

Contents of Volume 25

Preface	iii
Contributors to Volume 25	v
Contents of Other Volumes	ix

1. CARBYNE—A LINEAR CHAINLIKE CARBON ALLOTROPE	1
<i>Yu P. Kudryavtsev, Sergey Evsyukov, Malvina Guseva, Vladimir Babaev, and Valery Khvostov</i>	
I. Introduction	2
II. Historical Brief	4
III. Theoretical Considerations	5
IV. Methods for Preparing Carbyne	14
V. Electronic Structure of Carbyne	36
VI. IR and Raman Spectroscopy of Carbyne	42
VII. Crystal Structure of Carbyne	44
VIII. Properties of Carbyne	53
IX. Conclusion	55
References	58

2. SMALL-ANGLE SCATTERING OF NEUTRONS AND X-RAYS FROM CARBONS AND GRAPHITES	71
<i>Ernst Hoinkis</i>	
I. Introduction	72
II. Interactions of Slow Neutrons and X-rays with Fixed Single Atoms	77
III. Types of Scattering Systems and the Macroscopic Differential Scattering Cross Sections	86
IV. Instrumentation and Initial Data Treatment	92
V. Calculation of the Scattering Law for Some Systems	102
VI. The Determination of the Fractal Dimensions D_s for Surface Fractals and D_m for Mass Fractals. The Area of Surface Fractals	136
VII. Small-Angle Scattering of X-rays and Neutrons from Carbons and Graphites	155
List of Symbols	224
References	227
3. CARBON MATERIALS IN CATALYSIS	243
<i>Ljubisa R. Radovic and Francisco Rodríguez-Reinoso</i>	
I. Fundamental Issues	243
II. Applications	312
III. Conclusions	334
References	336
Index	359
