|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b><i>Mechanism Motion</i></b>                      | <b>3</b>  |
| 1.1      | Introduction  | 3         |
| 1.2      | Link Definition                                     | 4         |
| 1.3      | Common Linkages                                     | 5         |
| 1.4      | Scale Factors                                       | 7         |
| 1.5      | Slider Cranks                                       | 8         |
| 1.6      | Examples of Four-Bar Linkage Motion                 | 10        |
| 1.7      | Four-Bar Linkages                                   | 13        |
| 1.8      | Dead Positions                                      | 15        |
| 1.9      | Kinematic Synthesis of a Four-Bar Linkage           | 17        |
| 1.10     | Coupler Curves                                      | 20        |
| 1.11     | Eccentric Cams                                      | 22        |
| 1.12     | Kinematic Analysis of Mechanisms                    | 24        |
| <br>     |   |           |
| <b>2</b> | <b><i>Vector Usage</i></b>                          | <b>43</b> |
| 2.1      | Scalar Quantities                                   | 43        |
| 2.2      | Introduction to Vector Quantity                     | 44        |
| 2.3      | Vector Quantities                                   | 44        |
| 2.4      | Vector Representation                               | 44        |
| 2.5      | Vector Addition                                     | 45        |
| 2.6      | Vector Polygon                                      | 48        |
| 2.7      | Adding Parallel Vectors                             | 49        |
| 2.8      | Angular Displacement                                | 49        |
| 2.9      | Vector Components                                   | 51        |
| 2.10     | Vector Subtraction                                  | 53        |
| 2.11     | Multiplication and Division of a Vector by a Scalar | 55        |

|          |   |            |
|----------|---|------------|
| <b>3</b> | <b><i>Motion Concept</i></b>                          | <b>66</b>  |
| 3.1      | Relative Motion                                       | 66         |
| 3.2      | Plane Motion  | 67         |
| 3.3      | Plane Translation                                     | 67         |
| 3.4      | Plane Rotation  | 68         |
| 3.5      | Plane Combined Motion                                 | 69         |
| 3.6      | Radian  | 70         |
| 3.7      | Angular Displacement                                  | 71         |
| 3.8      | Relative Angular Movement                             | 76         |
| 3.9      | Linear Displacement                                   | 80         |
| 3.10     | Relative Linear Movement                              | 81         |
| <br>     |   |            |
| <b>4</b> | <b><i>Velocity</i></b>                                | <b>91</b>  |
| 4.1      | Introduction  | 91         |
| 4.2      | Average Angular Velocity                              | 91         |
| 4.3      | Instantaneous Angular Velocity                        | 93         |
| 4.4      | Angular Velocity                                      | 95         |
| 4.5      | Linear Velocity                                       | 98         |
| 4.6      | Linear Velocity Related to Angular Velocity           | 99         |
| 4.7      | Velocity Components                                   | 103        |
| 4.8      | Instant Center of Rotation                            | 105        |
| 4.9      | Locating the Instant Center of a Link                 | 107        |
| 4.10     | Determining Velocity by Instant Center                | 109        |
| 4.11     | Relative Linear Velocity                              | 113        |
| 4.12     | Pure Rolling  | 114        |
| 4.13     | Sliding   | 118        |
| 4.14     | Relative Velocity Between Two Points on the Same Body | 126        |
| <br>     |   |            |
| <b>5</b> | <b><i>Acceleration</i></b>                            | <b>145</b> |
| 5.1      | Introduction  | 145        |
| 5.2      | Angular Acceleration                                  | 145        |
| 5.3      | Linear Acceleration                                   | 147        |
| 5.4      | Normal Acceleration                                   | 149        |
| 5.5      | Normal and Tangential Acceleration                    | 151        |
| 5.6      | Gear Accelerations                                    | 153        |
| 5.7      | Linear Acceleration for Fixed Points on a Link        | 156        |
| 5.8      | Applications of the Relative Acceleration Equation    | 157        |
| 5.9      | Accelerations for Bodies in Pure Rolling              | 162        |
| 5.10     | Coriolis Acceleration                                 | 165        |
| <br>     |   |            |
| <b>6</b> | <b><i>Cams</i></b>                                    | <b>183</b> |
| 6.1      | Introduction  | 183        |
| 6.2      | Classification of Cams                                | 183        |
| 6.3      | Displacement Diagram                                  | 186        |
| 6.4      | Cam Nomenclature                                      | 187        |

|          |   |            |
