

## CONTENTS

Preface	<i>Page</i> xi
I. THE BASIC CONCEPTS OF QUANTUM MECHANICS	
§1. The uncertainty principle	1
§2. The principle of superposition	6
§3. Operators	8
§4. Addition and multiplication of operators	13
§5. The continuous spectrum	15
§6. The passage to the limiting case of classical mechanics	19
§7. The wave function and measurements	21
II. ENERGY AND MOMENTUM	
§8. The Hamiltonian operator	25
§9. The differentiation of operators with respect to time	26
§10. Stationary states	28
§11. Matrices	31
§12. The density matrix	35
§13. Momentum	38
§14. Uncertainty relations	42
III. SCHRÖDINGER'S EQUATION	
§15. Schrödinger's equation	47
§16. The fundamental properties of Schrödinger's equation	50
§17. The current density	53
§18. The variational principle	55
§19. General properties of motion in one dimension	57
§20. The potential well	61
§21. The linear oscillator	64
§22. Motion in a homogeneous field	70
§23. The transmission coefficient	72
IV. ANGULAR MOMENTUM	
§24. Angular momentum	78
§25. Eigenvalues of the angular momentum	82
§26. Eigenfunctions of the angular momentum	86
§27. Matrix elements of vectors	88
§28. Parity of a state	94
§29. Matrix elements of spherical harmonics	96
§30. Addition of angular momenta	99
§31. Matrix elements in the addition of angular momenta	102

V. MOTION IN A CENTRALLY SYMMETRIC FIELD		<i>Page</i>
§32.	Motion in a centrally symmetric field	107
§33.	Free motion (spherical co-ordinates)	110
§34.	Resolution of a plane wave	116
§35.	“Fall” of a particle to the centre	118
§36.	Motion in a Coulomb field (spherical co-ordinates)	121
§37.	Motion in a Coulomb field (parabolic co-ordinates)	130
VI. PERTURBATION THEORY		
§38.	Perturbations independent of time	133
§39.	The secular equation	137
§40.	Perturbations depending on time	140
§41.	The transition probability in a discrete spectrum	144
§42.	The transition probability under the action of a periodic perturbation	146
§43.	The transition probability under the action of a constant perturbation	147
§44.	The uncertainty relation for energy	150
§45.	Potential energy as a perturbation	153
VII. THE QUASI-CLASSICAL CASE		
§46.	The wave function in the quasi-classical case	157
§47.	Boundary conditions in the quasi-classical case	160
§48.	Bohr’s quantisation rule	162
§49.	Quasi-classical motion in a centrally symmetric field	166
§50.	Penetration through a potential barrier	171
§51.	Calculation of the quasi-classical matrix elements	178
§52.	The case of several degrees of freedom	183
VIII. SPIN		
§53.	Spin	186
§54.	Spinors	189
§55.	Spinors of higher rank	194
§56.	The wave functions of particles with arbitrary spin	195
§57.	The relation between spinors and vectors	198
§58.	Kramers’ theorem	202
IX. IDENTITY OF PARTICLES		
§59.	The principle of indistinguishability of similar particles	204
§60.	Exchange interaction	207
§61.	Symmetry with respect to interchange	210
§62.	Second quantisation. The case of Bose statistics	215
§63.	Second quantisation. The case of Fermi statistics	221

## X. THE ATOM

	<i>Page</i>
§64. Atomic energy levels	224
§65. Electron states in the atom	225
§66. Hydrogen-like energy levels	228
§67. Fine structure of the levels	229
§68. The self-consistent field	232
§69. The Thomas-Fermi equation	235
§70. The periodic system of D. I. Mendeleev	240
§71. X-ray terms	247
§72. The Stark effect	248
§73. The Stark effect in hydrogen	251
§74. The quadrupole moment of the atom	258

## XI. THE DIATOMIC MOLECULE

§75. Electron terms in the diatomic molecule	261
§76. The intersection of electron terms	262
§77. The relation between molecular and atomic terms	266
§78. Valency	270
§79. Vibrational and rotational structures of singlet terms in the diatomic molecule	275
§80. Multiplet terms. Case <i>a</i>	282
§81. Multiplet terms. Case <i>b</i>	285
§82. Multiplet terms. Cases <i>c</i> and <i>d</i>	289
§83. Symmetry of molecular terms	291
§84. Matrix elements for the diatomic molecule	294
§85. $\Lambda$ -doubling	299
§86. The interaction of atoms at large distances	302
§87. Pre-dissociation	304

## XII. THE THEORY OF SYMMETRY

§88. Symmetry transformations	314
§89. Transformation groups	317
§90. Point groups	320
§91. Representations of groups	329
§92. Irreducible representations of point groups	337
§93. Irreducible representations and the classification of terms	341
§94. Selection rules for matrix elements	343
§95. Continuous groups	345
§96. Two-valued representations of finite point groups	349
§97. Addition of angular momenta	353

## XIII. POLYATOMIC MOLECULES

	<i>Page</i>
§98. The classification of molecular vibrations	361
§99. Vibrational energy levels	368
§100. Stability of symmetrical configurations of the molecule	370
§101. Quantisation of the rotation of a rigid body	373
§102. The interaction between the vibrations and the rotation of the molecule	378
§103. The classification of molecular terms	383
§104. An electron in a periodic field	389

## XIV. THE THEORY OF ELASTIC COLLISIONS

§105. The general theory of scattering	395
§106. An investigation of the general formula	399
§107. The relation between the scattering law and the discrete energy levels	401
§108. The scattering of slow particles	403
§109. Resonance scattering	407
§110. Born's formula	409
§111. The quasi-classical case	414
§112. Rutherford's formula	417
§113. The system of wave functions of the continuous spectrum	420
§114. Collisions of like particles	423
§115. Elastic collisions between fast electrons and atoms	426

## XV. THE THEORY OF INELASTIC COLLISIONS

§116. The principle of detailed balancing	432
§117. The general theory of inelastic scattering	435
§118. Inelastic scattering of slow particles	438
§119. Breit and Wigner's formula	440
§120. Inelastic collisions between fast electrons and atoms	449
§121. The effective retardation	459
§122. Inelastic collisions between heavy particles and atoms	463
§123. Collisions with molecules	466

## XVI. MOTION IN A MAGNETIC FIELD

§124. Schrödinger's equation in a magnetic field	471
§125. Motion in a homogeneous magnetic field	474
§126. The Zeeman effect	476
§127. A neutral particle in a magnetic field	483
§128. The current density in a magnetic field	485

MATHEMATICAL APPENDICES

	<i>Page</i>
§a. Hermite polynomials	488
§b. The Airy function	491
§c. Legendre polynomials	493
§d. The confluent hypergeometric function	496
§e. The hypergeometric function	501
§f. The calculation of integrals containing confluent hypergeometric functions	503
