack growth analysis procedures	206
4.5.2	Equal number of data points for each specimen	207
4.5.3	Data processing procedures	208
4.6	Conclusions and discussions	209

### Chapter 5. Durability of aircraft structures

S. D. Manning, J. N. Yang, and J. L. Rudd

5.1	Introduction	213
5.2	Durability design requirements	214
5.2.1	Analytical requirements	215
5.2.2	Experimental requirements	216

5.3	Durability analysis criteria	216
5.3.1	Durability critical parts criteria	216
5.3.2	Economic life criteria/guidelines	217
5.4	Durability analysis methodology	219
5.4.1	General description	220
5.4.2	Assumptions and limitations	220
5.4.3	Initial fatigue quality (IFQ) model	221
5.4.3.1	IFQ model equations for Case I ( $b > 1$ )	224
5.4.3.2	IFQ model equations for Case II ( $b = 1$ )	225
5.4.4	Durability analysis procedures	226
5.5	Durability analysis details	227
5.5.1	EIFS distribution	228
5.5.2	Test/fractographic guidelines	229
5.5.2.1	Test guidelines	230
5.5.2.2	Guidelines for fractographic data	232
5.5.3	Fractographic data pooling concepts	232
5.5.4	Determination of EIFSD parameters	234
5.5.4.1	General concepts and guidelines	235
5.5.4.2	Estimation of $Q_i^*$	236
5.5.4.3	Estimation of $\alpha_i$ , $\beta_i$ and $\varepsilon_i$	237
5.5.4.4	Determination of $\alpha$ and $Q\beta$	238
5.5.4.5	Estimation of EIFSD parameters and evaluation of goodness-of-fit	239
5.5.5	Statistical scaling of $\beta$ parameter	245
5.5.6	Probability of crack exceedance	247
5.5.6.1	Service crack growth master curve	247
5.5.6.2	Crack exceedance predictions	249
5.5.7	Formats for presenting durability analysis results	251
5.6	Durability analysis demonstration	251
5.6.1	Fighter lower wing skins	251
5.6.2	Complex-splice specimens subjected to bomber load spectrum	259
5.7	Comparison of deterministic and probabilistic approaches for durability analysis	263
5.7.1	Deterministic crack growth approach	263
5.7.2	Probabilistic approach	264
5.7.3	Conceptual comparisons	264
5.7.3.1	Durability analysis based on DCGA	265
5.7.3.2	Durability analysis based on probabilistic approach	265
5.7.4	Conclusions	266
5.8	Summary and concluding remarks	267
<b>Chapter 6. The reliability of pressurized water reactor vessels</b>		
R. F. Cameron, G. O. Johnston, and A. B. Lidiard		
6.1	Introduction	269

## Contents

6.2	Statistics of pressure vessel failure	272
6.2.1	Nuclear primary circuit	274
6.2.2	Non-nuclear vessels	275
6.3	General physical aspects	277
6.3.1	Cracks – their causes, detection and repair	281
6.3.1.1	Causes and incidence of cracks	282
6.3.1.2	Detection of cracks by non-destructive examination	283
6.3.1.3	Repair of cracks	283
6.3.2	Material toughness and failure mechanisms	283
6.3.3	Crack growth by fatigue	287
6.3.4	Transient loadings	290
6.4	Mathematical formulation	291
6.4.1	General expressions for the failure integral	293
6.4.2	Deterministic crack growth	296
6.4.3	Effect of previous loading: the ‘cold hydrotest’	298
6.5	The distribution functions of physical quantities	299
6.5.1	The initial crack-size distribution function	299
6.5.1.1	Cracks arising in manufacture	300
6.5.1.2	Efficiency of the detection of cracks	302
6.5.2	Fracture toughness and flow stress	304
6.5.3	Fatigue crack growth and the transfer function	306
6.6	Applications	307
6.6.1	U.S. and European L.W.R. pressure vessel calculations	308
6.6.2	Survey of results and conclusions	309
6.6.2.1	Absolute failure rates	309
6.6.2.2	Dependence of failure rate upon time in service	311
6.6.2.3	Sensitivity to the crack incidence function	312
6.6.2.4	Sensitivity to fracture toughness	314
6.6.2.5	Sensitivity to stress-intensity function and failure condition	315
6.6.2.6	Sensitivity to crack growth rates	316
6.6.2.7	Relative effects of different transients	317
6.6.2.8	Relative contributions of different regions of the vessel	317
6.6.2.9	In-service inspection	318
6.7	Conclusion	318
Appendix 6.1	Failure criterion in elastic-plastic fracture mechanics (the R6 method)	320
Appendix 6.2		320
Appendix 6.3	Example calculation of $\bar{P}_f$	321

## Chapter 7. Applications of PFM in the nuclear industry to reactor pressure vessel, main coolant piping and steel containment

R. Wellein

7.1	Introduction	325
-----	--------------	-----

7.2	Reactor pressure vessel	326
7.2.1	Brittle fracture of the RPV	327
7.2.2	Defect distributions	327
7.2.3	Influence of inspections and tests	330
7.2.4	Results	330
7.3	Main coolant piping	332
7.3.1	Leakage of the MCP	332
7.3.2	Model of the defect distribution in welds	333
7.3.3	Influence of vibrations	336
7.4	Steel containment	337
7.4.1	Two-criteria-approach	337
7.4.2	Distributions of material properties	338
7.4.3	Distributions of defect dimensions	342
7.4.4	Results	346
7.5	Conclusions	350

**Chapter 8. Numerical methods in probabilistic fracture mechanics**

A. Brückner

8.1	Introduction	351
8.2	Processing of input data	352
8.2.1	Curve fitting	352
8.2.1.1	Classical statistics	352
8.2.1.2	Bayesian methods	355
8.2.2	Extrapolation from incomplete data	359
8.2.3	Model calculations	361
8.2.3.1	Model of crack formation in welds	361
8.2.3.2	Extreme value theory	361
8.3	Numerical methods for the calculation of failure probabilities	364
8.3.1	Monte Carlo methods	364
8.3.1.1	Simulation	364
8.3.1.2	Random number generators	365
8.3.2	Variance reduction	365
8.3.2.1	Crude Monte Carlo	365
8.3.2.2	Stratified sampling	367
8.3.2.3	Importance sampling	369
8.3.3	Applications to probabilistic fracture mechanics	372
8.3.3.1	Applications of stratified sampling	372
8.3.3.2	Applications of importance sampling	372
8.4	Approximation methods	375
8.4.1	Basic ideas	375
8.4.1.1	Linear problems with normal distributions	377
8.4.1.2	Non-linear problems with normal distributions	378
8.4.2	Non-linear functions $g$ and non-normal distributions	380
8.4.2.1	Normal tail approximation	380

## Contents

8.4.2.2 Alternative iteration schemes	381
8.4.3 Applications to probabilistic fracture mechanics	382
<b>Chapter 9. Probabilistic fracture mechanics</b>	
P. M. Besuner	
9.1 Introduction	387
9.2 General discussion	390
9.2.1 Background	390
9.2.2 Deterministic foundations	390
9.3 Statistical basis for PFM	391
9.4 Engineering models and PFM	393
9.5 Numerical methods	394
9.5.1 Discussion	394
9.5.2 Monte-Carlo methodology	395
9.5.2.1 Outline of analysis procedures	396
9.5.2.2 Using the MC program	398
9.5.2.3 The basic Monte-Carlo simulation method	399
9.5.2.4 Minimum requirements to improve the MC computer program	400
9.6 PFM application examples	401
9.6.1 Optimization of safety factors with pure PFM	401
9.6.2 A failure rate prediction with pure PFM	405
9.6.2.1 The deterministic fracture mechanics problem	408
9.6.2.2 Distribution of the input random variables $C, \Delta\sigma, A_i$	408
9.6.2.3 The probabilistic analysis	410
9.6.2.4 A dependence effect on the $N$ distribution	412
9.6.2.5 Probabilistic addition of crack initiation cycles	413
9.6.3 RFC of inspectable hardware with calibrated PFM	415
9.6.3.1 General discussion of turbine disk problem	415
9.6.3.2 Simulation of stress uncertainty	417
9.6.3.3 Simulation of inspection uncertainty	419
9.6.3.4 Simulation of analyses uncertainties	419
9.6.3.5 Results of cost analysis	421
9.6.3.6 New developments in calibrated PFM/RFC	423
9.6.4 CPFPM for hard-to-inspect turbine shaft bores	423
9.6.5 Advanced computer application for general calibrated PFM	427
9.6.5.1 Discussion of baseline RFC procedure simulation	430
9.7 Concluding remarks	432
9.7.1 Summary	432
9.7.2 Future considerations	434
9.7.3 Conclusion	436
References	437
Index	461
