

Table of Contents

- 1. Introduction 1
 - 1.1 What is Image Processing?..... 1
 - 1.2 Descriptions of Images 2
 - 1.3 Sources and Types of Images 3
 - 1.4 Processing Images 3
 - 1.5 Purposes of Processing..... 4
 - 1.6 Image Quality 5
 - 1.7 A Generalized Image Processing System..... 6
 - 1.7.1 Source/Object..... 6
 - 1.7.2 Optical System 8
 - 1.7.3 The Camera..... 8
 - 1.7.4 Source/Sink Coder 9
 - 1.7.5 Channel Coder 10
 - 1.7.6 Channel..... 10
 - 1.7.7 Channel Decoder 10
 - 1.7.8 Source/Sink Decoder 11
 - 1.7.9 The Display 11
 - 1.8 A Simple Television System 12
 - 1.8.1 Choice of Components..... 13
 - 1.8.2 Scanning Standards 13
 - 1.8.3 Sampling in the Time Domain..... 14
 - 1.8.4 Explaining Motion Rendition and Flicker 15
 - 1.8.5 Sampling in the Space Domain 18
 - 1.8.6 Analog Transmission 18
 - 1.9 Lessons for the System Designer..... 19
- 2. Light and Optical Imaging Systems 20
 - 2.1 Light Sources 20
 - 2.2 Photometry..... 24
 - 2.3 Luminous Transfer of Simple Optical Systems 26
 - 2.4 Some Nonideal Behavior of Simple Optical Systems..... 28
 - 2.4.1 The Cosine⁴ Law and Vignetting 28
 - 2.4.2 Aberrations 29
 - 2.4.3 Diffraction 30
 - 2.5 Fourier Optics and the Modulation Transfer Function 32
 - 2.5.1 The Linearity of Optical Systems 32

2.5.2	The Spectrum of Images	33
2.5.3	The Aperture Effect	38
2.5.4	Temporal Video Signals	39
2.5.5	The Correlation Function and the Shape of the Spectrum	42
2.5.6	Concluding Remarks About the Video Spectrum	45
2.6	Quantum Phenomena and Related Noise Sources	46
2.6.1	The Quantum Nature of Light	46
2.6.2	Shot Noise	49
2.6.3	Other Noise Sources	50
2.7	Lessons for the System Designer	54
	Appendix 2.1	54
3.	Perception of Images	60
3.1	Seeing in the Dark	60
3.1.1	Visual Thresholds	62
3.2	Contrast Sensitivity	66
3.2.1	Lightness Curves	69
3.3	The Effect of Shape	71
3.3.1	Relationship Between Sharpness and Contrast	77
3.4	Masking	79
3.5	Temporal Phenomena	80
3.5.1	Frequency Response and Flicker	80
3.5.2	Motion Rendition	82
3.6	Lessons for the System Designer	85
4.	Sampling, Interpolation, and Quantization	86
4.1	Introduction	86
4.2	The Sampling Theorem	87
4.3	The Two-Dimensional Spectrum	91
4.4	Interpolation of Digital Images	92
4.5	The Presampling Filter	97
4.6	Hexagonal Sampling	97
4.7	Quantization	99
4.7.1	Amplitude of the Quantizing Noise	100
4.7.2	Randomization of the Quantization Noise	101
4.7.3	Filtering the Noise Spectrum	105
4.7.4	Combination of Filtering and Randomization	105
4.8	Lessons for the System Designer	105
5.	Compression	107
5.1	Introduction	107
5.2	Information-Preserving Coding	109

5.2.1	The Basis for Statistical Coding	109
5.2.2	Coding Based on Conditional Probability Distributions.	112
5.2.3	Noise as a Limit to the Efficiency of Entropy Coding...	113
5.2.4	The Variation of Entropy with Sampling Density	114
5.3	Graphics Coding	116
5.3.1	One-Dimensional Run-Length Coding	118
5.3.2	Two-Dimensional Coding	118
5.3.3	Some Practical Coding Systems and Their Performance as a Function of Resolution	120
5.3.4	CCITT Standard Codes	122
5.4	Coding of Continuous-Tone Images	124
5.4.1	Lossless Coding	124
5.4.2	Approximation in the Space Domain (Waveform Coding)	125
5.5	Lessons for the System Designer	137
6.	Image Processing in the Graphic Arts	139
6.1	Introduction	139
6.2	Type Composition	142
6.2.1	Type Casting Machines	142
6.2.2	Photocomposition	143
6.2.3	Text Editing Systems	144
6.2.4	Page Composition	145
6.3	Modern Plate Making	146
6.3.1	Letterpress	146
6.3.2	Lithography	147
6.3.3	Gravure	148
6.4	The Halftone Process	150
6.4.1	Introduction	150
6.4.2	The Photographic Halftone Process	151
6.4.3	Fundamental Considerations in Halftone Reproduction .	152
6.4.4	Electronic Screens	160
6.5	Lessons for the System Designer	172
	References	175
