PREFACE	xix
1 MAXWELL'S INTEGRAL LAWS IN FREE SPACE	1
1.0 Introduction 1	
<i>Overview of Subject, 2</i>	
1.1 The Lorentz Law in Free Space 6	
1.2 Charge and Current Densities 9	
1.3 Gauss' Integral Law of Electric Field Density 12	
<i>Singular Charge Distributions, 14</i>	
<i>Gauss' Continuity Condition, 18</i>	
1.4 Ampere's Integral Law 19	
<i>Singular Current Distributions, 21</i>	
<i>Ampere's Continuity Condition, 24</i>	
1.5 Charge Conservation in Integral Form 25	
<i>Charge Conservation Continuity Condition, 29</i>	
1.6 Faraday's Integral Law 29	
<i>Electric Field Intensity Having No Circulation, 30</i>	
<i>Electric Field Intensity With Circulation, 31</i>	
<i>Faraday's Continuity Condition, 33</i>	
1.7 Gauss' Integral Law of Magnetic Flux 33	
<i>Magnetic Flux Continuity Condition, 35</i>	

1.8	Summary	35
2	MAXWELL'S DIFFERENTIAL LAWS IN FREE SPACE	45
2.0	Introduction	45
2.1	The Divergence Operator	47
2.2	Gauss' Integral Theorem	48
2.3	Gauss' Law, Magnetic Flux Continuity and Charge Conservation	50
2.4	The Curl Operator	51
2.5	Stokes' Integral Theorem	52
2.6	Differential Laws of Ampere and Faraday	53
2.7	Visualization of Fields and the Divergence and Curl	54
2.8	Summary of Maxwell's Differential Laws and Integral Theorems	60
3	INTRODUCTION TO ELECTROQUASISTATICS AND MAGNETOQUASISTATICS	65
3.0	Introduction	65
3.1	Temporal Evolution of World Governed by Laws of Maxwell, Lorentz, and Newton	67
3.2	Quasistatic Laws	70
3.3	Conditions for Fields to be Quasistatic	71
3.4	Quasistatic Systems	77
3.5	Overview of Applications	80
3.6	Summary	82
4	ELECTROQUASISTATIC FIELDS: THE SUPERPOSITION INTEGRAL POINT OF VIEW	88
4.0	Introduction	88
4.1	Irrotational Field Represented by Scalar Potential: The Gradient Operator and Gradient Integral Theorem	89
	<i>Visualization of Two-Dimensional Irrotational Fields,</i>	<i>94</i>
4.2	Poisson's Equation	95
4.3	Superposition Principle	96
4.4	Fields Associated with Charge Singularities	97

- Dipole at the Origin, 100*
- Pair of Charges at Infinity Having Equal Magnitude and Opposite Sign, 101*
- Other Charge Singularities, 102*
- 4.5 Solution of Poisson's Equation for Specified Charge Distributions 102
 - Superposition Integral for Surface Charge Density, 104*
 - Superposition Integral for Line Charge Density, 105*
 - Two-Dimensional Charge and Field Distributions, 107*
 - Potential of Uniform Dipole Layer, 109*
- 4.6 Electroquasistatic Fields in the Presence of Perfect Conductors 111
 - Capacitance, 112*
- 4.7 Method of Images 120
- 4.8 Charge Simulation Approach to Boundary Value Problems 123
- 4.9 Summary 127

5 ELECTROQUASISTATIC FIELDS FROM THE BOUNDARY VALUE POINT OF VIEW

145

- 5.0 Introduction 145
- 5.1 Particular and Homogeneous Solutions to Poisson's and Laplace's Equations 147
 - Superposition to Satisfy Boundary Conditions, 148*
 - Capacitance Matrix, 149*
- 5.2 Uniqueness of Solutions of Poisson's Equation 149
- 5.3 Continuity Conditions 150
- 5.4 Solutions to Laplace's Equation in Cartesian Coordinates 152
- 5.5 Modal Expansions to Satisfy Boundary Conditions 156
- 5.6 Solutions to Poisson's Equation With Boundary Conditions 163
- 5.7 Solutions to Laplace's Equation in Polar Coordinates 168
- 5.8 Examples in Polar Coordinates 174
 - Simple Solutions, 175*
 - Azimuthal Modes, 176*
 - Radial Modes, 179*
- 5.9 Three Solutions to Laplace's Equation in Spherical Coordinates 180

5.10 Three-Dimensional Solutions to Laplace's Equation 184

Cartesian Coordinate Product Solutions, 185
Modal Expansion in Cartesian Coordinates, 186
Modal Expansion in Other Coordinates, 189

5.11 Summary 190

6 POLARIZATION

206

6.0 Introduction 206

6.1 Polarization Density 209

6.2 Laws and Continuity Conditions with Polarization 211

Polarization Current Density and Ampere's Law, 212
Displacement Flux Density, 213

6.3 Permanent Polarization 214

6.4 Polarization Constitutive Laws 220

6.5 Fields in the Presence of Electrically Linear Dielectrics 222

Capacitance, 222
Induced Polarization Charge, 223

6.6 Piece-wise Uniform Electrically Linear Dielectrics 225

Uniform Dielectrics, 225
Piece-wise Uniform Dielectrics, 228

6.7 Smoothly Inhomogeneous Electrically Linear Dielectrics 233

6.8 Summary 236

7 CONDUCTION AND ELECTROQUASISTATIC CHARGE RELAXATION

247

7.0 Introduction 247

7.1 Conduction Constitutive Laws 249

Ohmic Conduction, 250
Unipolar Conduction, 251

7.2 Steady Ohmic Conduction 252

Continuity Conditions, 253
Conductance, 254
Qualitative View of Fields in Conductors, 255

7.3 Distributed Current Sources and Associated Fields 259

Distributed Current Source Singularities, 259
Fields Associated with Current Source Singularities, 260
Method of Images, 262

7.4	Superposition and Uniqueness of Steady Conduction Solutions	262
	<i>Superposition to Satisfy Boundary Conditions, 263</i>	
	<i>The Conductance Matrix, 265</i>	
	<i>Uniqueness, 265</i>	
7.5	Steady Currents in Piece-wise Uniform Conductors	266
	<i>Analogy to Fields in Linear Dielectrics, 266</i>	
	<i>Inside-Outside Approximations, 267</i>	
7.6	Conduction Analogs	273
	<i>Mapping Fields That Satisfy Laplace's Equation, 275</i>	
7.7	Charge Relaxation in Uniform Conductors	277
	<i>Net Charge on Bodies Immersed in Uniform Materials, 278</i>	
7.8	Electroquasistatic Conduction Laws for Inhomogeneous Material	283
	<i>Evolution of Unpaired Charge Density, 283</i>	
	<i>Electroquasistatic Potential Distribution, 284</i>	
	<i>Uniqueness, 284</i>	
7.9	Charge Relaxation in Uniform and Piece-Wise Uniform Systems	285
	<i>Fields in Regions Having Uniform Properties, 286</i>	
	<i>Continuity Conditions in Piece-Wise Uniform Systems, 287</i>	
	<i>Nonuniform Fields in Piece-Wise Uniform Systems, 290</i>	
7.10	Summary	299

8 MAGNETOQUASISTATIC FIELDS: SUPERPOSITION INTEGRAL AND BOUNDARY VALUE POINTS OF VIEW

310

8.0	Introduction	310
	<i>Vector Field Uniquely Specified, 311</i>	
8.1	The Vector Potential And the Vector Poisson Equation	312
	<i>Two-Dimensional Current and Vector Potential Distributions, 314</i>	
8.2	The Biot-Savart Superposition Integral	317
	<i>Stick Model for Computing Fields of Electromagnet, 320</i>	
8.3	The Scalar Magnetic Potential	324
	<i>The Scalar Potential of a Current Loop, 325</i>	
8.4	Magnetoquasistatic Fields in the Presence of Perfect Conductors	328

	<i>Boundary Conditions and Evaluation of Induced Surface Current Density, 328</i>	
	<i>Voltage at the Terminals of a Perfectly Conducting Coil, 330</i>	
	<i>Inductance, 333</i>	
8.5	Piece-Wise Magnetic Fields	335
8.6	Vector Potential and the Boundary Value Point of View	340
	<i>Vector Potential for Two-Dimensional Fields, 340</i>	
	<i>Vector Potential for Axisymmetric Fields in Spherical Coordinates, 341</i>	
	<i>Boundary Value Solution by "Inspection", 342</i>	
	<i>Method of Images, 344</i>	
	<i>Two-Dimensional Boundary Value Problems, 346</i>	
8.7	Summary	351
9	MAGNETIZATION	361
9.0	Introduction	361
9.1	Magnetization Density	363
9.2	Laws and Continuity Conditions with Magnetization	364
	<i>Faraday's Law Including Magnetization, 364</i>	
	<i>Magnetic Flux Density, 365</i>	
	<i>Terminal Voltage with Magnetization, 365</i>	
9.3	Permanent Magnetization	366
9.4	Magnetization Constitutive Laws	371
9.5	Fields in the Presence of Magnetically Linear Insulating Materials	377
	<i>Inductance in the Presence of Linearly Magnetizable Materials, 378</i>	
	<i>Induced Magnetic Charge: Demagnetization, 382</i>	
9.6	Fields in Piece-Wise Uniform Magnetically Linear Materials	383
	<i>Excitation in Region of High Permeability, 388</i>	
	<i>Excitation in Region of Low Permeability, 389</i>	
9.7	Magnetic Circuits	390
	<i>Electrical Terminal Relations and Characteristics, 394</i>	
9.8	Summary	397
10	MAGNETOQUASISTATIC RELAXATION AND DIFFUSION	411
10.0	Introduction	411

- 10.1 Magnetoquasistatic Electric Fields in Systems of Perfect Conductors 415
- 10.2 Nature of Fields Induced in Finite Conductors 420
- 10.3 Diffusion of Axial Magnetic Fields Through Thin Conductors 424
- 10.4 Diffusion of Transverse Magnetic Fields Through Thin Conductors 429
Response to a Step in Applied Field, 432
- 10.5 Magnetic Diffusion Laws 434
Physical Interpretation, 435
- 10.6 Magnetic Diffusion Transient Response 437
Product Solutions to the One-Dimensional Diffusion Equation, 439
- 10.7 Skin Effect 441
- 10.8 Summary 447

11 ENERGY, POWER FLOW AND FORCES

457

- 11.0 Introduction 457
Power Flow in a Circuit, 458
Overview, 460
- 11.1 Integral and Differential Conservation Statements 461
- 11.2 Poynting's Theorem 462
Systems Composed of Perfect Conductors and Free Space, 463
- 11.3 Ohmic Conductors with Linear Polarization and Magnetization 467
An Alternative Conservation Theorem for Electroquasistatic Systems, 469
Poynting Power Density Related to Circuit Power Input, 471
Poynting Flux and Electromagnetic Radiation, 472
- 11.4 Energy Storage 472
Energy Densities, 472
Energy Storage in Terms of Terminal Variables, 473
- 11.5 Electromagnetic Dissipation 479
Energy Conservation for Temporarily Periodic Systems, 480
Induction Heating, 481
Dielectric Heating, 483

	<i>Hysteresis Losses, 485</i>	
11.6	Electrical Forces on Macroscopic Media	486
11.7	Macroscopic Magnetic Forces	495
	<i>Reciprocity Conditions, 496</i>	
	<i>Finding the Coenergy, 497</i>	
	<i>Evaluation of the Force, 497</i>	
	<i>The Torque of Electrical Origin, 501</i>	
11.8	Forces on Macroscopic Electric and Magnetic Dipoles	504
	<i>Force on an Electric Dipole, 505</i>	
	<i>Force on Electric Charge Derived from Energy Principle, 506</i>	
	<i>Force on a Magnetic Charge and Magnetic Dipole, 508</i>	
	<i>Comparison of Coulomb's Force to the Force on a Magnetic Dipole, 510</i>	
11.9	Macroscopic Force Densities	512
	<i>The Lorentz Force Density, 513</i>	
	<i>The Kelvin Polarization Force Density, 514</i>	
	<i>The Kelvin Magnetization Force Density, 516</i>	
	<i>Alternative Force Densities, 517</i>	
11.10	Summary	521

12 ELECTRODYNAMIC FIELDS; THE SUPERPOSITION INTEGRAL POINT OF VIEW

535

12.0	Introduction	535
12.1	Electrodynamic Fields and Potentials	537
	<i>Superposition Principle, 539</i>	
	<i>Continuity Conditions, 539</i>	
12.2	Electrodynamic Fields of Source Singularities	542
	<i>Potential of a Point Charge, 542</i>	
	<i>Electric Dipole Field, 543</i>	
	<i>Electric Dipole in the Sinusoidal Steady State, 548</i>	
	<i>The Far-Field and Uniformly Polarized Plane Waves, 550</i>	
	<i>Magnetic Dipole Field, 550</i>	
12.3	Superposition Integral for Electrodynamic Fields	552
	<i>Transient Response, 552</i>	
	<i>Sinusoidal Steady State Response, 553</i>	
12.4	Antennae Radiation Fields in the Sinusoidal Steady State	553
	<i>Distributed Current Distribution, 555</i>	
	<i>Arrays, 556</i>	

- Dipoles in Broadside Array, 558*
- Dipoles in End-Fire Array, 558*
- Finite Dipoles in End-Fire Array, 560*
- Gain, 560*
- 12.5 Complex Poynting's Theorem and Radiation Resistance 561
 - Complex Poynting's Theorem, 561*
 - Radiation Resistance, 562*
- 12.6 Periodic Sheet-Source Fields: Uniform and Nonuniform Plane Waves 565
 - Transverse Magnetic (TM) Fields, 566*
 - Product Solutions to the Helmholtz Equation, 567*
 - Transverse Electric (TE) Fields, 571*
- 12.7 Electrodynamic Fields in the Presence of Perfect Conductors 574
 - Method of Images, 574*
 - Quarter-wave Antenna Above a Ground-plane, 576*
 - Two-element Array over Ground Plane, 576*
 - Ground-plane With Reflector, 577*
 - Boundaries at the Nodes of Standing Waves, 578*
- 12.8 Summary 580

13 ELECTRODYNAMIC FIELDS: THE BOUNDARY VALUE POINT OF VIEW

588

- 13.0 Introduction 588
- 13.1 Introduction to TEM Waves 590
 - The MQS Limit, 593*
 - The MQS Approximation, 594*
 - The EQS Limit, 596*
 - The EQS Approximation, 596*
- 13.2 Two-Dimensional Modes Between Parallel-Plates 598
- 13.3 TE and TM Standing Waves Between Parallel Plates 602
- 13.4 Rectangular Waveguide Modes 611
- 13.5 Dielectric Waveguides: Optical Fibers 618
- 13.6 Summary 623

14 ONE-DIMENSIONAL WAVE DYNAMICS

630

- 14.0 Introduction 630
- 14.1 Distributed Parameter Equivalent and Models 631
 - Plane Waves, 632*

	<i>Ideal Transmission Line, 633</i>	
	<i>Quasi-One-Dimensional Models, 634</i>	
14.2	Transverse Electromagnetic Waves 635	
	<i>No TEM Fields in Hollow Pipes, 638</i>	
	<i>Power-flow and Energy Storage, 638</i>	
14.3	Transients on Infinite Transmission Lines 641	
	<i>Response to Initial Conditions, 643</i>	
14.4	Transients on Bounded Transmission Lines 647	
	<i>Matching, 650</i>	
14.5	Transmission Lines in the Sinusoidal Steady State 656	
	<i>Transmission Line Impedance, 657</i>	
14.6	Reflection Coefficient Representation of Transmission Lines 662	
	<i>Smith Chart, 663</i>	
	<i>Standing Wave Ratio, 665</i>	
	<i>Admittance in the Reflection-Coefficient Plane, 667</i>	
14.7	Distributed Parameter Equivalent Models With Dissipation 668	
14.8	Uniform and TEM Waves in Ohmic Conductors 672	
	<i>Displacement Current Much Greater Than Displacement Current, 675</i>	
	<i>Conduction Current Much Greater Than Conduction Current, 675</i>	
14.9	Quasi-One-Dimensional Models 679	
	<i>Charge Diffusion Transmission-Line, 682</i>	
	<i>Skin-Depth small Compared to All Dimensions of Interest, 684</i>	
14.10	Summary 686	

15 OVERVIEW OF ELECTROMAGNETIC FIELDS

695

15.0	Introduction 695
15.1	Source and Material Configurations 696
	<i>Incremental Dipoles, 696</i>
	<i>Planar Periodic Configurations, 697</i>
	<i>Cylindrical and Spherical, 698</i>
	<i>Fields Between Plane Parallel Plates, 698</i>
	<i>Axisymmetric (Coaxial) Fields, 699</i>
	<i>TM and TE Fields with Longitudinal Boundary Conditions, 699</i>
	<i>Cylindrical Conductor Pair and Conductor Plane, 699</i>

- 15.2 Macroscopic Media 700
 - Source Representation of Macroscopic Media, 700*
 - Material Idealizations, 701*
 - The Relativity of Perfection, 701*
- 15.3 Characteristic Times, Physical Processes, and Approximations 702
 - Self-Consistency of Approximate Laws, 702*
 - Similitude and Maxwell's Equations, 704*
 - Characteristic Times and Lengths, 705*
- 15.4 Energy, Power, and Force 708
 - Energy and Quasistatics, 709*

APPENDICES

Appendix 1. Vector Operations 713

- Vectors, 713*
- Vector Addition, 714*
- Definition of Scalar Product, 716*
- Definition of Vector Product, 717*
- The Scalar Triple Product, 718*
- The Double Cross-Product, 719*

Appendix 2. Line and Surface Integrals and Proof that Curl is a Vector 721

- Line Integrals, 721*
- Surface Integrals, 721*
- Proof that the Curl Operation Results in a Vector, 723*

INDEX
