List of contributors	xi
Symbols and abbreviations	xiii
1 HOW REACTORS WORK <i>R. H. Flowers</i>	1
1 Introduction	2
2 Nuclear fission	4
3 Controlling the chain reaction	23
4 Nuclear power station design	27
5 Operating a nuclear power station	42
6 Some of the problems	47
7 Conclusions	48
Acknowledgement	49
References	49
2 REACTOR PHYSICS <i>J. R. Askew, C. G. Campbell, J. G. Tyror</i>	50
1 Reactor physics and its objectives	51
2 Processes of reactor physics	55
3 The evolution of reactor physics methods	76
4 Current status: thermal reactors	88
5 Current status: fast reactors	113
6 Future trends in reactor physics	129
Acknowledgements	131
Appendix A. Xenon-135	132
Appendix B. Delayed neutrons	133
Appendix C. The equivalence treatment of resonances in WIMS	135
3 GAS-COOLED REACTORS <i>K. H. Dent</i>	138
1 Introduction	139
2 The Magnox reactors	146
3 The advanced gas-cooled reactor	154
4 The high-temperature reactor	179
5 The past and the future of gas-cooled reactors	201
Acknowledgements	204
References	205
4 LIGHT WATER REACTORS <i>J. G. Collier</i>	208
1 Introduction	209
2 The use of light water as a reactor coolant	210

3	The development of the pressurized-water reactor	214
4	The development of the boiling-water reactor	224
5	Present-day pressurized-water reactors	233
6	Present-day boiling-water reactors	254
7	Safety aspects	262
8	Performance	276
9	Looking to the future	287
	Acknowledgements	295
	References	296
 5	 FAST REACTORS <i>A. M. Judd</i>	 297
1	Introduction	298
2	Fast and thermal reactors	298
3	Breeding	299
4	Description of a fast reactor	301
5	Reactor physics	302
6	Fuel elements	309
7	Reactor engineering	315
8	Safety	325
9	Development of fast reactors	330
	Suggestions for further reading	332
 6	 A REVIEW OF THE UKAEA INTEREST IN HEAVY WATER REACTORS <i>R. J. Symes</i>	 334
1	Introduction to the British heavy water reactor	335
2	Evolution of the SGHWR and its principal design features	337
3	Essential circuitry of the SGHWR	345
4	The construction of the Winfrith Prototype SGHWR	356
5	Operating experience at Winfrith since January 1968	358
6	Final assessment of the UK programme	365
7	A brief survey of heavy water power reactors in other countries	367
8	Research, test, and experimental reactors	379
	Suggestions for further reading	389
 7	 NOVEL REACTOR CONCEPTS <i>J. Smith</i>	 390
1	Introduction	391
2	The gas-cooled fast reactor	391
3	Liquid coolants	403
4	Fluid-fuel reactors	405
5	The current position	414
	Acknowledgements	414
	References	415

8 PROSPECTS FOR FUSION <i>P. A. Davenport</i>	416
1 Physics background	417
2 Fusion reactions	421
3 Basic problems	423
4 Towards a solution	424
5 Alternative approaches	426
6 Present status	437
7 Fusion reactors	445
8 Other applications	452
9 Future plans	454
Acknowledgements	458
Appendix. Terrestrial fusion fuel supplies	458
References	459
Suggestions for further reading	459
 GLOSSARY	 461
 INDEX	 497
