

Contents

Chapter 1 Introduction	1
1.1 Mechanical Design	1
1.2 Optimum Design	2
1.3 Some Aspects of a Specific Design Problem	3
The Basic Design Problem	3
Adequate Design Solution	3
Optimum Design Solution	4
Some Salient Characteristics of the Preceding Design Studies	11
Evolution of the Method of Optimum Design—Some Industrial Examples	11
1.4 Optimum Design by Necessity	11
1.5 High Speed Geneva Mechanism	12
1.6 An Unconventional High Speed Intermittent Motion Mechanism	15
1.7 Optimum Design of a High Speed Cam Mechanism	19
1.8 Optimal Design for Practical Mechanical Elements	20
References	21
Chapter 2 Some Mathematical Background	22
Some Approximations for Practical Functions	22
2.1 Simplicity and Accuracy Considerations	22
2.2 Mathematical Functions in Engineering	24
	ix

2.3	Conversion Processes for Function Expression	25
2.4	Errors in Conversion Processes	26
2.5	Review of Continuous and Differentiable Functions	26
2.6	Approximating Derivatives by Finite Differences	28
2.7	Some Examples of Methods for Regenerative Conversions—Curve Fitting	35
	Function Conversion to a Polynomial Series	36
	Example 2.1	38
	Function Conversion to a Simple Exponential Equation	39
	Example 2.2	42
	Function Conversion to Simple Exponential Equation Referred to Shifted Coordinate Axes	43
	Example 2.3	49
	Function Conversion by Graphical Iteration	54
	Function Conversion by Least Squares Regression Analysis	55
	Example 2.4	56
	Function Conversion for Cases of Many Variables	57
2.8	Some Examples of Methods for Degenerative Conversions—Simplification	59
	Neglect of Terms in Finite Series	60
	Example 2.5	60
	Consideration of Finite Number of Terms in Convergent Infinite Series	62
	Example 2.6	62
	Example 2.7	64
	Simplification of Complex Equations by Curve Fitting on Tabulated or Graphical Data	65
	Estimating the Effects of Relative Changes in Independent Variables for Simple Exponential Equations	67
	Some Basic Search Techniques for Automated Optimal Design	69
2.9	Single Variable Search for the Extreme	69
	Example 2.8	72
2.10	Multivariable Search for the Extreme	73
	Direction of Steepest Descent	75
	Search for the Extreme along a Ray	78

CONTENTS	xi
Example 2.9	79
Example 2.10	82
Multivariables Search Summary	83
References	85
Exercises	85
Chapter 3 Manufacturing Errors and Product Performance	88
3.1 Significant Types of Manufacturing Errors	88
3.2 Some Relationships of Stress and Acceleration to Curvature	90
3.3 Effects of Minute Displacement Errors on Curvature and on Rigid Accelerations or Theoretical Stresses	96
Example 3.1	98
Example 3.2	99
Example 3.3	102
Example 3.4	103
3.4 Effects of Minute Displacement Errors on Actual Product Performance and Product Life	105
Example 3.5	106
Surface Finish Effects	108
Contacting Surface Flaws	110
Minute Imperfections on Constraining Elements for Bodies in Motion	111
3.5 Conclusions	113
References	114
Exercises	114
Chapter 4 Material Properties and Failure Theories	116
4.1 Stress and Strength	116
Material Properties	117
4.2 Some Material Properties Related to Strength	117
Fatigue Strength of Steel	118
4.3 Some Material Properties Other than Strengths	118
Review of Combined Stress Systems	121
4.4 Unique Definition and Distribution of Stress Systems	121

4.5	Principal Stresses	122
	Significant Theories of Failure	126
4.6	Purpose and Choice of the Failure Criterion for Design	126
4.7	Static Stress Criteria for Failure	128
	Maximum Normal Stress Theory	128
	Maximum Shearing Stress Theory	129
	Distortion Energy Theory	129
	Comparison of Significant Theories with Experimental Evidence	129
4.8	Varying Stress Criteria for Failure	131
	Maximum Shearing Stress Theory of Fatigue Failure	132
	Von Mises-Hencky Criterion for Fatigue Failure	135
	Octahedral Shear Stress Criterion for Triaxial State Fatigue Failure	135
	Example 4.1	136
4.9	Surface Wear Criteria for Failure	136
	Abrasive Wear	137
	Adhesive Wear	137
	Example 4.2	138
	Surface Fatigue	139
	Example 4.3	141
	References	141
	Exercises	142
Chapter 5 Factor of Safety in Design		145
5.1	Actual Load and Load Capability for a Mechanical Element	146
5.2	Statistical Nature of Actual Load	148
5.3	Statistical Nature of Load Capability	149
5.4	Basic Relationship between Statistical Distributions for Actual Load and Load Capability of a General Mechanical Element	150
5.5	Normal or Gaussian Distribution of a Variable	153
5.6	Relationship of Actual Load λ to Load Capability L , Assuming Normal Distributions	157

CONTENTS	xiii
Example 5.1	161
Example 5.2	163
5.7 Selection of Factor of Safety Based on Percentage Estimates for Tolerances on Actual Load and Load Capability	165
Example 5.3	166
Example 5.4	167
5.8 Selection of a Factor of Safety for the Case Where the Occurrence of the Failure Phenomenon Would be Disastrous	168
Example 5.5	168
Example 5.6	169
5.9 Resolution of $(\Delta\lambda/\bar{\lambda})$ and $(\Delta L/\bar{L})$ into Components	170
Example 5.7	173
5.10 Conclusions	174
References	175
Exercises	175
Chapter 6 Some Optimization Techniques for Mechanical Elements	178
Some Basic Background for Mechanical Elements	179
6.1 Structures and Machines	179
6.2 General Characteristics of Mechanical Elements	179
6.3 Bases of Mechanical Design	184
6.4 A General Viewpoint on Typical Design Equations	184
6.5 Adequate Design	187
6.6 Optimum Design	187
6.7 Choosing the Basic Geometrical Shape	189
6.8 A General Mathematical Viewpoint on Optimum Design	190
6.9 Primary Design Equation	193
6.10 Subsidiary Design Equations	194
6.11 Constraints	194
6.12 Summary of Design Equations in Optimum Design	195
Method of Optimum Design (MOD)	197
6.13 General Description of MOD	197

Some Guidelines for Problem Formulation	197
Basic Procedural Steps for MOD	198
Types of Variables in (I.F.)	199
Types of Problems in MOD	200
General Planning, (I.F.) to (F.F.) in MOD	201
Some Features of the MOD	203
Some Limitations of the MOD	204
6.14 Case of Normal Specifications (N.S.) for Mechanical Elements	205
Example 6.1	207
6.15 Case of Redundant Specifications (R.S.) for Mechanical Elements	211
Example 6.2	214
Example 6.3	217
Example 6.4	221
6.16 Case of Incompatible Specifications (I.S.) for Mechanical Elements	225
Example 6.5	226
6.17 Modification of Boundary Values	229
6.18 Problems with More than One Primary Design Equation	230
Automated Optimal Design (AOD)	231
6.19 Basic Equation System Format for AOD	232
Basic Format for AOD Equation Systems	233
Example 6.6	234
6.20 Normalized Equation Systems for AOD	235
Unit Based Variables	235
Unit Based Equations	236
Unit Based AOD Equation System Format	237
Example 6.7	238
6.21 Penalized Optimization Quantity, (QP)	239
6.22 Minima–Maxima Equivalence	240
6.23 Good Start Point Strategy	241
Random Number Generation	242
Random Design Point Generation	243
Good Start Point Choice	244

CONTENTS	xv
OPTIGO	245
6.24 OPTIGO General Description	245
6.25 OPTIGO Main Program	247
Initial Calculations	247
Start Point for the Search	250
Stepping Increments Along a Ray from Base Point B ,	250
Converging to Minimum (QP) Along a Ray	251
Distance δ_r between Successive Base Points	252
Convergence to the Solution Point	252
6.26 SUBROUTINE PRTOUT	253
6.27 SUBROUTINE SG	254
6.28 SUBROUTINE QPCALC	255
6.29 SUBROUTINE Q5000	256
Special Functions and Final Items: F_j 's	256
6.30 SUBROUTINE EJ6000	257
6.31 SUBROUTINE RK7000	258
6.32 SUBROUTINE INPUT	258
6.33 Size Limitations for OPTIGO	260
6.34 Self-Tuning Probes for C_p	261
6.35 Application of OPTIGO	263
Mode (1): Shotgun Start and Automatic C_p	
Determinations	264
Mode (2): Specified Start Point and Automatic	
C_p Determination	264
Mode (3): Specified C_p Value and Start Point	264
Example 6.8	265
Example 6.9	267
6.36 Some Characteristics of OPTIGO in Operation	270
Characteristics of Normal Convergence by OPTIGO	270
Remedial Action for Unusual Cases	271
Example 6.10	271
6.37 Special Refinements in OPTIGO	274
Recommendation for General Application of OPTIGO	275
References	275
Exercises	277

Chapter 7 Optimal Design of Simple Mechanical Elements	280
7.1 Tensile Bar in Dynamic Loading	280
7.2 Torsion in Simple Cylindrical Bars	284
7.3 Simple Torsion Bar for Minimum Weight	286
7.4 Practical Deviations from Simple Geometry	290
7.5 Practical Torsion Bar for Minimum Weight	296
7.6 Torsion Shaft for Minimum Cost	305
7.7 Torsion Shaft for Minimum Dynamic Torque	309
Initial Formulation	310
Exploratory Calculations	312
Final Formulation	312
Variation Study	314
General Guidelines for Flow Chart Synthesis in MOD	317
Example 7.1	319
7.8 Dynamic Shaft in Combined Loading, (N.S.)	322
Statement of the Problem	322
Optimum Design of the Torsion Bar Spring	325
Example 7.2	333
7.9 Dynamic Shaft in Combined Loading, (R.S.)	334
Final Formulation	335
Variation Study	336
Flow Chart Derivation	339
Numerical Application	340
Exercises	341
General Problem Statement	341
Chapter 8 Optimal Design of Complex Mechanical Elements	364
8.1 Optimal Design of Helical and Spur Gears	365
Initial Formulation	366
Exploratory Calculations	380
Approach 1 (F.F.)	382
Strategy for Simplification of the Variation Study	390
Simplified (F.F.), Approach 2	392
Variation Study with P_{nd} and N_p Constant	393
Calculation Flow Chart	395
Example 8.1	398
Common Input Values for Problems A through E	399

CONTENTS	xvii
8.2 Optimal Design of Helical Springs	401
Basic Background Information	401
Objectives for Optimum Design	408
Boundary Conditions for the Triple Optimization Problem	409
Initial Formulation for Triple Optimization Problem	410
Exploratory Calculations	410
Planning the Attack	412
Final Formulation for Triple Optimization Problem	412
Variation Study for Triple Optimization Problem	414
Flow Chart for Triple Optimization Problem	418
Example 8.2	423
Common Input Data for Five Problems	423
Solutions to Optimization Problems	423
8.3 Optimal Design of Capillary-Compensated Hydrostatic Journal Bearings	424
Some Nomenclature for Bearing Design	425
Objective for Optimal Design	425
Basic Equations for Design Use	427
Criterion Function for AOD	432
Constraints and Specified Items	432
Analysis for a Design State Point	432
Unit Based Variables	433
AOD Equations for Use in OPTIGO	434
Programming of Equations in OPTIGO	435
Example 8.3	441
References	445
Exercises	446
Gearset Design Problems	446
Helical Compression Spring Design Problems	448
Hydrostatic Journal Bearing Design Problems	449
Other Complex Mechanical Element Design Problems	450
Design of a Cylindrical Roller Bearing	450
Hydrodynamic Journal Bearing Design	453

Varying Motion Mechanisms	456
Geneva Mechanism Design	457
Selection of Standard Bearing for Cam Follower	460
Gearbox Design	464
Brake Design	466
Pivoted Shoe Brake Design Problem	468
Pivoted Shoe Brake Design Application	471
Appendix A Some Basic Nomenclature for MOD and AOD	473
A.1 Method of Optimum Design	473
General Notation with MOD	473
Exploratory Calculation Notation for MOD	474
A.2 Automated Optimal Design by OPTIGO	474
Tabulated Descriptions in Text	474
Some Other Items	474
Appendix B Optigo Fortran IV Listing and Sample Printouts	476
B.1 Fortran IV Listing of OPTIGO	477
B.2 Optigo Printout Samples from Example 6.9(b) of Chapter 6	483
Appendix C An Acceptable-Point Algorithm for Design Optimization	488
C.1 Nomenclature	488
C.2 Introduction	489
C.3 Descent Methods for Unconstrained Function Minimization	491
Conjugate Directions	492
C.4 Operations of the GCG–GSAP Algorithm	494
GCG Algorithm	495
GSAP Univariate Algorithm	495
C.5 Optimal Design of a Torsion Bar Spring	496
Index to Computer Program of Figure C.1	503
References	506
Index	509
