### VII. Shock wave structure in gases

<b>§1</b> ,	Introduction	•	465
1. 1	The shock front		468
§2.	Viscous shock front		468
§3.	The role of viscosity and heat conduction in the formation of a shock front		477
§4.	Diffusion in a binary gas mixture		482
§5.	Diffusion in a shock wave propagating through a binary mixture	•	485
2. 1	The relaxation layer		489
§6.	Shock waves in a gas with slow excitation of some degrees of freedom .		489
§7.	Excitation of molecular vibrations		494
§8.	Dissociation of diatomic molecules .		498
§9.	Shock waves in air		502
§10.	Ionization in a monatomic gas		505
§11.			513
§12.	Shock waves in a plasma		515
§13.	Polarization of a plasma and the creation of an electric field in a shock wave		522
3. I	Radiant heat exchange in a shock front		526
§14.	Qualitative picture		526
§15.	Approximate formulation of the problem of the front structure		531
§16.	The subcritical shock wave		535
§17.	The supercritical shock wave		539
§18.	Shock waves at high energy densities and radiation pressures		543

	Dynamics of a nonequilibrium gas	547
§1.	The gasdynamic equations in the absence of thermodynamic equilibrium .	547
§2.	Entropy increase	551
§3.	Anomalous dispersion and absorption of ultrasound	553
<u></u> §4.	The dispersion law and the absorption coefficient for ultrasound	559
2. (	Chemical reactions	564
§5.	Oxidation of nitrogen in strong explosions in air	564
	Disturbance of thermodynamic equilibrium in the sudden xpansion of a gas into vacuum	571
§6.	Sudden expansion of a gas cloud	571
§7.	Freezing effect	573
§8. §9.	Disturbance of ionization equilibrium	577
9-4	disturbance of ionization equilibrium	579
4. J	apor condensation in an isentropic expansion	585
§10.	Saturated vapor and the origin of condensation centers	585
§11.	The thermodynamics and kinetics of the condensation process	588
§12. §13.	Condensation in a cloud of evaporated fluid suddenly expanding into vacuum On the problem of the mechanism of formation of cosmic dust. Remarks on	591
	laboratory investigations of condensation	595
IX.		plo-
	sions in air	
1. I	sions in air Luminosity of strong shock fronts in gases	598
	<b>Cuminosity of strong shock fronts in gases</b> Qualitative dependence of the brightness temperature on the true	598
	<b>Cuminosity of strong shock fronts in gases</b> Qualitative dependence of the brightness temperature on the true temperature behind the front	
§1. §2.	Juminosity of strong shock fronts in gases         Qualitative dependence of the brightness temperature on the true         temperature behind the front         Photon absorption in cold air	598 603
§1.	Juminosity of strong shock fronts in gases         Qualitative dependence of the brightness temperature on the true         temperature behind the front         Photon absorption in cold air         Maximum brightness temperature for air	598 603
§1. §2.	Juminosity of strong shock fronts in gases         Qualitative dependence of the brightness temperature on the true         temperature behind the front         Photon absorption in cold air	598 603 600
