

Contents

<i>I. Uniform Current Density Solenoids</i>	1
1.1 Field Current Relations	1
1.2 Power Relations	5
1.3 Resistance and Impedance Matching	8
1.4 Weight and Volume of Coils	10
1.5 Choice of Conductor: Copper Versus Aluminum	10
1.6 Noncircular Coils	12
1.6.1 Power and Volume Considerations of Noncircular Coils	13
1.6.2 Forces in Noncircular Coils	14
<i>II. Non-Uniform Current Density Solenoids</i>	15
2.1 Composite Windings	15
2.1.1 Concentric Coils	15
2.1.2 Axial Variation	18
2.2 The Optimum Distribution	20
2.3 Disk Solenoids	23
2.3.1 Single Thickness Bitter Plate Distribution	24
2.3.2 Variable Thickness Plates	27
2.4 Other Non-Uniform Distributions	30
2.5 Comparison of Current Distributions	30
2.5.1 Relative Efficiency and Current Density	30
2.5.2 Reduction of Current Density in Single Coils	32
2.5.3 Reduction of Current Density in Composite Coils	35

III.	<i>General Cooling Considerations and the Cooling of Uniform Current Density Coils</i>	37
3.1	Simple Temperature Relations	37
3.2	Simple Hydraulic Considerations	41
3.3	Relation of Magnet Parameters to Cooling Requirements	45
3.4	Hydraulic Parameters and Efficiency	49
3.5	Cooling of Uniform Current Density Magnets	53
3.5.1	Hollow Conductor Construction	55
3.5.2	Tape Construction	57
3.6	Construction of Uniform Current Density Solenoids	61
3.6.1	General Comments and Prediction of Performance	61
3.6.2	Specific Examples	62
3.6.3	General References to Coil Constructions	67
IV.	<i>The Cooling of High Performance Magnets and Cooling Considerations for Non-uniform Current Distributions</i>	69
4.1	Composite Coils and General Optimization	69
4.2	Disk Windings	74
4.2.1	The Location of Cooling Holes based on Resistance Paper Analogue Studies	78
4.2.2	Resistance of a Plate with Cooling Holes	87
4.2.3	Field from a Disk with Cooling Holes	88
4.2.4	Cooling Hole Distributions Resulting in Non-uniform Temperatures	89
4.3	Application of Machine Computation to the Cooling Design of Non-uniform Current Distributions	90
4.4	Construction of Non-uniform Current Density Solenoids	91
4.4.1	General Construction Details and Disk Coils	91
4.4.2	Specific Examples of Axial Cooled Disk Coils	93

4.4.3	Specific Examples of Radial Cooled Disks	99
4.4.4	References to Non-Bitter Disk Constructions	101
4.4.5	Prediction of Performance and Heat Transfer Considerations	104
4.4.6	The Concept of a National Laboratory	105
4.4.7	Hybrid Systems	107
V.	<i>Magnetic Stresses</i>	109
5.1	Force on an Element	109
5.2	Forces within a Uniform Current Density Coil	112
5.2.1	Tangential Stresses	112
5.2.2	Axial Forces	115
5.3	Forces Between Coils	117
5.4	Integration of Body Forces to Find the Exact Solution for Stresses in Coils	117
5.4.1	Bitter Disks	117
5.4.2	Uniform Current Density Coils	124
5.5	Magnetic-Pressure Approximation	125
5.6	Stresses in Composite Coils	127
VI.	<i>Superconducting Magnets</i>	131
6.1	Introduction	131
6.2	Relationship between Current Density, Field, and Volume	134
6.2.1	Current Density and Magnetic Fields	134
6.2.2	Current Density and Minimum Volume	135
6.2.3	Uniformity and Coil Volume	139
6.2.4	The Sensitivity of the Volume to Changes in Current Density	143
6.2.5	Non-uniform Current Density Coils	146
6.3	Current Density and Stabilization	150
6.3.1	Characteristics of a Composite Conductor at Uniform Longitudinal Temperature	151
6.3.2	Propagation of a Normal Front	164
6.3.3	Current Density for Composite Conductors of $\alpha = 1$	165
6.3.3(a)	Codrawn Composites	166

6.3.3(b) Cable Composites	169
6.3.3(c) Rectangular Composites	170
6.3.4 Current Density for Composite Conductor of α greater than One	171
6.4 Construction of Superconducting Magnets	174
6.4.1 Large Coils	178
6.4.2 Small Coils	179
6.4.3 Intermediate Size Coils	182
6.4.4 Cryogenic Considerations	183
VII. Pulse Magnets	190
7.1 Introduction	190
7.2 Discharge Characteristics of an L, R, C Circuit	190
7.3 The Damping Constant	196
7.4 Field Relations	198
7.5 Design Procedures for Uniform Current Density Coils	203
7.6 Non-Uniform Current Density Pulse Coils	204
7.7 The Temperature Rise in Uncooled Pulse Coils	209
7.8 Long Pulse Magnets	211
7.8.1 Long Pulse Magnets with Current Control	218
7.9 Cryogenic Coils	218
7.10 Construction of Pulse Magnets	219
7.10.1 Types of Construction	219
7.10.2 Uniform Current Density Coils	219
7.10.3 Non-Uniform Current Density Coils	222
7.10.4 Flux Concentrators	223
7.10.5 Implosion Techniques	224
VIII. Field Analysis	226
8.1 Introduction	226
8.2 Fields Along the Axis	226
8.2.1 Axial Fields from Multiple Coils	230
8.3 Field in the Central Zone	232
8.4 Fields Outside the Central Zone	237
8.4.1 Summation of Elemental Loops	237
8.4.2 Superposition of Semi-Infinite Solenoids	238
8.4.3 Dipole Fields	239

8.5	The Design of Compensated Coils to Obtain Higher Homogeneities	244
8.5.1	Graphical Solutions	244
8.5.2	Machine Computation of Compensated Coils	251
8.6	Control of Axial Profiles in Long Multi-Element Solenoids	258
8.6.1	Graphical Techniques for Profile Shaping	258
8.6.2	Machine Computation for Axial Profile Control with Multi-Element Solenoids	258
8.7	Noncircular Coils	261
8.7.1	Rectangular Coils of Infinite Length	263
8.7.2	Rectangular Saddle and Quadruple Coils of Infinite Length	265
8.7.3	Rectangular Coils of Finite Length	266
	<i>Computer Tables 8.12.1—8.12.25</i>	271
	<i>List of Symbols</i>	299
	<i>Index</i>	307
