<b>1</b>	<b>Introduction</b>	<b>1</b>
	<i>I. G. Brown</i>	
<b>2</b>	<b>The Plasma Physics of Ion Sources</b>	<b>7</b>
	<i>I. G. Brown</i>	
1	Density, Temperature, and Distribution Functions,	7
1.1	Percentage Ionization,	8
1.2	Distribution Functions,	8
2	Sheaths and Electric Fields,	11
2.1	Debye Length,	12
2.2	Charge Neutrality,	12
3	Collisions,	13
4	The Plasma Frequency,	14
5	Magnetic Field Effects,	15
5.1	Cyclotron Radius,	15
5.2	Cyclotron Frequency,	16
6	Plasma Pressure,	16
7	Particle Flow,	17
8	Ionization,	17
9	Multiple Ionization,	19
	References,	21
<b>3</b>	<b>Ion Extraction</b>	<b>23</b>
	<i>R. Keller</i>	
1	The Physics of Ion Extraction,	23
2	First-Order Treatment of Ion Extraction,	27
3	Beam Quality Parameters,	30

4	Refined Treatment of Ion Extraction,	35
5	Voltage Scaling Laws for Beam Current and Brightness,	39
6	Special Extraction Systems,	45
	References,	50
<b>4</b>	<b>Beam Transport</b>	
	<i>A. J. T. Holmes</i>	
1	Beam Optics in the Absence of Collective Effects,	51
1.1	Busch's Theorem and the Paraxial Ray Equation,	55
1.2	Solutions of the Paraxial Ray Equation and the Matrix Method,	58
1.3	Focusing of Ion Beams,	59
1.3.1	Electrostatic Lenses,	60
1.3.2	Magnetic Lenses,	62
1.3.2.1	The Solenoid,	62
1.3.2.2	The Quadrupole,	63
1.3.2.3	Combination of Quadrupole Lenses,	65
1.3.2.4	The Magnetic Sector Lens,	66
1.4	Beam Transport Channels,	69
2	The Transport of Laminar Beams with Self Fields,	70
2.1	Motion of an Ion Beam without External Fields,	71
2.2	Self Fields and the Paraxial Ray Equation,	73
2.3	Beam Propagation Using an Axial Magnetic Field,	74
3	Space-Charge Neutralization of Ion Beams,	75
3.1	Neutralization of Positive Ion Beam Charge,	76
3.2	A Simple Model for a Positive Ion Beam Plasma,	77
3.3	Neutralization of Negative Ion Beams,	80
3.3.1	A Simple Model of Negative Ion Beam Neutralization,	86
3.4	The Effect of Magnetic Fields,	88
4	Nonlaminar Beams,	91
4.1	Liouville's Theorem,	91
4.2	Emittance and Brightness,	92
4.3	Measurement of Beam Emittance,	95
4.4	Emittance and Beam Propagation,	95
4.5	The Kapchinskij-Vladimirskij Distribution,	99
4.6	Emittance Growth and Nonlinear Optics,	100
5	The Beam Envelope of a Drifting Beam,	101
5.1	Solutions of the K-V Equation,	103
	References,	105

<b>5</b>	<b>Computer Modeling</b>	
	<i>P. Spädtke</i>	
1	History,	110
2	Techniques of Ray Tracing Programs,	112
2.1	Poisson Equation,	115
2.2	Cathode Simulation,	116
2.3	Plasma Simulation,	118
2.4	Ray Tracing,	119
3	Representation of Results,	120
4	A 2D Example,	120
4.1	Ion Beam Extraction,	121
4.2	Drift Space,	121
4.3	Acceleration,	122
5	A 3D Example,	122
	Appendix,	132
	References,	133
<b>6</b>	<b>Some Basic Ion Sources</b>	
	<i>I. G. Brown</i>	
1	Sources Made from Bayard-Alpert Gauges,	137
2	Other Electron-Bombardment Sources,	139
3	Metal Ion Sources,	142
4	Microwave Ion Sources,	145
5	Miscellaneous Sources,	148
	References,	149
<b>7</b>	<b>High-Current Gaseous Ion Sources</b>	
	<i>R. Keller</i>	
1	Sources with Single-Stage Discharge,	153
2	Sources with Two-Stage Discharges,	158
3	Multiply Charged Ions,	161
4	Ions from Elements with Low Vapor Pressure,	162
5	Outlook,	164
	References,	164

**8 PIG Ion Sources***B. F. Gavin*

- 1 Background, 167
- 2 Characteristics of Cold Cathode PIGs, 169
- 3 Characteristics of Hot Cathode PIGs, 171
- 4 PIG Discharge Mechanisms, 171
- 5 High Charge State Ion Production, 175
- 6 Operating Parameters, 176
- 7 Metallic Ion Production, 179
- 8 PIG Ion Beam Characteristics, 182
- 9 Conclusion, 183
- References, 183

167

**9 The Freeman Ion Source***D. Aitken*

- 1 The Early Freeman Source, 188
- 2 Freeman Sources in Laboratory Scale Separators and Early Implanters, 190
  - 2.1 The Original Harwell Design, 190
  - 2.2 Source Variants, 190
  - 2.3 The Harwell Isotope Separator as an Implanter, 190
  - 2.4 The Freeman Source in Commercial Ion Implanters, 194
- 3 Source Characteristics, 194
  - 3.1 Arc Current Control, 194
  - 3.2 Nonuniformity of the Arc Discharge along the Length of the Filament, 196
- 4 Freeman Source Variants, 199
  - 4.1 Magnetic Bottle, 199
  - 4.2 Electrostatic Electron Reflectors, 199
  - 4.3 AC Filament, 199
  - 4.4 Source Magnet Control, 200
  - 4.5 Other Variants, 201
- 5 Ion Beam Extraction, 201
- 6 Arc Control, 202
- 7 Feed Materials, 203
- 8 Summary, 205
- References, 205

187

**10 Electron Cyclotron Resonance/Ion Sources***Y. Jongen and C. M. Lyneis*

- 1 A Brief History of the Development of ECR Sources, 208
- 2 Basic Principles of ECR Sources, 211
  - 2.1 Ionization by Electron Impact, 211
  - 2.2 Magnetic Confinement, 212
  - 2.3 ECR Heating, 213
  - 2.4 Losses by Charge Exchange, 214
  - 2.5 Ion Confinement, 215
  - 2.6 The Plasma Injector Stage, 215
  - 2.7 Gas Recirculation in ECR Sources, 216
- 3 World ECR Sources, 216
- 4 Illustration of a Typical ECR Source: The LBL ECR, 219
  - 4.1 Source Design, 219
  - 4.2 LBL ECR Performance, 222
  - 4.3 ECR Source Beams from Solids, 222
  - References, 227

207

**11 Microwave Ion Sources***N. Sakudo*

- 1 Plasma Generation by Microwave Discharge in a Magnetic Field, 229
- 2 Some Practical Considerations, 230
- 3 Versatility of Beam Extraction, 233
  - 3.1 Large Cross-Sectional Beam Extracted through a Multiaperture Lens, 233
  - 3.2 Slit-Shaped Ion Beam for Ion Implanters, 235
  - 3.3 Further Improvements in Slit-Shaped Ion Beams, 237
    - 3.3.1 Increasing Ion Extraction Voltages, 237
    - 3.3.2 Increasing Extracted Currents, 238
  - 3.4 Compact Microwave Ion Sources, 239
- 4 Diversity of Available Ion Species, 240
- 5 Summary, 243
- References, 243

229

**12 Electron Beam Ion Sources***E. D. Donets*

- 1 Physical Basis and Mode of Operation of EBIS, 245
  - 1.1 Physical Basis, 246

245

1.2	Basic Operation of the Electron Beam Method of Producing Highly Charged Ions, 250	
1.2.1	Injection of Ions into the Trap, 251	
1.2.2	Containment of the Ions: Ionization, 254	
1.2.3	Ion Extraction, 256	
1.2.4	Some Remarks about the Collective Model, 257	
2	Types of EBIS Construction, 258	
2.1	Construction of KRION-2, 259	
2.2	Construction of CRYEBIS, 260	
3	Experimental Development of EBIS, 262	
3.1	Capacity of the Ion Trap, 262	
3.2	Containment of Ions in the Beam, 265	
3.3	Production of Highly Charged Ions, 266	
3.4	Other Experimental Results, 267	
4	Short Review of Projects and Devices, 269	
5	Some Special Applications, 271	
5.1	Ionization of Positive Ions by Electron Impact, 272	
5.2	Dependence of Nuclear Properties on the Ion Charge State, 274	
5.3	Spectroscopy of Slow Highly Charged Ions on Solid Surfaces, 276	
6	Problems and Prospects of EBIS Development, 278	
	References, 278	

**13 Beam-Plasma Ion Sources***J. Ishikawa*

1	Ion Source Characteristics, 282	
2	Source Construction, 283	
2.1	Ion Extraction and Electron Gun Region, 286	
2.2	Drift Space, 286	
2.3	Electron Beam Collector Region, 286	
3	Beam-Plasma Discharge, 287	
3.1	Beam-Plasma Discharge Due to Hydrodynamic Instability, 288	
3.2	Quasilinear Relaxation, 290	
4	Ion Extraction with Ion Space-Charge Compensation, 291	
4.1	Relaxation of the Space-Charge Limitation of Extractable Ion Current, 292	
4.2	Extracted Ion Current, 294	
5	Summary, 296	
	References, 296	

<b>14</b>	<b>Laser Ion Sources</b>	<b>299</b>
	<i>R. H. Hughes and R. J. Anderson</i>	

1	Background, 299	
2	Laser Plasmas Used as an Ion Source, 301	
3	Performance of Laser Ion Sources, 303	
3.1	The Dubna Laser Sources, 303	
3.2	The Arkansas Experiments, 306	
4	Future of Laser Ion Sources, 309	
	References, 310	

<b>15</b>	<b>Liquid Metal Ion Sources</b>	<b>313</b>
	<i>L. W. Swanson and A. E. Bell</i>	

1	Principle of Operation, 314	
2	Source Characteristics, 318	
2.1	Total Energy Distribution and Angular Intensity of the LMIS, 320	
2.2	Virtual Source Size of the LMIS, 324	
3	Alloy Sources, 325	
4	Applications of Liquid Metal Ion Sources, 326	
5	Summary, 328	
	References, 329	

<b>16</b>	<b>The Metal Vapor Vacuum Arc Ion Source</b>	<b>331</b>
-----------	--	------------

*I. G. Brown*

1	The Metal Vapor Vacuum Arc Plasma, 332	
2	Source Design, 334	
3	Embodiments, 339	
3.1	MicroMEVVA, 339	
3.2	MEVVA II, 339	
3.3	MEVVA III, 343	
3.4	MEVVA IV, 343	
4	Source Performance, 343	
4.1	Ion Species, 343	
4.2	Beam Current, 345	
4.3	Extraction Voltage, 347	
4.4	Beam Noise, 346	
4.5	Duty Cycle, 346	
4.6	Source Lifetime, 348	
4.7	Charge State Distribution, 349	

5 Other Versions, 351	
6 Future Directions, 353	
References, 353	
<b>17 Negative Ion Sources</b>	<b>355</b>
<i>K. N. Leung</i>	
1 Surface-Produced Negative Ion Sources, 355	
1.1 Sputtering-type Negative Ion Sources, 355	
1.2 Plasma Surface Conversion Negative Ion Sources, 356	
2 Volume-Produced Negative Ion Sources, 359	
2.1 Duoplasmatron, Magnetron, and Penning-type H <sup>-</sup> Sources, 359	
2.2 Multicusp Negative Ion Sources, 362	
2.3 Volume-Produced Heavy Negative Ion Sources, 364	
References, 368	
<b>18 Light-Ion Sources for Inertial Confinement Fusion</b>	<b>371</b>
<i>R. A. Gerber</i>	
1 Background, 371	
2 Passive Sources, 373	
2.1 Flashover Sources, 373	
2.2 Cryogenic-Anode Sources, 377	
2.3 EHD-Driven Liquid Sources, 378	
3 Active Sources, 383	
3.1 XUV-Driven Sources, 384	
3.2 Gas-Breakdown Plasma Anode, 385	
3.3 BOLVAPS/LIBORS Lithium Source, 387	
3.4 Other Research on Active Lithium Sources, 390	
4 Summary, 391	
References, 393	
<b>19 Ion Sources for Pulsed High-Brightness Beams</b>	<b>397</b>
<i>S. Humphries, Jr., C. Burkhardt, and L. K. Len</i>	
1 Emittance and Brightness, 398	
2 Principles of Grid-Controlled Ion Extractors, 400	
3 Limiting Factors, 403	
4 Arc Plasma Sources for Pulsed Ion Beams, 406	
5 Observation of Grid-Controlled Extraction, 409	
6 Flux Measurements, 412	

7 Measurements of Beam Species and Emittance, 414	
8 Conclusions, 417	
References, 418
