CONTENTS OF VOLUME 1

xiii

THEME IV: Sheet Forming of High-strength Materials

Computer-aided prediction of sheet metal manufacturing processes and its experimental verification	605
D. Lee and P. A. Stine	
On the law of strength of dual-phase plain carbon steels as natural composite materials	611
T. C. Lei and G. K. Liu	
Material inhomogeneity and surface roughening during plastic deformation	619
T. Abe and S. Nagaki	
The influence of microstructure and texture on the forming properties of a dual phase Al-killed steel (abstract only)	627
C. S. da Costa Viana and L. P. Medonça Brandao	
Localized flow (shear bands) in Al and Al-3%Mg alloy (abstract only)	629
Y. Nakayama and K. Morii	
Instability in plastic bending of thin sheet metal	631
J. L. Duncan, M. Sue-Chu and X. J. Wang	
Test methods for formability of hot rolled steel sheets	641
M. Lindberg and L. Melin	
Analysis of plastic instability in sheet-metal forming	649
G. Ferron and M. Mliha-Touati	
The effect of non-linear strain paths on the plastic properties of steels (abstract only)	657
T. Davis and W. B. Hutchinson	
Forming limits of titanium sheets	659
S. Kohara, M. Katsuta and K. Aoki	

Effect of matrix and second phase on the maximum uniform strain of metals M. Huang, J. Luo and B. He	665
Some problems about strain hardening exponent of metals M. Huang, J. Luo and B. He	673
On the prediction of forming limit diagrams for anisotropic sheets K. W. Neale and E. Chater	681
A materials model for strain softening with applications in modeling strain localization T. C. Lowe and A. K. Miller	687
Relationship between structure and mechanical behaviour of Al-10wt%Cu alloys produced by rheocasting N. A. El-Mahallawy, N. Fat-Holla and M. A. Taha	695
THEME V: Material Aspects of Fracture Mechanics in Engineering Practice	
Direct observations of the micromechanisms of fracture in polymeric solids using the scanning electron microscope D. G. Gilbert, P. W. R. Beaumont and W. C. Nixon	705
Fatigue crack propagation in viscous environments J. L. Tzou, S. Suresh and R. O. Ritchie	711
An investigation of void distribution in necking region and tensile fracture characteristics of dual-phase steel 1010 B. D. Hong and T. C. Lei	719
Fracture toughness and X-ray diffraction observation of fracture surface of ductile cast iron Z. Yajima, Y. Hirose and K. Tanaka	725
Stress and strain fields around inclusions in a plastically deforming matrix R. D. Thomson and J. W. Hancock	733

The use of J-resistance curves to characterize the effects of microstructure, strength and irradiation on fracture micromechanisms in nuclear reactor pressure tubes L. A. Simpson	739
Standard method of test for elastic-plastic fracture toughness J_{IC} recommended in Japan H. Miyamoto, H. Kobayashi and N. Ohtsuka	747
Effect of crack closure on near-threshold crack growth behaviour in a high strength Al-alloy up to ultrasonic frequencies A. F. Blom, A. Hadrboletz and B. Weiss	755
Creep crack initiation and growth in an austenitic stainless steel E. Maas and A. Pineau	763
Flaws, fracture mechanisms and Hertzian cracks in brittle solids I. Finnie and D. Dolev	771
On the Weibull model of cleavage fracture D. Qu, X. W. Wang and C. K. Tsai	779
The assessment of the fracture toughness of Fe-Ni-C alloys with austenitic and austenite-martensite structures N. J. Hurd and R. Brook	787
Fatigue crack growth retardation in an ultra high carbon steel H. Toyoda, M. Saito and S. Ohta	795
Stretch zone, ductility and toughness studies in the transition region of 1045 steel M. R. Bayoumi and M. N. Bassim	803
Study on fracture process of nitrided cases of steel 30CrMo with acoustic emission technique S. Zhang, Q. He, S. Song, W. Huang, Y. Deng and Y. Zeng	811
Finite element analysis of fatigue crack closure in compact specimen H. Nakamura, H. Kobayashi, S. Yanase and H. Nakazawa	817

The effect of intermittent rest periods at elevated temperatures on the fatigue properties of 4140 steel S. H. Kim	825
Failure predictions based on tearing instability and limit load — a parameter study L. Hodulak	833
Fatigue crack propagation and threshold of type 304 L austenitic stainless steel N. E. Atanasiu and B. R. Irimescu	841
The effects of the size of the second phase particles on the mechanical properties of a low alloy steel Y. Hong, Y. Yeh and X. Xia	849
Fracture toughness of cast iron J. Pirs	857
Fracture toughness of tungsten-free TiC- and (Ti)C,N-base hard alloys and its relation to the microstructure M. Loshak, N. Konovalenko, T. Shapoval and M. Dudkin	865
Experimental determination of hole initiation criteria at inclusions in low alloy steel and spheroidal graphite cast iron S. K. Hur, S. Y. Qing and D. François	873
A computer simulation of ductile behaviour in two steels of medium and low strength I. C. Howard and G. C. Li	881
A critical assessment of the threshold stress intensity factor B. Cina	887
A comparison of J_{Ic} , stretched zone size and crack opening displacement in a ferritic steel V. Provenzano, C. M. Gilmore, F. A. Smidt and J. R. Hawthorne	895
Assessment of ductile fracture resistance based on an engineering approach V. Kumar, M. D. German and D. F. Mowbray	903
Fatigue crack growth at high strain amplitudes C. Wüthrich and W. Hoffelner	911

Comparative study of crack resistance properties of three differently alloyed HSLA steels A. Radović, S. Sedmak and Lj. Nedeljković	919
New approaches in fracture mechanics K. B. Broberg	927
On crack problems related to welding residual stress fields in linear elastic fracture mechanics X. R. Wu and J. Carlsson	935
A distributed damage approach to combined bending and axial loading of rock beams F. Ouchterlony	943
Three methods for determining the J-R curve directly from a load displacement record S. Kaiser	951
An elastic-plastic analysis of relationships between K_I , J, and CTOD S. Pilcer and N. G. Ohlson	959
Stress hold time, stress rate and frequency effects on fracture under environment and under high temperature creep, fatigue and creep-fatigue interaction conditions T. Yokobori, A. T. Yokobori Jr. and N. Takasu	967
Creep, fatigue and environment interactions in low alloy steels A. Narumoto	983
Phenomenon and applications of the recovery-induced thermal deformation of thermoplastics T. Machida, T. Okai and F. Hamayoshi	991
Thermal fatigue of structural materials with regard to structural stresses Y. F. Balandin, A. F. Malyguin and Y. V. Yankovsky	999
High-temperature behaviour of steels with phase transformation and the simulation of quenching and welding processes T. Inoue and Z. G. Wang	1005

Production and mechanical property of clad-metals laminated with particle reinforced composite metal and ceramic powder M. Kiuchi and S. Sugiyama	1013
Fracture behaviour of pressure vessel shells plated with anticorrosive cladding V. A. Ignatov, B. T. Timofeyev and V. A. Fedorova	1023
Delayed failure of inelastic composites J. V. Suvorova	1033
Finite element analysis of thermal residual stresses in antisymmetrically laminated composites T. Hirai, A. Inoue, T. Semba and M. Hirai	1039
A three-dimensional ductile damage model applied to deep-drawing forming limits J. Lemaitre	1047
On the law of mixture in dual phase steels M. T. Ma, D. G. Wang and B. R. Wu	1055
Thermoactivation analysis of fatigue crack growth of aluminium alloys V. S. Ivanova, L. I. Maslov, S. A. Kunavin and T. Yokobori	1063
Tensile behavior and fracture characteristics of a dual-phase Fe/Mn/C steel D-Z. Wang	1069
Application of the J-integral concept to microscopic fracture mechanics M. Kikuchi and H. Miyamoto	1077
Quasi-static and impact fracture toughness of 5140 H steel after different thermal treatments J. R. Klepaczko and A. Siolecki	1085
The influence of microstructure and temperature on static and dynamic fracture initiation in heat resistant steel Z. Bilék, J. Buchar and M. Holzmann	1095

Effect of sulfur content on fracture behaviour of Ni-Cr-Mo-V steel Y. Tanaka and T. Iwadate	1101
Micromechanics of fracture in microalloyed steel A. N. Kumar and R. K. Pandey	1109
An interpretation of scatter and thickness effect of fracture toughness in the transition region N. Ohtsuka	1117
The determination of S-N curves with pre-cracked specimens J. T. Wang	1125
Influence of creep voids growth on motion of a macro-crack A. Neimitz	1131
Mechanical properties of surface coated materials A. S. Argon	1139
Press forming problems of HSLA steel sheets K. Miyauchi	1159
Mechanical behavior of energetic polymeric materials S. Nicolaides, D. Wiegand and J. Pinto	1177
Anelastic creep behaviour of RR-58 aluminium alloy at 180°C L. O. Bueno	1187
Behaviour of materials at high temperatures D. R. Hayhurst and F. A. Leckie	1195
Reliability-based fatigue-proof design of composite materials H. Ishikawa, A. Tsurui, T. Tanimoto and H. Kimura	1213
Mechanical properties of magnetic composites R. K. T. Hsieh	1221
The effect of non-linear strain paths on the plastic properties of steels W. B. Hutchinson and T. Davis	1227
Relationship between microstructure and hydrogen embrittlement in fracture mechanics aspect J. Romański	1235
