Aftershocks and Fault-Zone Properties

CARL KISSLINGER

1. Introduction	1
2. The Phenomenology of Aftershocks	3
2.1 Definitions and Basic Properties	3
2.2 Aftershocks of Normal Depth and of Deeper Mainshocks	4
2.3 Growth of the Aftershock Zone with Time	5
2.4 The Distribution of Magnitudes and the Strongest Aftershock	6
3. Temporal Behavior of Aftershocks	7
3.1 The Modified Omori Function	8
3.2 The Stretched Exponential Function	9
3.3 Extensions of the MOM and STREXP Models	11
3.4 The Dieterich Model	13
4. Analysis of Data	14
4.1 Identification of Aftershocks	14
4.2 Fitting a Rate Function to the Data	16
5. Physical Factors Controlling the Rate of Decay	17
5.1 Models of Aftershock Physics	17
5.2 Interpreting Observations of Sequences	20
6. Class 3 Aftershocks and Events Triggered at Large Distances	29
7. Discussion and Future Research Opportunities	32
References	34

On FIRE at Ten

DAVID A. RANDALL, BRUCE ALBRECHT, STEPHEN COX, DOUG JOHNSON,
PATRICK MINNIS, WILLIAM ROSSOW, AND DAVID O'C. STARR

1. Introduction	37
2. Scientific Background	40
2.1 Climate Modeling Perspective	40
2.2 Remote Sensing Perspective	42
2.3 Overview of Cirrus Climatology	45
2.4 Overview of Boundary-Layer Cloud Climatology	51

3. FIRE 86	55
3.1 Experiment Overview	55
3.2 Scientific Results	64
4. FIRE 87	72
4.1 Experiment Overview	72
4.2 Scientific Results	73
5. FIRE 91	84
5.1 Scientific Objectives and Observational Requirements	84
5.2 Key Observational Augmentations	85
5.3 Experimental Design Strategies	88
5.4 Experiment Overview	91
5.5 Scientific Results	95
5.6 FIRE 93: TOGA-COARE	107
6. ASTEX	109
6.1 Introduction	109
6.2 Structure and Evolution of the Subtropical Marine Boundary Layer	111
6.3 Interactions between Cumulus and Stratocumulus Clouds	115
6.4 Effects of Aerosols on Stratocumulus Clouds	120
6.5 The Transition Zone	121
6.6 Variations in Cloud Structure in Clean and Dirty Airmasses	123
6.7 Lagrangian Experiments	125
6.8 Diurnal Cycle	125
6.9 Assimilation of Upper-Air Data from Islands and Ships	125
6.10 Development of Surface-Based Remote Sensors	126
6.11 Finite-Cloud Effects	126
7. Cloud Parameterizations	128
7.1 Parameterizations of Cloud Formation and Dissipation	128
7.2 Parameterizations of Cloud Optical Properties	133
8. FIRE and ISCCP	137
8.1 Introduction	137
8.2 Evaluation of Satellite-Derived Cloud Properties	139
8.3 New Remote Sensing Techniques	149
9. FIRE in the Classroom	158
10. Future Issues	158
10.1 Cirrus Systems	158
10.2 FIRE on the Ice	159
10.3 Future FIRE Cloud Remote Sensing Issues	160
References	163

**Dissipation of Tidal Energy, Paleotides, and Evolution of the
Earth–Moon System**

BORIS A. KAGAN AND JÜRGEN SÜNDERMANN

1. Introduction	179
2. Tidal Energy Budget in the Ocean–Lithosphere–Atmosphere System	183
2.1 Tidal Energy Budget Equations	184
2.2 Astronomical Estimates of Tidal Energy Dissipation	187
2.3 Geophysical Estimates of Tidal Energy Dissipation	190
2.4 Satellite Estimates of Tidal Energy Dissipation	197
3. The Problem of Tidal Energy Dissipation and the Tidal Energy Cycle in the Ocean–Lithosphere–Atmosphere System	200
4. Models of Tidal Evolution of the Earth–Moon System with a Phase-Lagged Ellipsoid Approximation of the Earth	209
5. Evolution of the Ocean and Ocean Tides through Geologic Time	219
6. Models of Earth–Moon Tidal Evolution Taking into Account Changing Resonance Properties of the Ocean	245
7. Conclusions	254
List of Principal Symbols	257
