

CURRENT TOPICS ON MOLECULAR EVOLUTION
CONTENT

	Page
Preface	3
Part I. Molecular Phylogeny	
1 Origin of Hawaiian drosophilids inferred from alcohol dehydrogenase gene sequences Koichiro Tamura, Gakuta Toba, Jecheol Park and Tadashi Aotsuka	9
2 Opsin evolution in crayfishes: effects of functional constraints Keith A. Crandall and Thomas W. Cronin	19
3 Phylogenetic utility of mitochondrial transfer RNA genes for deep divergence in animals Yoshinori Kumazawa and Mutsumi Nishida	29
4 Phylogenetic relationships and DNA sequence divergence of Eastern Asian and Eastern North American disjunct plants Jun Wen, Robert K. Jansen and Elizabeth A. Zimmer	37
5 Nucleotide substitutions in the hominoid mitochondrial DNA Rumi Kondo, Naoyuki Takahata and Satoshi Horai	45
6 A rational choice for character weighting in parsimony analyses of eutherian mammal orders Marc W. Allard and James M. Carpenter	53
7 Markov model of amino acid substitution in mitochondrial proteins and maximum likelihood inference of molecular phylogeny Jun Adachi and Masami Hasegawa	61
8 Ancient patterns of arthropod evolution are recorded in mitochondrial genome rearrangements Jeffrey L. Boore	69
9 Tracking the evolutionary history of microsatellite locus located in the HLA-DQA1/DQB1 class II region: a phylogenetic approach Li Jin, Claudia Macaubas, Joachim Hallmayer, Akinori Kimura and Emmanuel Mignot	79
10 DNA polymorphisms shared among different loci of the major histocompatibility complex genes	89

- 11 Can *RBCL* tell us the phylogeny of green plants? 97
Kunihiko Ueda and Koichi Yoshinaga
- 12 Correlation between synonymous and nonsynonymous substitutions and variation in synonymous substitution numbers 105
Yosuo Ina
- 13 Evolutionary analyses when nucleotides do not evolve independently 115
Spencer V. Muse
- 14 Using a wrong substitution model in tree-making 125
Andrey Rzhetsky and Tatyana Sitnikova

Part II. Evolution of Adaptive Characters

- 15 T-Cell receptors and related variable region containing genes from non-tetrapod jawed vertebrates 139
Jonathan P. Rast, Noel A. Hawke, Michele K. Anderson and Gary W. Litman
- 16 Studies of the early evolution of immunoglobulin genes 151
Tatsuya Ota, Martin Margittai, Jonathan P. Rast, Ronda T. Litman, Gary W. Litman and Chris T. Amemiya
- 17 Organization and evolution of immunoglobulin genes, and identification of genes involved in regulation and ontogeny of the immune system 159
Chris T. Amemiya, Tatsuya Ota, Jonathan P. Rast, Leonard I. Zon and Gary W. Litman
- 18 Short and long term evolution of *Mhc* class II B genes in birds: first glimpses 169
Scott V. Edwards
- 19 Intensity of overdominant selection at the major histocompatibility complex loci 179
Yoko Satta, Colm O'hUigin, Naoyuki Takahata and Jan Klein
- 20 Decrypting the structure of cytotoxic T lymphocyte epitopes with complex peptide libraries 189
Keiko Udaka, Karl-Heinz Wiesmüller, Stefan Kienle, Günther Jung and Peter Walden
- 21 Ancient evolutionary origin of homeodomains: studies on yeasts, plants and animals 199
Claudia Kappen

- 22 Molecular genetic dissection of developmental stability in *Drosophila* 213
Greg Gibson
- 23 Role of the MI gene in differentiation and transdifferentiation of pigmented epithelial cells 221
Makoto Mochii and Goro Eguchi
- 24 Molecular adaptation: a phylogenetic approach to the evolution of the small heat shock proteins in plants 229
Elizabeth R. Waters and Elizabeth Vierling
- 25 A phylogenetic analysis of the *META*-cleavage pathway for the aerobic degradation of aromatic compounds 237
Michael Roberts, Michihisa Maeda and Toshiaki Kudo
- 26 DNA polymorphism and evolutionary history of the *PGI* locus in *Dioscorea Tokoro*, a wild yam species 245
Ryohei Terauchi, Toru Terachi and Naohiko T. Miyashita
- 27 Isolation of mating behavior mutations in *Drosophila melanogaster* 249
Eiji Nitasaka
- 28 Genetic study of species differences as observed as loss of bristles in interspecific hybrids of *Drosophila* 255
Toshiyuki S. Takano
