

TABLE OF CONTENTS

CHAPTER I — IONIC MOBILITIES

PART ONE

| | |
|--|----|
| 1. Introduction | 1 |
| 2. Nature of the Problem of Mobility Measurement | 2 |
| 3. Summary of the Useful Experimental Methods | 8 |
| 4. The Erikson Air-Blast Method | 10 |
| 5. The Bradbury Modification of the Tyndall-Grindley Method | 13 |
| 6. The Four-Gauze Electrical Shutter Method of Tyndall and Powell | 16 |
| 7. The Bradbury-Nielsen Shutter Method | 22 |
| 8. The Townsend Magnetic-Deflection Method | 25 |
| 9. The Measurement of Mobilities, with Pulse Techniques | 32 |

PART TWO

| | |
|--|-----|
| 1. Introduction | 39 |
| 2. The Generic Classical Kinetic Analysis of Mobilities, Assuming Solid Elastic Spherical Molecules and Ions of Equal Mass | 40 |
| 3. Forces between Ions and Molecules, and Cluster Formation | 45 |
| 4. The Action of Forces at a Distance, and the Small-Ion Concept | 51 |
| 5. Comparison of Limiting Theories with Experiment | 55 |
| 6. Complete Ion-Mobility Theories | 64 |
| 7. The Effect of Temperature on Mobilities | 91 |
| 8. The Variation of Mobilities with X/p , and the Mobilities at High X/p | 95 |
| 9. Difference in Mobilities of Positive and Negative Ions, and Aging | 112 |
| 10. Mobilities in Mixtures | 129 |
| 11. Generalized Theory of Motion of Ions through Gases | 141 |
| 12. Summary of Conclusions on the Nature of Gaseous Ions, and Their Behavior | 162 |
| 13. Mobilities of Large Ions | 171 |
| Bibliography to Chapter I | 180 |

| | |
|--|-----|
| CHAPTER II — THE DIFFUSION OF CARRIERS IN GASES | |
| 1. Introduction | 185 |
| 2. Definition of Diffusion Coefficient and Statement of Basic Relations | 186 |
| 3. The Experimental Determination of D for Gaseous Ions | 190 |
| 4. The Ratio between Diffusion Coefficient and Mobility | 193 |
| 5. The Distribution of Particles in Space and Time under Diffusion; Average Velocities of Diffusion | 199 |
| 6. Ambipolar Diffusion | 206 |
| Bibliography to Chapter II | 209 |
| CHAPTER III — THE VELOCITIES OF ELECTRONS IN GASES | |
| 1. Introduction | 211 |
| 2. The Simple Theory of Electron Velocities and Their Evaluation in Terms of Experiment | 212 |
| 3. The Compton Theory of Electron Mobilities | 219 |
| 4. The Comparison of Theory and Experiment | 228 |
| 5. Later Developments of the Townsend Techniques | 242 |
| 6. Electron-Velocity Measurements at Ionizing and Sparking Fields | 251 |
| Bibliography to Chapter III | 267 |
| CHAPTER IV — THE DISTRIBUTION OF ENERGY OF ELECTRONS IN A FIELD IN A GAS | |
| PART ONE — THEORY AND GENERAL CONSIDERATIONS | |
| 1. Introduction | 269 |
| 2. Chronological Summary of the Work on Electron-Energy Distribution | 270 |
| 3. General Approach to the Derivation of the Druyvesteyn Distribution Law | 284 |
| 4. Energy Distributions and Related Quantities Deduced from Holstein's Theory by D. Barbieri | 294 |
| 5. Electron Energies from Microwave Analysis | 300 |
| 6. Data Relating X/p , Electron Energies, and Associated Quantities, as Compiled from the Collected Studies by the Townsend and Bailey Methods | 319 |
| PART TWO — THE THEORY AND USE OF PROBES | |
| 1. Introduction | 329 |
| 2. Idealized General Assumptions, and Review of the Kinetic-Theory Concepts Involved | 331 |

| | |
|--|-----|
| 3. The Probe Measurement | 332 |
| 4. The Theory of the Probe | 334 |
| 5. The Determination of the Distribution Law by Probe Studies | 342 |
| 6. The Boyd Analysis of Sheath Disturbance and Ion Temperatures | 346 |
| 7. The Double-Probe Technique | 353 |
| 8. Sources of Error in Probe Technique | 361 |
| Bibliography to Chapter IV | 370 |
| CHAPTER V — THE FORMATION OF NEGATIVE IONS | |
| 1. Introduction | 375 |
| 2. The Electron-Attachment Theory of J. J. Thomson | 378 |
| 3. The Method of Bailey | 384 |
| 4. The Direct Measurement of h | 399 |
| 5. Observed Attachment Coefficients | 425 |
| 6. The Attachment Processes and Molecular Structure | 445 |
| 7. Energy of Negative Ion Formation in O_2 , and the Bradbury-Bloch Theory of Attachment to O_2 | 450 |
| 8. The Theory of the Negative Ion Formation in O_2 | 461 |
| 9. The Creation and Appearance of Negative Ions Other than Those Formed in Gas by Attachment Processes | 466 |
| Bibliography to Chapter V | 474 |
| CHAPTER VI — THE RECOMBINATION OF IONS | |
| 1. The Idealized Recombination Relations | 477 |
| 2. The Weakness of Idealized Theory | 480 |
| 3. The Extended Treatments of Recombination Processes | 482 |
| 4. The Measurement of the Coefficient of Recombination | 492 |
| 5. The Microwave Breakdown Method | 503 |
| 6. The Mechanism of Recombination, and the Various Recombination Processes | 511 |
| 7. The Observed Recombination Coefficients and Their Interpretation | 558 |
| 8. The Dissociative Electron-Ion Recombination Data | 563 |
| Bibliography to Chapter VI | 594 |
| CHAPTER VII — ELECTRICAL CONDUCTION IN GASES BELOW IONIZATION BY COLLISION | |
| 1. Introduction | 597 |
| 2. The Geometrically Conditioned Saturation Current | 598 |

| | |
|---|-----|
| 3. The Diffusive Effects on Currents in a Gas. The Photoelectric Current of Low Density in Gases | 601 |
| 4. The Space-Charge Limited Current | 620 |
| 5. The Effect of Positive Ions on the Space-Charge Limited Electron Current and the Space-Charge Limited Ion Detector | 628 |
| 6. Currents with Volume Ionization and Ion Recombination in a Gas | 634 |
| Bibliography to Chapter VII | 646 |
| CHAPTER VIII — IONIZATION BY COLLISION OF ELECTRONS IN A GAS — TOWNSEND'S FIRST COEFFICIENT | |
| 1. Introduction | 647 |
| 2. The Experimental Evaluation of the Townsend Coefficients | 655 |
| 3. The Form of the a/p - X/p Curves, and the η Efficiency Function | 664 |
| 4. Indirect Evaluations of the First Coefficient | 671 |
| 5. Measured Values of the First Townsend Coefficients in Pure Gases | 675 |
| 6. Discussion of Observations, Including Augmentation of α by Processes Other than Direct-Impact Ionization | 693 |
| 7. Measurements of the First Coefficient α in Gases Where Electrons Attach to Form Negative Ions | 708 |
| 8. Theoretical Evaluation of α/p as a Function of X/p | 712 |
| 9. Ionization by Collision in Nonuniform Fields | 727 |
| Bibliography to Chapter VIII | 748 |
| CHAPTER IX — THE SECOND TOWNSEND COEFFICIENT | |
| 1. Introduction | 751 |
| 2. The Possible Secondary Mechanisms Active in Gaseous Breakdown | 760 |
| 3. Liberation of Electrons at the Cathode by Positive Ion Bombardment | 764 |
| 4. Liberation of Electrons at the Cathode by Photons Produced by the Avalanches | 795 |
| 5. Ionization by Photons in the Gas in Uniform Field Geometry | 801 |
| 6. The Action of Metastable Atoms at the Cathode | 807 |
| 7. Ionization by Metastable and Excited Atoms in the Gas | 809 |

| | |
|--|------|
| 8. The Joint Action of Photoelectric Ionization at the Cathode and Secondary Electron Liberation by Positive Ion Impact on the Cathode | 811 |
| 9. Field Emission as a Secondary Mechanism | 813 |
| 10. The Secondary Electron Liberation by Charged Insulating Dusts; the Malter, or Paetow, Effect | 826 |
| 11. The Apparent Second Coefficient Resulting from Space-Charge Distortion Owing to Heavy Current Densities | 828 |
| 12. The Values of the Second Coefficients Observed by Townsend's Method, and Their Interpretation | 833 |
| 13. The Beginning of Dynamic Studies | 852 |
| 14. Fast Oscillographic Analysis of γ_i and $f\theta g$ by von Gugelberg | 857 |
| 15. The Oscillographic Studies of Metastable Atoms by J. P. Molnar | 867 |
| 16. The Dynamic Study of the Fast Components in Secondary Mechanisms by J. A. Hornbeck | 887 |
| 17. The Method of E. J. Lauer and of L. Colli and U. Facchini in Coaxial Cylindrical Geometry with Low X/p at the Cathode | 913 |
| 18. Amin's Fast Oscilloscopic Studies of Point to Plane Corona | 938 |
| 19. Derivation of Expressions for Burst-Pulse, Geiger Counter Spread, and Streamer Thresholds | 953 |
| Bibliography to Chapter IX | 962 |
| Appendix I—Notes Covering Advances, 1955-1959 | 967 |
| Appendix II—Standard Reference Data | 987 |
| Index to Authors | 991 |
| Index to Subjects | 1000 |
