## Part 1

<b>Preface</b>	xi
<b>List of Participants</b>	xiii
Semi-Lagrangian advective schemes and their use in meteorological modeling J. R. BATES	1
Adaptive mesh refinement for hyperbolic equations MARSHA J. BERGER	31
Averaged multivalued solutions and time discretization for conservation laws YANN BRENIER	41
Computing with high-resolution upwind schemes for hyperbolic equations SUKUMAR R. CHAKRAVARTHY AND STANLEY OSHER	57
Mathematical modeling of the steam-water condensation in a condenser CARLOS CONCA	87
Some theoretical and computational considerations of atmospheric fronts M. J. P. CULLEN AND R. J. PURSER	99
Numerical solution of Euler's equation by perturbed functionals S. K. DEY	113
A mathematical model and numerical study of platelet aggregation during blood clotting AARON L. FOGELSON	129

Matching the Navier-Stokes equations with observations TZVI GAL - CHEN	149
Dynamics of flame propagation in a turbulent field AHMED F. GHONIEM	161
New stability criteria for difference approximations of hyperbolic initial-boundary value problems MOSHE GOLDBERG AND EITAN TADMOR	177
A modified finite element method for solving the incompressible Navier-Stokes equations PHILIP M. GRESHO	193
Computational fusion magnetohydrodynamics R. C. GRIMM	241
A finite amplitude eigenmode technique to solve and analyze nonlinear equations RICHARD GROTHJAHN	271
Numerical boundary conditions BERTIL GUSTAFSSON	279
Numerical simulation in three space dimensions of time-dependent thermal convection in a rotating fluid DAVID H. HATHAWAY AND RICHARD C. J. SOMERVILLE	309
Static rezone methods for tensor-product grids JAMES M. HYMAN AND MICHAEL J. NAUGHTON	321
A nonoscillatory shock capturing scheme using flux limited dissipation ANTONY JAMESON	345

## Part 2

The use of spectral techniques in numerical weather prediction M. JARRAUD AND A. P. M. BAEDE	1
Improved flux calculations for viscous incompressible flow by the variable penalty method HAROON KHESHGI AND MITCHELL LUSKIN	43
TVD schemes in one and two space dimensions RANDALL J. LEVEQUE AND JONATHAN B. GOODMAN	51

Computational methods for discontinuities in fluids OLIVER A. MCBRYAN	63
Problems and numerical methods of the incorporation of mountains in atmospheric models FEDOR MESINGER AND ZAVISA I. JANJIC	81
Discrete shocks for systems of conservation laws DANIEL MICHELSON	121
Initial-boundary value problems for incomplete singular perturbations of hyperbolic systems DANIEL MICHELSON	127
A mixed finite element method for 3d Navier-Stokes equations J. C. NEDELEC	133
Stability of the flow around a circular cylinder to forced disturbances V. A. PATEL	143
Some contributions to the modelling of discontinuous flows P. ROE	163
Techniques for numerical simulation of large-scale eddies in geophysical fluid dynamics ROBERT SADOURNY	195
Finite difference techniques for nonlinear hyperbolic conservation laws RICHARD SANDERS	209
Conforming finite element methods for incompressible and nearly incompressible continua L. R. SCOTT AND M. VOGELIUS	221
Vortex methods and turbulent combustion JAMES A. SETHIAN	245
Numerical solutions of rotating internal flows CHARLES G. SPEZIALE	261
High resolution TVD schemes using flux limiters PETER K. SWEBY	289
Stability of hyperbolic finite-difference models with one or two boundaries LLOYD N. TREFETHEN	311

Upwind-difference methods for aerodynamic problems governed by the Euler equations BRAM VAN LEER	327
An MHD model of the earth's magnetosphere C. C. WU	337
Application of TVD schemes for the Euler equations of gas dynamics H. C. YEE, R. F. WARMING AND AMI HARTEN	357
Recent applications of spectral methods in fluid dynamics THOMAS A. ZANG AND M. YOUSUFF HUSSAINI	379
