

CONTENTS

SYMBOLS	xv
1. PHYSICAL NATURE OF GAS ATOMS AND MOLECULES	1
1.1. Structure of Atoms,	1
1.2. Structure of Diatomic Molecules,	8
1.3. Classical Description of Diatomic Molecules,	18
Exercises,	25
References,	26
2. TRANSITIONS OF INTERNAL STATES	43
2.1. Collisional Transitions in Atoms,	43
2.2. Collisional Transitions in Molecules by Heavy-Particle Impact,	51
2.3. Collisional Transitions in Molecules by Electron Impact,	67
2.4. Classical Trajectory Theory of Molecular Excitation,	71
2.5. Radiative Transitions,	76
Exercises,	80
References,	81
3. FORMULATION OF MASTER EQUATION	89
3.1. Formulation of Relaxation in Atomic Systems,	89
3.2. Application of Relaxation in Atomic Systems,	92

3.3.	Classical Formulation of Molecular Relaxation,	97
3.4.	Reaction, Vibrational Energy Removal, and Vibrational Relaxation Rates,	103
3.5.	Electronic Excitation, Non-Quasi-Steady-State Distribution and Rates,	111
	Exercises,	115
	References,	116
4.	FORMULATION OF CONSERVATION EQUATIONS	119
4.1.	Internal Energies in Nonequilibrium,	119
4.2.	Energy Exchanges among Different Modes,	124
4.3.	Mass and Momentum Conservation Equations,	129
4.4.	Energy Conservation Equations,	133
4.5.	Chemical Reaction Rate Expressions,	136
4.6.	Wall Boundary Conditions for Chemical Variables,	139
	Exercises,	142
	References,	143
5.	CHEMICAL REACTIONS IN COMPUTATIONAL FLUID DYNAMICS	145
5.1.	Setting up Computational Equations,	145
5.2.	Fast Chemical Reactions,	149
5.3.	Coupling between Fluid Motion and Chemical Reactions,	154
5.4.	Wave Propagation,	160
5.5.	Pitfalls and Tricks,	165
	Exercises,	169
	References,	170
6.	BEHAVIOR OF AIR FLOWS IN NONEQUILIBRIUM	171
6.1.	Normal Shock in Air at Low Hypersonic Mach Numbers,	171
6.2.	Normal Shock in Air at High Hypersonic Mach Numbers,	178
6.3.	Expanding Flows,	185
6.4.	Effects of Nonequilibrium on Flow Field and Pressure Distribution,	194
6.5.	Nonequilibrium in Base Flow and Wakes,	203
6.6.	Convective Heat Transfer Rates and Wall Catalysis,	206
	References,	214

7. EXPERIMENTAL ASPECTS OF NONEQUILIBRIUM FLOW	219
7.1. Radiation from Air and Its Determination,	219
7.2. Line Profiles, Emission, and Absorption in Nonequilibrium Flows,	224
7.3. Chemical Phenomena in High Enthalpy Wind Tunnels,	233
7.4. Chemical Phenomena in Impulse Facilities,	240
References,	254
8. REVIEW OF EXPERIMENTAL RESULTS	255
8.1. Rate Coefficient Data for Reactions of Neutral Species,	255
8.2. Rate Coefficient Data for Reactions Involving Charged	
Particles,	268
8.3. Laboratory Measurements of Radiation,	281
8.4. Flight Measurements of Radiation and Electrons,	293
8.5. Flight Aerodynamic Data,	306
References,	316
9. GAS-SOLID INTERACTION	329
9.1. Structure of Solids,	329
9.2. Gas-Surface Equilibrium,	333
9.3. Kinetics of Adsorption, Desorption, Evaporation, and	
Condensation,	339
9.4. Surface-Catalytic Recombination,	344
9.5. Gas-Surface Reactions and Roughness,	349
References,	352
INDEX	355
