Comparisons of Positron and Electron Scattering By Gases

Walter E. Kauppila and Talbert S. Stein

I. Introduction	1
II. Positron and Electron Scattering by Atoms	5
III. Positron and Electron Scattering by Molecules	24
IV. Summary and Concluding Remarks	41
Acknowledgements	46
References	46

Electron Capture at Relativistic Energies

B. L. Moiseiwitsch

I. Introduction	51
II. Two-State Approximation	52
III. Second-Order Theories	57
IV. Relativistic Continuum Distorted Wave Approximation	64
V. Relativistic Eikonal Approximation	65
VI. Numerical Solution of Coupled Equations	74
VII. Experimental Data and Comparisons with Theory	74
References	77

The Low-Energy, Heavy-Particle Collisions—A Close-Coupling Treatment

Mineo Kimura and Neal F. Lane

I. Introduction	80
II. General Formulation of the Close-Coupling Method	87
III. Current Status of Theoretical and Experimental Results	113
IV. Conclusions and Perspectives	154
Acknowledgements	156
References	156

Vibronic Phenomena in Collisions of Atomic and Molecular Species*V. Sidis*

I. Introduction	161
II. Outline of the Quantum Mechanical Formulation	164
III. Quantum Treatment of Vibronic Excitation: The IOS Approximation	170
IV. Semi-Classical Treatment of Vibronic Excitation	175
V. On Franck-Condon-Type Approximations	181
VI. Studies of Vibronic Transition Processes	187
VII. Concluding Remarks	203
References	204

Associative Ionization: Experiments, Potentials, and Dynamics*John Weiner, Françoise Masnou-Seeuws, and Annick Giusti-Suzor*

I. Introduction	210
II. Experiments	211
III. The Problem of Molecular Potentials	240
IV. Dynamics of Associative Ionization	261
V. Summary, Conclusions, and Perspectives	289
Acknowledgements	291
References	292

On the β Decay of ^{187}Re : An Interface of Atomic and Nuclear Physics and of Cosmochronology*Zonghua Chen, Leonard Rosenberg, and Larry Spruch*

I. Introduction	297
II. The Relative Production Rates of Different Isotopes of Re and of Os	303
III. Refinements and Improvements	308
IV. Conclusion	318
Acknowledgements	318
References	319

Progress in Low Pressure Mercury-Rare-Gas Discharge Research*J. Maya and R. Lagushenko*

I. Introduction	321
II. Modeling of Low Pressure Mercury-Rare-Gas Discharge	323
III. Altered, Low Pressure Mercury-Rare-Gas Discharge	342
IV. Diagnostics	356
V. Summary	369
References	370
