

Contents

Introduction	vii
Chapter 1 FUNDAMENTAL CONCEPTS	1
1.1 Introduction	1
1.2 Sound Field	6
1.3 Energy of Sound Waves	17
1.4 Plane and Spherical Waves	21
1.5 Sinusoidal Waves	26
1.6 Analogies	34
1.7 Logarithmic Scales and Quantities	41
1.8 Characterization and Representation of Sounds	48
Chapter 2 SOUND SOURCES	71
2.1 Introduction	71
2.2 Theoretical Sources	73
2.3 Diffraction at Emission	95
2.4 Models	106
2.5 Directivity	112
2.6 Arrays	122
2.7 Pistons	135
Chapter 3 PROPAGATION	151
3.1 Introduction	151
3.2 Sound Attenuation	153
3.3 Effects of Interfaces	159
3.4 Diffraction	176
3.5 Propagation in the Atmosphere	181
3.6 Propagation under the Sea	187
Chapter 4 PROPAGATION SYSTEMS	197
4.1 Introduction	197
4.2 Sound Field in an Enclosure	198

4.3	Uniform Pipes	206
4.4	Horns	219
4.5	Vibrating Bodies	230
Chapter 5 MECHANICAL AND ACOUSTICAL SYSTEMS		245
5.1	Introduction	245
5.2	Mechanical Systems	247
5.3	Acoustical Systems	263
5.4	Representation of Systems by Diagrams	288
Chapter 6 TRANSDUCERS		309
6.1	Introduction	309
6.2	Electrodynamic Conversion	316
6.3	Electrostatic Conversion	325
6.4	Electromagnetic Conversion	339
6.5	Magnetostrictive Conversion	346
6.6	Piezoelectric Conversion	353
Chapter 7 LOUDSPEAKERS		375
7.1	Electrodynamic Loudspeakers	375
7.2	Loudspeaker Systems	397
7.3	Driver Design	446
7.4	Horn Loudspeakers	475
Chapter 8 MICROPHONES		487
8.1	General Properties	487
8.2	Microphone Theory	499
8.3	Microphone Design	518
Chapter 9 SOUND RECORDING		555
9.1	Introduction	555
9.2	Disks	556
9.3	Magnetic Recording	600
9.4	Digital Audio	642
Chapter 10 HUMANS AND SOUND		665
10.1	Hearing	665
10.2	Applications	686
Chapter 11 BASIC ROOM ACOUSTICS		703
11.1	Introduction	703
11.2	Wave Acoustics	704
11.3	Geometrical Acoustics	710
11.4	Sabine Acoustics	715
Glossary		729
Bibliography		735
Select Bibliography		745
Index		747
