Contents

PART 1 - GENERAL LECTURES

1. Applied Thermoelasticity
   Bruno A. Boley 3

2. Mechanics and Traffic Theory
   Denos C. Gazis 17

3. New Initiatives in Engineering Computer Software Sharing
   N. Perrone 31

4. Fluid Mechanics Applications to Problems of Wind Forces on Structures and Air Pollution
   J. E. Cermak 37

5. Cavitation and Cavitation Damage
   Milton S. Plesset 55

6. Viscoelasticity and Industrial Problems
   E. H. Lee 71

PART II - FLUID MECHANICS

JETS and AERODYNAMICS

7. Development of a Liquid Jet Under Gravity
   Xavier J.R. Avula 85

8. Mixing of Coaxial Jets in a Confined Tube
   Carlo Scaccia and Lawrence A. Kennedy 95

9. Neighboring Body Effects on Bluff Body Form Drag
   Wm. J. Kelnhofer 111

10. Neighboring Body Effects on Bluff Body Tipping Moment
    Wm. J. Kelnhofer 125

NON-STEADY FLOW AND STABILITY OF FLUIDS

11. Non-Steady, Stratified Couette Flow Between Concentric Rotating Spheres
    P. R. Smith and J. C. Britton 141

12. A New Method of Solving One-Dimensional Unsteady Flow Equations and its Application to Shock Wave Stability in Sonic Inlets

Assem A. Fathy and Edward Lumsdaine 153

13. Stability of Parallel Flow of a Dusty Gas in an Annulus

Michael O. Moorman, Daniel F. Jankowski and John M. Gersting, Jr. 167

14. Wall Effects on Benard Convection in Porous Media

M. L. Lawson and Wen-Jei Yang 179

TURBULENCE and WAVE PROPAGATION

15. Study of Shock Wave and Turbulent Boundary Layer Interaction Using the Energy Integral Equation

Edward Lumsdaine 191

16. Incompressible Turbulent Boundary Layer Separation From a Curved Axisymmetric Body

C. H. Yi and C.E.G. Przirembel 203

17. Viscous and Heat-Conduction Effects on Weak Spherical Explosions

Maurice L. Rasmussen and Jerome G. Lake 217

18. Planar Nozzle Discharge Coefficients

Tadeusz M. Drzewiecki 231

INTERNAL FLOW

19. Variational Analysis of the Flow Development in the Entrance Region of Circular Tubes and Parallel-Plate Channels

L. N. Tao and S. D. Gupta 247

20. MHD Flow in Variable-Area Conducting Rectangular Ducts

John S. Walker and G.S.S. Ludford 265

21. Poiseuille Flow of a Rarefied Gas in a Rectangular Duct

D. R. Jeng and S. T. Wu 277

22. Analysis of Rarefied Gas Flow Through An Arbitrary Cross Section by the Finite Element Method

J. T. Oden, S. T. Wu and T. J. Chung 289

PART III - SOLID MECHANICS

ELASTICITY

23. Stability and Postbuckling Behavior of Hyper-Elastic Bodies at Finite Strain by the Finite Element Method

D. W. Sandidge and J. T. Oden 305

24. Stability Criteria for Elastic Materials

Kenneth N. Sawyers and Ronald S. Rivlin 321

25. Axially Loaded Rigid Cylindrical Body Embedded in an Elastic Half-Space

S. Suriyamongkol, P. Karasudhi and S.L. Lee . . . 333

26. Stress Singularities Associated with a Crack Inclined to a Bi-Material Interface

S.L. Pu, R.D. Scanlon and M.A. Hussain 349

BEAMS and FRAMES

27. Dynamic Stability of a Nonlinear Beam Subjected to Both Longitudinal and Transverse Excitation

Henry R. Busby, Jr. and Victor I. Weingarten . . . 367

28. Inertia Properties of Curved Twisted Space Beam Elements

M. F. Massoud and A. Boudreau 383

29. Matrix Analysis of Beam Gridworks

P. G. Kirmser and K. K. Hu 397

30. Orthogonality and Normalizing Conditions of Normal Modes of Three-Dimensional Framed Structures

T. C. Huang and Charles C.L. Lee 411

DYNAMICS

31. A Direct Method of Stability Analysis for Elastic Circulatory Systems

R. H. Plaut and K. Huseyin 425

32. Non-Linear Oscillations with Small Speed-Dependent Damping

Maurice L. Rasmussen 437

33. The Identifying Characteristics of a Quasi-Dynamic System

Albert B. Ku 449

34. An Exact Piecewise Analysis of Large Viscously Damped Structural Systems
J. O. Hallquist and V. W. Snyder 457

STABILITY

35. The Dynamics and Stability of Composite Shells
John F. Oyler and Clive L. Dym 475

36. Axially Compressed Cylindrical Shells with Longitudinal Stiffeners
James Ting-Shun Wang and Yu-Jyi Lin 489

37. Column Instability Under Nonconservative Forces, with Internal and External Damping--Finite Element Using Adjoint Variational Principles
Julian J. Wu 501

38. The Effect of Axial Resonance on the Dynamic Stability of Thin-Walled Columns
L. R. Koval and P. Hagedorn 515

SHELLS

39. Forced Axisymmetric Response of Elastic Spherical Shells
Yu-Chung Lee and Sunder H. Advani 533

40. A Perturbation Method for the Nonlinear Analysis of Cable Networks
Sidney Shore and Djavad Modjtahedi 549

41. Large Deformations of Cord-Reinforced Multi-layered Axisymmetric Shells
Farhad Tabaddor 565

42. Dynamic Response of Laminated Composite Circular Cylindrical Shells with Freely Supported or Clamped Edges
O. B. Abhat and M. W. Wilcox 579

WAVE PROPAGATION

43. Dynamic and Quasi-Static Extension of an Interface Flaw
L. M. Brock and J. D. Achenbach 595

44. Shear Waves in a Wedge Due to a Moving Load
Lester W. Schmerr, Jr. 609

45. On the Cartesian Ovals Which Reflect and/or Refract a Circular Wave Front Into Two Circular Wave Fronts
T.C.T. Ting and S.C. Chou 621

NUMERICAL METHODS

46. Modification of Linear Membrane Theory for Predicting Inflated Tire Shapes
Alex Y.C. Lou 637

47. Mixed Finite-Difference Scheme for a Class of Linear and Non-Linear Structural Mechanics Problems
Ahmed K. Noor 657

48. A Finite Element Application to Strain Gage Data Reduction
Cecil R. Rogers 675

49. A Refined Finite Element Analysis of Folded Plate Structures
G. Attar-Hassan and S.S.F. Ng 685

VIBRATIONS

50. Dynamics of Articulated Vehicles in Braking
S. L. Chiang and G. A. Cornell 705

51. A Unified Method for Determination of Fundamental Natural Frequency of Orthotropic Plate With Arbitrary Boundary
J.C.M. Yu and W. A. Foster, Jr. 721

52. Nonlinear Response of Plates Subjected to Inplane and Lateral Pressure Pulses
Lawrence J. Knapp 733

53. Vibration of Annular Plates With Simply Supported Edge-Beams
Richard J. Stuart and John F. Carney, III 745

STRESS ANALYSIS

54. Torsional and Anti-Plane Strain Delamination of an Orthotropic Layered Composite
E. P. Chen and G. C. Sih 763

55. Series Analysis of Cylindrical Shells - New Look at an Old Problem
R. Richard Avent 777

56. On Stress-Concentration Analysis of Laminated Composite Plates
Y. C. Pao and T. A. Huang 791

57. Inflation of an Ellipsoid Nonlinear Membrane with Linearly Varying Pressure
William W. Feng 807

PLASTICITY

58. Effects of Coupled Thermoplasticity with Applications to a Hollow Sphere
Herman A. Nied and Steven C. Batterman 823

59. The Incremental Theory of Three Dimensional Transient Thermoelastoplasticity - Formulation and Solution
T. J. Chung and G. Yagawa 843

60. Elastic-Plastic Analysis of a Wedge by a Perturbation Method
Martin A. Eisenberg and W. Raymond Cribb. . . . 857

EXPERIMENTAL METHODS

61. Acoustic Emission and Discontinuous Yielding
William F. Hartman. 875

62. Fatigue Life Under Random Loading with Varying Mean Stress and RMS Value
H. Nowack and B. Mukherjee 887

63. An Approximate Solution for Bending of Anistropic Laminated Plates
R.L. Sierakowski, C.T. Sun and Patrick W. Sun 899

VISCOELASTICITY

64. A Laminate Beam Theory for Constrained-Layer Damping
B. E. Sandman 913

65. Flutter-Divergence Transition Criteria in Certain Viscoelastic Polygenic Systems
R. N. Kapoor and H.H.E. Leipholz 929

66. Studies on the Wave Propagation in Filamentary Composite Materials
E. R. Jones and R. L. Sierakowski 943

67. A Numerical Procedure for the Analysis of Structures Supported by Viscoelastic Foundations
E. C. Ting and H. T. Yang 959

PLATES

68. Finite-Element Formulations for Elastic Plates by General Variational Statements with Discontinuous Fields
S. Nemat-Nasser and K. N. Lee 979

69. Minimal Design of Sandwich Plates Obeying Mises' Criterion
Robert Reiss 997

70. A Solution for the Elastic-Plastic Bifurcation Load
Anthony N. Palazotto 1011

71. Large Oscillations of an Orthotropic Annulus
Chi-lung Huang and H. K. Woo 1027
