INTRODUCTION: IMPORTANCE OF PLASMA PROCESSES IN SEMICONDUCTOR FABRICATION **1**

CHAPTER 1. PHYSICS OF PLASMA CHEMICAL REACTIONS (THEORY AND MEASUREMENTS) **4**

1.1. How Chemical Reactions Are Accelerated in a Plasma 4
1.1.1. Introduction 4
1.1.2. Quantum Mechanical Expression for Chemical Reactions 9
1.1.3. Mutual Transfer of Translational, Rotational, and Vibrational Energies 14
1.1.4. Reaction Coordinate 18
1.1.5. Contribution of Collision Energy to the Reaction 21
1.1.6. Reactions Occurring in CF_4 Plasma 25
1.1.7. Analysis of Activation Energy; Meaning of Radical Reactivity and Ionic Reactivity 29
1.1.8. Etching Reactions of Silicon and SiO_2 36
1.2. Physical Chemistry of Plasma Etching 42
1.2.1. Etching Mechanisms 43
1.2.2. Physical Effect of Etching 47
1.2.3. Techniques for Evaluation of Etching Mechanisms 50
1.3. Physical Chemistry of Plasma CVD 55
1.3.1. What Is Plasma CVD? 55
1.3.2. Formation and State of the Plasma 57
1.3.3. Reactive Species and Reaction Mechanisms in Plasma CVD 60
1.3.4. Reaction Conditions and Products 64

1.4. Physical Chemistry of Ion Beam Deposition and Crystal Formation 65
1.4.1. Effects of Ions on Thin Films 65
1.4.2. Various Ion Beam Deposition Methods and Their Characteristics 74
1.4.3. Ion Beam Deposition 85
1.5. Physical Chemistry of Plasma Oxidation 93
1.5.1. Plasma Oxidation 93
1.5.2. State of Plasma and Surface Reaction 96
1.5.3. Growth Mechanism of Oxide Film 98

CHAPTER 2. PLASMA APPARATUS 102

2.1. Transition from Tunnel-Type to Single-Wafer Automatic Etching Apparatus 102
2.1.1. Barrel-Type Plasma Etching Apparatus 103
2.1.2. Single-Wafer Plasma Etching Apparatus 107
2.2. Chemical Dry Etching with Separated Discharge Chamber 122
2.2.1. Long-Lived Active Species 122
2.2.2. Microwave-Excited CDE 125
2.2.3. Etching Mechanism of CDE 134
2.2.4. Applications of CDE to Other Technologies 139
2.3. Microwave Plasma Etching 142
2.3.1. Introduction 142
2.3.2. Structure of Facility and Characterization of Discharge 143
2.3.3. Gas Pressure in the State of Etching 146
2.3.4. Effects of Ions and Neutrals 149
2.3.5. Study of the Etch Rate of Silicon 150
2.3.6. Mass Analyzer, Spectroscopy, and Monitor Method 154
2.3.7. Conclusion 155
2.4. Reactive Ion Etching 157
2.4.1. Introduction and Principles 157
2.4.2. Structure of the Facility and Examples 159
2.5. Characteristics of Method of Plasma Stream Transport and Technology of Semiconductor Film Production 170
2.5.1. Plasma Stream Transport: Principles and Application 170
2.5.2. Plasma Flow Transport Apparatus 177
2.5.3. Measurement of Photoemission from Plasma Stream in Modes 1–3 178

2.5.4. Applications to Other Areas 180
2.5.5. Appendix [Proof of Eq. (2.5.9)] 182
2.6. Plasma CVD Apparatus 185
2.6.1. Apparatus for PCVD 185
2.6.2. Components of PCVD Apparatus 191
2.6.3. Characteristics of the Apparatus 197
2.7. Plasma Oxidation 202
2.7.1. Various Oxidation Apparatuses 202
2.7.2. Examples of Plasma Oxidation Apparatus 212

CHAPTER 3. APPLICATION TO SEMICONDUCTOR INTEGRATED CIRCUIT FABRICATION 216

3.1. Plasma Ashing 216
3.1.1. Plasma Ashing of Resists 216
3.1.2. Ashing Rate for Resist Film 217
3.1.3. Resistance of Resist to Plasma Etching 220
3.2. Plasma Etching 222
3.2.1. Recent Trends in Technology 222
3.2.2. Isotropic and Anisotropic Etching 225
3.2.3. Silicon (Poly-Si) Etching 232
3.2.4. SiO_2 Etching 234
3.2.5. Si_3N_4 237
3.2.6. Etching of Aluminum and Other Metallic Films 238
3.2.7. Application to Semiconductor ICs 241
3.3. Plasma Chemical Vapor Deposition 245
3.3.1. Plasma CVD Silicon Nitride Film 245
3.3.2. Other Plasma CVD Films 249
3.4. Plasma Oxidation 250
3.4.1. Application of GaAs Oxide Film to Field-Effect Transistors 250
3.4.2. Application of Semiconductor Laser Facet Protective Film 260
3.4.3. Plasma Anodic Selective Oxidation of Silicon 261
3.5. Ion Doping and Impurity Doping in Plasma 267
3.5.1. Ion Doping by Molecular Beam Epitaxy 267
3.5.2. Doping of Glow-Discharge-Formed Amorphous Silicon 274
3.6. Plasma-Assisted Epitaxy (PAE) 279
3.6.1. Properties of PAE 279
3.6.2. PAE Apparatus 280
3.6.3. Effect of Plasma on Epitaxy 281
3.6.4. Application of PAE to Devices 284

3.7. Sputter Etch of Polymer Surface 285
3.7.1. Properties of Sputter-Etched Polymer Surfaces 285
3.7.2. Applications to Increasing the Adhesion of PTFE 289

CHAPTER 4. EVALUATION OF PLASMA PROCESSES 293

4.1. Residue on Ashing 293
4.1.1. Evaluation of MOS Electrical Characteristics 293
4.1.2. Observation of Surface Residue and Analysis by IMA 296
4.2. Damage by Plasma Etching 298
4.2.1. Contamination of Surface Layer 299
4.2.2. Radiation Defects 310
4.2.3. Electrical Characteristics 313
4.2.4. Problems Anticipated 315
4.3. Evaluation of Applications to Device Fabrication 316
4.3.1. LSI Process and Plasma Etching Process 316
4.3.2. Control of Etch Rate 320
4.3.3. Evaluation of Shape Formed 322
4.3.4. Example of Application 325
4.4. Resistance of Resist to Plasma and Dry Development 328
4.4.1. Resistance of Resist to Plasma 328
4.4.2. Dry Development of Resist 328
4.5. Pattern Formation and Plasma Processing 335
4.5.1. Change in Pattern Dimension 335
4.5.2. Other Problems 339
4.6. Characteristics of Plasma CVD 340
4.6.1. Introduction 340
4.6.2. Properties of SiN Films by Plasma CVD 341
4.6.3. Characteristics of Plasma SiON Film 342
4.6.4. Conclusions 353
4.7. Characteristics of Oxide Film 354
4.7.1. Characteristics of GaAs Oxide Film and MOS Interface 354
4.7.2. Properties of Silicon Oxide Film 363
