

The discretization of the 2D incompressible Navier–Stokes equations on a co-located grid P. Wilders and W. Couzy	503
---	-----

Session V. Two-Phase Flow and Combustion

Numerical simulation of the 3D turbulent flow around the combustor dome of an aircraft engine G. Brun, M. Buffat, S. Aubert and J.L. Schultz	511
The application of CFD to the modelling of fires in complex geometries A.D. Burns, D.S. Clarke, P. Guilbert, I.P. Jones, S. Simcox and N.S. Wilkes	517
Modeling of fluid flow and coal combustion in industrial furnaces applying a domain decomposition method B. Epple, U. Schnell and R. Schneider	525
A 3D multi-block structured version of the KIVA 2 code C. Habchi and A. Torres	533
A control volume finite element method for two-dimensional dilute fluid–solid particle flows C. Masson and B.R. Baliga	541
Efficient computation of the pre-asymptotic behaviour of unstable two-phase flow problems W.A. Mulder	549
Analysis of two fast-chemistry combustion models and turbulence modeling in variable density flow J. Nisbet, L. Davidson and E. Olsson	554
A high resolution approach to two-phase reactive flows in two dimensions W. Speares and E.F. Toro	565
Three-dimensional overlapping grids for internal combustion engine geometries J.Y. Tu and L. Fuchs	573

Colour Section

Volume II

Session VI. Internal Flows

A robust inverse inviscid method for airfoil design P. Chaviaropoulos, V. Dedoussis and K.D. Papailiou	581
Numerical simulation of unsteady incompressible viscous axisymmetric internal flow with swirl M. Hafez and E. Shabana	589
Numerical simulation of secondary flows and longitudinal roll-cell structures in rotating channels A.E. Khodak, A.I. Kirillov, V.V. Ris and E.M. Smirnov	597
Inverse method for transonic cascade and channel design using moment function formulation G.-L. Liu and J.H. Guo	605
Validation of viscous and inviscid computational methods around axial flow turbine blades B. Petot and A. Fourmaux	611

Complex 3D flow prediction in advanced exhaust system using Navier–Stokes analysis R.K. Rout, C.R. Bobba and S. Ying	619
TIGER: A graphically interactive grid system for turbomachinery applications M.-H. Shih and B.K. Soni	627
Application of Roe’s method for the simulation of viscous flow in turbomachinery T. Siikonen and H. Pan	635

Session VII. Compressive Flows I

An improved finite element method for the solution of the compressible Euler and Navier–Stokes equations G.S. Baruzzi, W.G. Habashi and M.M. Hafez	643
Navier–Stokes computations around a realistic fighter configuration T. Berglind and P. Eliasson	651
An unsplit implicit–explicit Godunov method for compressible gas dynamics J.P. Collins, P. Colella and H.M. Glaz	659
Error indicators and adaptive finite elements for transonic flows U. Göhner, G. Warnecke and W. Wendland	667
Implicit multidomain calculation of viscous transonic flows without artificial viscosity or upwinding K. Khalfallah, G. Lacombe, A. Lerat, A. Raulot and Z.N. Wu	675
High-lift calculations using Navier–Stokes methods T. Larsson	683
Permeable wall boundary conditions for transonic airfoil design O. Leonard and R. Van den Braembussche	689
A modular system for computational fluid dynamics D.R. McCarthy, D.W. Foutch and G.E. Shurtleff	697
Comparison of numerical methods for the compressible Navier–Stokes equations B. Sjögreen	705
On the prediction of transonic unsteady flows using second order time accuracy M.P. Thomadakis and S. Tsangaris	711
Riemann-solver adaptation for the steady supersonic Euler equations E.F. Toro, J. Orozco, N.J. Hill and C.C. Chou	719
Implicit solution of Reynolds-averaged Navier–Stokes equations for supersonic jets on adaptive mesh D. Vandromme and A. Saouab	727
Multigrid/multiblock method for transonic potential flow around wing/body/nacelle configurations including a slipstream D. Wang and S.G. Hedman	733
Computation of inviscid and viscous flows using Runge-Kutta time-stepping scheme with various artificial viscosity concepts A. Wiedermann and I. Teipel	741

Transonic flow computations using a modified SIMPLE code based on a collocated grid arrangement G. Zhou and L. Davidson	749
--	-----

Session VIII. Compressive Flows II

Implicit upwind-Euler solution algorithms for unstructured-grid applications J.T. Batina	757
Eigenvalue analysis of the convergence behaviour of an Euler method W. Cazemier, J.I. van den Berg and A.E.P. Veldman	765
High-speed oscillatory flow over multiple cavities D.R. Emerson	773
2-D and 3-D numerical simulation of a supersonic inlet flowfield S. Enomoto and C. Arakawa	781
Numerical comparison of outflow boundary conditions for the simulation of unsteady compressible mixing layers J.L. Estivalezes and E. Eradyn	789
Multigrid solution for the compressible Euler equations by an implicit characteristic-flux-averaging A. Kanarachos and I. Vournas	795
An extended Lagrangian method for subsonic flows M.-S. Liou and C.Y. Loh	803
Mesh adaptation with a fully multidimensional FCT algorithm for general curvilinear coordinates A. Rompteaux, J.L. Estivalezes and C. Perrin	809
Transonic vortical flow predicted with a structured multiblock Euler solver S. Santillan and V. Selmin	815
An unstructured node centered scheme for the simulation of 3-D inviscid flows V. Selmin, E. Hettena and L. Formaggia	823
Computation of compressible low Mach number flow J. Sesterhenn, B. Müller and H. Thomann	829
Numerical investigation of axisymmetric compressible viscous flow S. Tsangaris, M.P. Thomadakis and A. Pentaris	835
Solution of the compressible Euler equations with higher order ENO-schemes on general unstructured meshes P. Vankeirsbilck and H. Deconinck	843
An innovative algorithm to accurately solve the Euler equations for rotary wing flow S. Wagner and E. Krämer	851

Session IX. Grid Generation and Adaption

Numerical resolution on a massively parallel computer of a test problem in meteorology using a domain decomposition algorithm J.-D. Benamou and Y. Brenier	859
---	-----

Some subdomain algorithms and their parallel implementation for solving incompressible Navier–Stokes equations	
H.C. Boisson, I. d’Ast and P. Spiteri	867
SAUNA: A system for grid generation and flow simulation using hybrid structured/unstructured grids	
P.N. Childs, J.A. Shaw, A.J. Peace and J.M. Georgala	875
A cartesian grid finite element method for aerodynamics of moving rigid bodies	
Q.V. Dinh, B. Mantel and J.W. He	883
Grid adaption for problems in computational fluid dynamics	
R. Hagmeijer and K.M.J. De Cock	891
Multi-block finite volume calculation of compressible flow past aerodynamic configurations	
K.M. Lee, M. Damodaran, J.L. Tan and A.K.H. Lee	899
Parallel implementation of an algorithm for Delaunay triangulation	
M.L. Merriam	907
A 2D parallel multiblock Navier–Stokes solver with applications on shared- and distributed-memory machines	
C. Mensink and H. Deconinck	913
Grid generation for complex aerodynamic bodies using an interactive grid generation system	
L.-Y. Ong and K.-M. Lee	921
Grid generation: algebraic and partial differential equations techniques revisited	
B.K. Soni	929
Surface grid generation for multi-block structured grids	
S.P. Spekreijse, J.W. Boerstoel, J.L. Kuyvenhoven and M.J. van der Marel	937
Adaptive solutions for compressible flows on unstructured, strongly anisotropic grids	
R. Vilsmeier and D. Hänel	945
Software design of a multi-block, multi-zone, Navier–Stokes solver	
M.E.S. Vogels	953
Efficient three-dimensional grid generation using the Delaunay triangulation	
N.P. Weatherill and O. Hassan	961
 Session X. Boundary Layers	
A method of separation of variables for laminar channel flow solution	
F. Al-Bender and H. Van Brussel	969
An easy test-case for a Navier–Stokes solver	
D. Dijkstra and J.G.M. Kuerten	977
 Session XI. Environment	
A comparison of differential systems for smooth oceanographic flows	
G.L. Browning, W.R. Holland and H.-O. Kreiss	985
Arbitrary Lagrangian–Eulerian finite element analysis for flow-induced vibration of rigid body	
K. Edamoto and M. Kawahara	993

Inverse problems for the nonstationary prelinear filtration model S. Migorski and R. Schaefer	1001
Free surface flow of a dense, natural cohesive sediment suspension E.A. Toorman and J.E. Berlamont	1005
Three-dimensional groundwaterflow modelling for the calculation of capture zones around extraction sites E.J.M. Veling	1013

Session XII. Non-Newtonian Flows

Finite element method for the approximation of viscoelastic fluid flow with a differential constitutive law J. Baranger and D. Sandri	1021
The normal stress amplifier: a numerical simulation B. Debbaut	1027
Wire-coating die design: a three-dimensional implicit formulation V. Legat and J.M. Marchal	1035
Computer simulation of viscoelastic flows using a new class of finite elements V. Ruas, J.H. Carneiro de Araújo and M.A.M. Silva Ramos	1039
Legendre spectral elements for non-Newtonian fluid flows V. Van Kemenade and M. Deville	1047

Late Papers

Local time-stepping for a model problem in oil reservoir simulation J.R.P. Rodrigues and F. Dickstein	1053
Supersonic vortical flows around an ogive-cylinder: laminar and turbulent computations M. Borrel, P. d'Espiney and C. Jouet	1061
High performance parallelized implicit Euler solver for the analysis of unsteady aerodynamic flows C. Borel and M. Bredif	1069
Structured grid variational adaption: reaching the limit? O.-P. Jacquotte and G. Coussement	1077
Hypersonic Navier–Stokes computations about complex configurations C. Lacor, P. Alavilli, Ch. Hirsch, P. Eliasson, I. Lindblad and A. Rizzi	1089
Numerical simulation for solving a problem solar wind–earth magnetopause interaction B. Azarenok	1097
Three-dimensional finite volume methods for flows. Correlation of conservativeness and group invariance A.S. Shvedov	1103
Non-equilibrium viscous air and carbon dioxide hypersonic flows about blunted bodies Yu.P. Golovachov	1107
The application of high-order Godunov scheme to supersonic flow Ma Da-Wei and Li Hong-Zhi	1113

Rarefied numerical aerodynamic tools for reentry problems M.S. Ivanov, S.G. Antonov, S.F. Gimelshein and A.V. Kashkovsky	1121
GMRES acceleration of kinetic flux vector split (KFVS) Euler code S.M. Deshpande and A.K. Dass	1129
Numerical simulation of chemically-reacting polymer flows L. Lefebvre and R. Keunings	1133
Numerical simulation of non-Newtonian flow on MIMD parallel computers R. Aggarwal, P. Henriksen, R. Keunings, D. Vanderstraeten and O. Zone	1139
Numerical simulation of turbulent flows by a mixed model A.P. Gonze, M. Crochet and M. Deville	1147
Navier Stokes simulation of turbulent vortex high-Re-number flows over a delta wing A. Rizzi, C. Eldem and J. Vos	1151

Colour Section
