## INTRODUCTION: GENERAL DESCRIPTION OF ELECTRON COLLISION PROCESSES WITH ATOMIC PARTICLES

0.1	The Concept of Cross Section	1
0.2	Interaction of Electrons with Atoms or Atomic Ions	4
0.3	Some Information about Atomic Structure	10
0.4	General Characteristics of the Cross Section Calculation Methods	16
0.5	Collision Processes of Electrons with Molecules and Molecular Ions	18

## SCATTERING OF A PARTICLE BY A POTENTIAL

1.1	The Wave Function: Scattering Amplitude	22
1.2	Partial Waves Expansion	27
1.3	The Jost Function and its Properties	35
1.4	Scattering of a Slow Particle by a Short Range Central Field: Resonances	41
1.5	Effect of a Long-range Tail in the Potential which Falls as $r^{-4}$	47
1.6	Effect of the Coulomb Attractive Potential on Slow Particle Scattering	52
1.7	Scattering by Two Short-Range Nonoverlapping Potentials	56
1.8	Scattering by an Electric Dipole	59
1.9	Scattering of Fast Particles: Various Approximations	62

SCATTERING OF A PARTICLE WITH SPIN:  
POLARIZATION PHENOMENA

2.1	Amplitude Matrix	67
2.2	The Density Matrix Formalism	73
2.3	Expressions for Observable Quantities	76
2.4	Polarization of a Beam of Particles	78
2.5	Scattering of a Partly-Polarized Beam	79

THE SIMPLEST TWO-CHANNEL SYSTEM

3.1	Formulation of the Problem: Boundary Conditions: S-matrix	82
3.2	Elastic Scattering Below the Threshold: Resonances	88
3.3	Cusps	90
3.4	Cross Sections Above the Threshold	92
3.5	Effect of an Attractive Coulomb Field	95

COLLISIONS OF ELECTRONS WITH ATOMS AND IONS:  
GENERAL THEORY

4.1	Wave Function of the System: Amplitudes and Cross Sections	98
4.2	The Total Spin Representation: Separation of the Spin Variables	101
4.3	Reduction of the Many-Channel Problem	103
4.4	Partial Waves: The Total Angular Momentum Representation	107
4.5	The Jost Matrix and Related Matrices	109
4.6	Effects of Closed Channels	110
4.7	Correlation and Polarization Phenomena	114

APPROXIMATE METHODS FOR ELECTRON-ATOM COLLISIONS:  
CROSS SECTION CALCULATIONS

5.1	Methods for the Approximate Solution of the Many-Channel Problem	119
5.2	The Born Approximation and its Modifications	124
5.3	The Glauber Approximation	131
5.4	Classical Mechanics (Binary Approximation)	133

ELASTIC AND INELASTIC SCATTERING OF ELECTRONS  
BY ATOMS AND POSITIVE IONS

6.1	Hydrogen	136
6.2	Helium	150

6.3	Alkali Metal Atoms (Li, Na, K, Cs)	159
6.4	Other Atoms: References and Comments	168
6.5	Collisions of Electrons with Positive Ions	170

## IONIZATION

7.1	Threshold Behavior of the Ionization Cross Section	180
7.2	The Differential Cross Sections: General Relations	183
7.3	Ionization Through Excitation of Autoionizing States: Postcollision Interaction	184
7.4	Hydrogen	185
7.5	Helium	188
7.6	Total Ionization Cross Sections for Various Atoms	196

## ROTATIONAL AND VIBRATIONAL EXCITATION OF MOLECULES

8.1	Excitation of Rotation of Two Atom Molecules Below the Vibrational Threshold	199
8.2	Excitation of Vibrations and Combined Rotational- Vibrational Transitions	204

## DISSOCIATION OF MOLECULES

9.1	Dissociative Attachment	220
9.2	Dissociative Recombination	226
9.3	Dissociation Through Electronic Excitation	227
