

Contents

1. The Transport Equation	1
1-1 Introduction	1
1-2 Particle Interactions	2
Assumptions, 3	
Cross Section Definitions, 4	
Neutron Cross Sections, 7	
Gamma Ray Cross Sections, 8	
Scattered Particle Distributions, 10	
Fission Neutron Distribution, 14	
1-3 Particle Streaming	16
Particle Distributions, 16	
The Streaming-Collision Operator, 20	
Boundary Conditions, 25	
Inversion of the Streaming-Collision Operator, 27	
Streaming in Curvilinear Coordinates, 28	
1-4 Transport with Secondary Particles	34
Nonmultiplying Systems, 34	
Multiplying Systems without Delayed Neutrons, 38	
The Neutron Kinetics Equations, 39	
1-5 The Time-Independent Transport Equation	42
Fixed Source and Eigenvalue Problems, 43	
The α Eigenvalue, 45	
The k Eigenvalue, 46	
1-6 The Adjoint Transport Equation	47
Nonmultiplying Systems, 47	
Multiplying Systems, 52	

References	55
An Abbreviated List of Related Texts	56
Problems	57
2. Energy and Time Discretization	61
2-1 Introduction	61
2-2 The Multigroup Equations	61
Energy Separability, 63	
Multigroup Cross Section Evaluation, 68	
Alternative Derivation, 73	
2-3 Fixed Source Problems	78
Nonmultiplying Systems, 78	
Solution of Within-Group Equations, 80	
Acceleration of Within-Group Calculations, 83	
2-4 Criticality Calculations	90
Power Iteration Solution, 92	
Acceleration by Extrapolation Methods, 95	
Acceleration by the Rebalance Method, 95	
Synthetic Acceleration Methods, 97	
2-5 Time-Dependent Problems	103
Forms of the Kinetics Equations, 104	
Differencing of the Prompt Neutron	
Approximation, 106	
Delayed Neutron Kinetics, 108	
References	111
Problems	112
3. Discrete Ordinates Methods In One Spatial Dimension	116
3-1 Introduction	116
3-2 Angular Approximations	117
The Discrete Ordinates Formulation, 118	
Legendre Polynomial Approximations, 120	
Comparison of Angular Approximations, 123	
3-3 Spatial Differencing and Solution	127
Diamond Difference Equations, 128	
Spatial Truncation Error, 131	
Alternative Difference Schemes, 133	

3-4 Curvilinear Coordinates	135
Angular Discretization, 137	
Spatial Differencing, 140	
3-5 Acceleration	145
Coarse Mesh Rebalance, 145	
Synthetic Method, 147	
Comparison of Methods, 149	
References	151
Problems	153
4. Multidimensional Discrete Ordinates Methods	156
4-1 Introduction	156
4-2 Discrete Ordinates Quadrature Sets	156
Level Symmetric Quadrature, 158	
Quadrature with Reduced Symmetry, 162	
4-3 Difference Equations: Cartesian Coordinates	166
$x-y$ Geometry, 166	
$x-y-z$ Geometry, 172	
4-4 Difference Equations: Curvilinear Coordinates	175
Angular Discretization, 177	
Spatial Differencing, 180	
Acceleration Consideration, 185	
Infinite Cylindrical Geometry, 186	
4-5 Triangular Mesh Difference Equations	188
Space – Angle Differencing, 188	
Solution Algorithms, 192	
4-6 Ray Effects	194
The Ray Effect Phenomenon, 195	
Ray Effect Remedies, 198	
Errors from Ray Effects, 200	
References	203
Problems	205
5. Integral Transport Methods	208
5-1 Introduction	208
5-2 Derivation of the Integral Equations	209
The Angular Flux Equation, 209	
The Scalar Flux Equation, 211	

5-3 Slab Geometry	213
The Scalar Flux Equation, 213	
The Collision Probability Method, 215	
Slab Lattice Problems, 218	
5-4 Integral Transport in Two Dimensions	220
The Two-Dimensional Equations, 220	
Two-Dimensional Collision Probability Formulation, 225	
5-5 Application of Integral Transport Methods	228
Unit Cell Calculations, 230	
Response Matrix Formulation, 235	
5-6 Evaluation of Collision Probabilities	241
Ray Tracing Methods, 241	
Optical Reciprocity Relationships, 248	
References	252
Problems	254
6. Even-Parity Transport Methods	257
6-1 Introduction	257
6-2 The Even-Parity Transport Formulation	258
Derivation, 258	
Variational Formulation, 261	
The Ritz Procedure, 264	
6-3 Spatial Finite Elements	266
The Diffusion Approximation, 266	
Spatial Discretization in One Dimension, 268	
Spatial Discretization in Two Dimensions, 272	
6-4 Slab Geometry Transport Methods	278
The Variational Problem, 278	
Spatial Discretization, 279	
Treatment of the Angular Variable, 281	
6-5 Two-Dimensional Transport	285
Angular Approximation, 286	
Spatial Discretization, 289	
References	291
Problems	293

7. The Monte Carlo Method	296
7-1 Introduction	296
7-2 Probability Distribution Functions	299
Functions of a Single Random Variable, 299	
Distribution Sampling, 302	
Functions of Two Random Variables, 305	
7-3 Analog Monte Carlo Sampling	309
Tracking Procedure, 309	
Tallies, 310	
7-4 Error Estimates	313
Expectation Values, 314	
Variance, 315	
The Central Limit Theorem, 319	
7-5 An Example Calculation	321
Monte Carlo Calculations, 322	
Analytical Solution, 324	
7-6 Nonanalog Monte Carlo	327
Properties of Variance, 327	
Importance Sampling, 329	
Variance Reduction Methods, 331	
7-7 Tracking in Phase Space	339
Cross Sections and Collisions, 339	
Tallies, 343	
Geometrical Tracking, 346	
7-8 Criticality Calculations	350
Estimation of Multiplication, 351	
Error Evaluations, 354	
References	356
Problems	358
APPENDIXES	361
A Some Useful Mathematical Functions	361
References, 369	
B Truncation Error, Stability, and Convergence	370
