

Contents

| | |
|--|------|
| List of Symbols | xvii |
| Chapter 1 | |
| Overview and Basic Concepts | 1 |
| 1.1. An Introductory Note | 1 |
| *1.2. Transformation Theory of Mechanics | 7 |
| *1.2a. Canonical Transformations | 7 |
| *1.2b. Motion in Phase Space | 12 |
| *1.2c. Action-Angle Variables | 20 |
| 1.3. Integrable Systems | 23 |
| *1.3a. One Degree of Freedom | 23 |
| 1.3b. Linear Differential Equations | 28 |
| 1.3c. More than One Degree of Freedom | 31 |
| *1.4. Near-Integrable Systems | 41 |
| *1.4a. Two Degrees of Freedom | 42 |
| *1.4b. More than Two Degrees of Freedom | 54 |
| 1.5. Dissipative Systems | 56 |
| 1.5a. Strange Attractors | 57 |
| 1.5b. The Lorenz System | 59 |
| Chapter 2 | |
| Canonical Perturbation Theory | 63 |
| 2.1. Introduction | 63 |
| 2.1a. Power Series | 66 |

* Starred sections indicate core material.

| | |
|--|-----|
| 2.1b. Asymptotic Series and Small Denominators | 68 |
| 2.1c. The Effect of Resonances | 70 |
| *2.2. Classical Perturbation Theory | 71 |
| *2.2a. One Degree of Freedom | 71 |
| *2.2b. Two or More Degrees of Freedom | 76 |
| 2.3. Adiabatic Invariance | 85 |
| *2.3a. Introduction and Basic Concepts | 85 |
| *2.3b. Canonical Adiabatic Theory | 88 |
| *2.3c. Slowly Varying Harmonic Oscillator | 92 |
| 2.3d. Noncanonical Methods | 94 |
| 2.4. Secular Perturbation Theory | 100 |
| *2.4a. Removal of Resonances | 101 |
| *2.4b. Higher-Order Resonances | 107 |
| *2.4c. Resonant Wave–Particle Interaction | 112 |
| 2.4d. Global Removal of Resonances | 119 |
| 2.5. Lie Transformation Methods | 123 |
| 2.5a. General Theory | 125 |
| 2.5b. Deprit Perturbation Series | 126 |
| 2.5c. Adiabatic Invariants | 130 |
| 2.6. Superconvergent Methods | 138 |
| 2.6a. Kolmogorov’s Technique | 141 |
| 2.6b. Singly Periodic Orbits | 143 |

Chapter 3

Mappings and Linear Stability

| | |
|---|-----|
| *3.1. Hamiltonian Systems as Canonical Mappings | 151 |
| *3.1a. Integrable Systems | 151 |
| *3.1b. Near-Integrable Systems | 155 |
| *3.1c. Hamiltonian Forms and Mappings | 157 |
| *3.2. Generic Behavior of Canonical Mappings | 158 |
| *3.2a. Irrational Winding Numbers and KAM Stability | 159 |
| *3.2b. Rational Winding Numbers and Their Structure | 168 |
| *3.2c. Complete Description of a Nonlinear Mapping | 172 |
| *3.2d. A Numerical Example | 176 |
| 3.3. Linearized Motion | 178 |
| 3.3a. Eigenvalues and Eigenvectors of a Matrix | 179 |
| *3.3b. Two-Dimensional Mappings | 183 |
| *3.3c. Linear Stability and Invariant Curves | 186 |
| *3.4. Fermi Acceleration | 190 |
| *3.4a. Physical Problems and Models | 191 |
| *3.4b. Numerical Results | 194 |
| *3.4c. Fixed Points and Linear Stability | 198 |
| *3.4d. Bifurcation Phenomena | 201 |
| *3.4e. Hamiltonian Formulation | 205 |
| *3.5. The Separatrix Motion | 206 |
| *3.5a. Driven One-Dimensional Pendulum | 208 |
| *3.5b. The Separatrix Mapping | 211 |

| | |
|---|------------|
| Chapter 4 | |
| Transition to Global Stochasticity | 214 |
| *4.1. Introduction | 214 |
| *4.1a. Qualitative Description of Criteria | 215 |
| *4.1b. The Standard Mapping | 218 |
| *4.2. Resonance Overlap | 226 |
| *4.2a. Rationale for Criteria | 226 |
| *4.2b. Calculation of Overlap Criteria | 227 |
| 4.3. Growth of Second-Order Islands | 232 |
| 4.3a. Elliptic Fixed Points | 232 |
| 4.3b. The Separatrix | 236 |
| *4.4. Stability of High-Order Fixed Points | 239 |
| *4.4a. Basic Elements of Greene's Method | 239 |
| *4.4b. Numerical Evaluation | 243 |
| 4.5. Renormalization for Two Resonances | 249 |
| 4.6. Variational Principle for KAM Tori | 256 |
| *4.7. Qualitative Summary and Conclusions | 257 |
| Chapter 5 | |
| Stochastic Motion and Diffusion | 259 |
| 5.1. Introduction | 259 |
| 5.2. Definitions and Basic Concepts | 260 |
| *5.2a. Ergodicity | 260 |
| *5.2b. Liapunov Characteristic Exponents | 262 |
| 5.2c. Concepts of Stochasticity | 268 |
| 5.2d. Randomness and Numerical Errors | 273 |
| 5.3. Determination of Liapunov Exponents and KS Entropy | 277 |
| 5.3a. Analytical Estimates | 279 |
| 5.3b. Numerical Methods | 280 |
| 5.4. Diffusion in Action Space | 285 |
| *5.4a. The Fokker-Planck Equation | 286 |
| *5.4b. Transport Coefficients | 289 |
| *5.4c. Steady-State and Transient Solutions | 291 |
| 5.4d. Higher-Order Transport Corrections | 293 |
| 5.5. The Effect of Extrinsic Stochastic Forces | 300 |
| 5.5a. Introduction | 300 |
| 5.5b. Diffusion in the Presence of Resonances | 303 |
| Chapter 6 | |
| Three or More Degrees of Freedom | 309 |
| *6.1. Resonance in Multidimensional Oscillations | 309 |
| *6.1a. Geometric Relations | 310 |
| *6.1b. Examples of Arnold Diffusion | 316 |

| | |
|---|------------|
| 6.2. Diffusion Rates along Resonances | 322 |
| *6.2a. Stochastic Pump Diffusion Calculation | 322 |
| 6.2b. Coupling Resonance Diffusion | 330 |
| 6.2c. Many Resonance Diffusion | 333 |
| 6.2d. Modulational Diffusion | 335 |
| 6.3. Extrinsic Diffusion | 344 |
| 6.3a. Resonance Streaming | 345 |
| 6.3b. Diffusion of a Parameter | 351 |
| 6.4. Diffusion in Toroidal Magnetic Fields | 356 |
| 6.4a. Magnetic Islands | 357 |
| 6.4b. Drift Surfaces and Diffusion in Static Fields | 363 |
| 6.4c. Time-Varying Fields | 366 |
| 6.4d. The Self-Consistent Problem | 372 |
| 6.5. Many Degrees of Freedom | 375 |

| | |
|----------------------------|------------|
| Chapter 7 | |
| Dissipative Systems | 380 |

| | |
|--|------------|
| 7.1. Simple and Strange Attractors | 380 |
| 7.1a. Basic Properties | 381 |
| 7.1b. Examples of Strange Attractors | 386 |
| 7.1c. Geometric Properties of Strange Attractors | 392 |
| 7.2. One-Dimensional Noninvertible Maps | 396 |
| 7.2a. Basic Properties | 396 |
| 7.2b. Periodic Behavior | 399 |
| 7.2c. Chaotic Motion | 411 |
| 7.3. Two-Dimensional Maps and Related Flows | 422 |
| 7.3a. Period-Doubling Bifurcations | 422 |
| 7.3b. Motion near a Separatrix | 426 |
| 7.3c. Calculation of Invariant Distributions | 434 |
| 7.4. The Fluid Limit | 442 |
| 7.4a. Fourier Mode Expansions | 443 |
| 7.4b. The Transition to Turbulence | 447 |

| | |
|---------------------|------------|
| Appendix A | |
| Applications | 453 |

| | |
|--|------------|
| A.1. Planetary Motion | 453 |
| A.2. Accelerators and Beams | 455 |
| A.3. Charged Particle Confinement | 457 |
| A.4. Charged Particle Heating | 459 |
| A.5. Chemical Dynamics | 461 |
| A.6. Quantum Systems | 462 |

| | |
|---------------------------------------|------------|
| Appendix B | |
| Hamiltonian Bifurcation Theory | 464 |
| Bibliography | 471 |
| Author Index | 483 |
| Subject Index | 489 |
