MODEL OF THE FULLY IONIZED PLASMA AND THE COULOMB SYSTEM	1
---	---

Part 1 The Fully Ionized System in the Quasistatic
Electromagnetic Field, The Coulomb System

Chapter I EQUILIBRIUM STATES OF THE COULOMB SYSTEM

1. Review of the Basic Concepts	5
1.1 Liouville's Law	6
1.2 The Statistical Ensembles	7
2. Macroscopic Qualities	9
2.1 Relations between the Thermodynamic Potentials and the Canonical Partition Function	9
2.2 Relations between the Thermodynamic Potentials and the Macrocanonical Partition Function	11
3. Partition Function of the Coulomb System	13
3.1 The Problem	13
3.2 Elements of Cluster Expansions	16
3.3 Irreducible Clusters	21
3.4 The Prototype Cluster Expansions	23
3.5 The Giant Cluster Expansions	32
4. Microscopic Qualities of the Coulomb System	36
4.1 Distribution of the Individuals in Phase Space	37
4.2 The Hierarchy	38
4.3 Physical Interpretation of the Hierarchy	40
4.4 Approximate Solution of the Hierarchy	43
4.5 Single-Particle Approach	44
4.6 The Poisson-Boltzmann Equation	45

4.7 The Pair Approximation	50
4.8 Solution of the Generalized Poisson–Boltzmann Equation	59
4.9 The Born–Green Equation	61
4.10 Distributions of Dependent Quantities	64
4.11 The Microfield Distribution	65
5. The Fluctuation–Dissipation Theorem	73
5.1 Derivation of the General Theorem	73
5.2 Fluctuation–Dissipation Theorem for the Coulomb System	76
References and Supplementary Reading	77

Chapter II NONEQUILIBRIUM STATES OF THE COULOMB SYSTEM, GENERAL DESCRIPTION

1. The Exact Density Distribution of the Single System	81
1.1 The Klimontovich Equations	81
2. The Average Distributions of Gibbs' Ensemble	84
2.1 Derivation of the BBGKY Hierarchy from the Klimontovich Equations	84
References and Supplementary Reading	90

Chapter III NONEQUILIBRIUM STATES OF THE COULOMB SYSTEM, DESCRIPTION WITHOUT INDIVIDUAL PARTICLE CORRELATIONS

1. The Vlasov Approach	91
1.1 The Vlasov Equation	91
1.2 General Properties	94
1.3 The Linear Approximation	96
2. Solutions of the Linear Vlasov Equation	97
2.1 The Eigensolution Method	97
2.2 Particle Beams with a Sharp Velocity	100
2.3 Spherical Distribution of Monoenergetic Particles	102
2.4 The Packet Distributions	104
2.5 The Gap Distributions	106
2.6 Arbitrary Distributions—Penrose Criterion	109
3. Fourier Transformation in Time	113
3.1 The External Perturbation Problem	114
3.2 The Initial Value Problem	117
4. Landau's Treatment of the Vlasov Equation	118
4.1 Landau's Solution	118
4.2 General Aspects of Landau Damping	129
5. Van Kampen's Treatment of the Vlasov Equation	131
5.1 The Adjoint Vlasov Equation	133
5.2 Completeness of Van Kampen's Modes	134
5.3 Solution of the Initial Value Problem by Eigensolution Expansion— Comparison with Landau's Result	137
References and Supplementary Reading	138

Chapter IV NONEQUILIBRIUM STATES OF THE COULOMB SYSTEM WITH INDIVIDUAL PARTICLE CORRELATIONS

1. Derivation of Kinetic Equations from the BBGKY Hierarchy	141
1.1 General Basis	141
1.2 The Boltzmann Equation	150
1.3 The Landau–Fokker–Planck Equation	156
1.4 The Bogolubov–Lenard–Balescu Equation	166
2. Macroscopic Equations	176
2.1 Moment Equations from the Boltzmann Equation: The Grad Method	176
2.2 Moment Equations from the Boltzmann Equation: The Chapman–Enskog Method	188
2.3 Moment Equations from the Bhatnagar–Gross–Krook Equation	198
3. Review of Systematic Methods	201
3.1 Bogolubov's Theory	201
3.2 Extension of Bogolubov's Theory to Plasmas	209
3.3 Multiple Time-Scales Formalism	217
References and Supplementary Reading	221

Part 2 The Fully Ionized System in the General Electromagnetic Field

Chapter V SINGLE-PARTICLE RADIATION

1. General Formulation of Electromagnetic Fields	227
1.1 Basic Equations of Electrodynamics	227
1.2 The Electrodynamical Potentials	230
1.3 The General Electromagnetic Fields	234
1.4 The Liénard–Wiechert Potentials	235
2. General Formulation of Radiation Fields	237
2.1 Multipole Expansion of the Field Calculated from the Hertz Vector	237
2.2 Electromagnetic Field of a Single Charge	241
2.3 Angular and Frequency Distribution of the Energy Radiated from a Charge	243
3. Bremsstrahlung	246
3.1 Classical Description	246
3.2 Results of the Quantum-Mechanical Description	251
4. Cyclotron Radiation	255
References and Supplementary Reading	262

Chapter VI MANY-PARTICLE INTERACTIONS
WITH ELECTROMAGNETIC FIELDS

1. Basic Equations	265
2. Solution with Collective Particle Correlations Only	269
2.1 Basic Equations and Linearization Procedure	269
2.2 The Conductivity Tensor and the Dielectric Tensor	272
2.3 The Dispersion Relation	273
2.4 Electromagnetic Instabilities	279
3. Solutions Including Individual Electron-Ion Correlations	282
3.1 The Model of Dawson and Oberman	283
3.2 Description with the Fokker-Planck Equation	294
4. Collective Description of Particle Dynamics—Individual Description of Emission Processes—Light Scattering	299
4.1 Individual Electron Emission from the Plasma	300
4.2 Scattering for a Correlation-Free System	307
4.3 Scattering in a System with Collective Correlations	308
4.4 Application of the Fluctuation-Dissipation Theorem	314
5. Radiation Transport	314
5.1 The Transport Equation	314
5.2 Some Remarks on the Boundary Conditions	317
References and Supplementary Reading	320
 <i>Appendix</i> CHARACTERISTIC QUANTITIES OF THE PLASMA	323
References	331
 AUTHOR INDEX	333
SUBJECT INDEX	337
