

## CONTENTS

Preface . . . . .	ix
<b>1. The Equations of Magnetohydrodynamics</b>	
1.1 Introduction . . . . .	1
1.2 The electrodynamic equations . . . . .	7
1.3 The thermodynamic equations . . . . .	12
1.4 The hydrodynamic equations . . . . .	16
1.5 The energy equation . . . . .	18
1.6 Boundary conditions . . . . .	22
1.7 Kinematics . . . . .	28
Problems 1 . . . . .	33
<b>2. Electromagnetic Induction</b>	
2.1 The magnetic Reynolds number . . . . .	35
2.2 Diffusion of field in solid conductors . . . . .	37
2.3 Convection of magnetic flux by a perfect conductor . . . . .	43
2.4 Intermediate cases . . . . .	48
2.5 Notes on the vector potential . . . . .	57
Problems 2 . . . . .	62
<b>3. Homogeneous Dynamos</b>	
3.1 Formulation of the problem . . . . .	65
3.2 Simple conclusions . . . . .	69
3.3 Negative results . . . . .	75
3.4 Positive results . . . . .	85
3.5 Heuristic results . . . . .	95
Problems 3 . . . . .	97

### **4. Hydromagnetic Equilibria and Force-free Fields**

4.1 Preliminaries . . . . .	101
4.2 Governing equations . . . . .	102
4.3 Illustrations . . . . .	105
4.4 Force-free fields . . . . .	108
4.5 Variational results . . . . .	110
4.6 Axisymmetric equilibria . . . . .	113
4.7 Magnetic stars . . . . .	115
Problems 4 . . . . .	118

### **5. Alfvén Waves**

5.1 Transverse wave motion in a perfect fluid . . . . .	121
5.2 The effect of dissipation: Model 1 . . . . .	125
5.3 The effect of dissipation: Model 2 . . . . .	131
5.4 The limit of zero magnetic Prandtl number . . . . .	135
Problems 5 . . . . .	138

### **6. Boundary Layers**

6.1 The Hartmann layer . . . . .	144
6.2 The stability of the Hartmann layer . . . . .	151
6.3 Magnetohydrodynamic Blasius flow . . . . .	161
Problems 6 . . . . .	169

### **7. The Hydromagnetics of the Laboratory**

7.1 Basic considerations . . . . .	171
7.2 Hartmann flow . . . . .	172
7.3 Duct flow at large Hartmann numbers . . . . .	181
7.4 Alfvén radiation . . . . .	190
7.5 Bénard convection . . . . .	194
Problems 7 . . . . .	208

### **8. Hydromagnetic Stability: Theory**

8.1	The energy method . . . . .	213
8.2	Computation of $\delta^*W$ . . . . .	217
8.3	Choice of displacement . . . . .	228
	Problems 8 . . . . .	232

### **9. Hydromagnetic Stability: Applications**

9.1	The linear pinch . . . . .	235
9.2	Interchange instability . . . . .	244
9.3	Stability criteria for the general linear pinch . . . . .	247

### **Appendix**

Table 1: The principal magnetohydrodynamic parameters . . . . .	255
Table 2: Approximate values of some commonly occurring parameters . . . . .	257
Bibliography . . . . .	258
Index . . . . .	261
