

CONTENTS

Executive Summary -----	1
Summaries of Working Groups -----	5
A. Plasma-Materials Interactions (PMI) and Activation ----- I Ib	7
B. High Heat Flux Problems in Present Large Tokamaks and Future Machines ----- I & II e	8
C. High Heat Flux Testing ----- II d	10
D. High Heat Flux Materials and Coatings ----- II a & II c	12
Members of Working Groups -----	14
 Session I Overview of Current Status -----	 15
" High Heat Flux Problems in Large Tokamaks "	
Heat Flux to the TFTR Movable Limiter ----- M. Ulrickson	17
Results of JT-60 OH Experiments Related to PMI/HHF ----- H. Nakamura	44
 Session II Discussion of Future Prospects -----	 51
Subsession II-a -----	53
" Coatings -their present status and future prospects as high heat flux materials- "	
Coatings - Status and Prospects as High Heat Flux Materials -- J. Whitley	55
Current Status of Low-Z Coatings and Problems Encountered in the Present Tokamaks ---- M. Fukutomi	72
Present Status of Low-Z Coating Development in JAERI K. Nakamura, T. Abe, K. Obara and Y. Murakami	81
Carbon Coating for Impurity Control in Fusion Devices by Glow Discharge Decomposition -- K. Inagawa, Y. Takahashi and A. Itoh	93
Preparation of TiC and Diamond Coatings for a High Heat Flux Material ----- S. Takatsu, K. Shibuki and N. Horie	95
Surface Precipitation and Its Application to Coatings ----- K. Yoshihara	97

On Retention and Reemission of Hydrogen in the Low-Z Coatings Formed in NRIM ---- M. Kitajima	99
Erosion Yield of Ti from a TiC-Deposited Graphite by Hydrogen Ion Bombardment at High Temperatures S. Sukenobu, Y. Gomay, H. Ohno and K. Morita	101
Subsession II-b -----	103
" Plasma Material Interaction - Interaction with hydrogen isotopes; Induced radioactivity- "	
Plasma - Material Interaction Issues for Graphite ----- K. Wilson	105
Low Activation Materials for First Wall of Fusion Reactors ----- T. Noda	175
Development of Low Activation Al-Li Alloys ----- K. Kamada	181
On the Estimation of Retention and Permeation of Hydrogen Implanted into Metals at High Temperature ---- T. Tanabe	193
Subsession II-c -----	203
" High Heat Flux Materials "	
High Heat Flux Materials ----- W. Gauster	203
Some Recent Research and Development of FRMs in Japan A. Kohyama and N. Igata	238
Comments on Future Prospects for High Heat Flux Materials ---- F. Clinard	252
Thermal Shock Behavior of Graphite for Limiter Applications --- M. Shibui	259
Ceramic Protection Materials for High Heat Flux ----- T. Mizoguchi	261
Some Aspects of the Fatigue Behavior of Molybdenum and Graphite as High Heat Flux Materials ----- K. Furuya	263
Large Size Single Crystalline Components of Mo and W ----- M. Okada	273
Neutron Irradiation Damage of Molybdenum ----- K. Abe	276
Subsession II-d -----	279
" High Heat Flux Testing -test facilities heat sources and heat loading procedures specimen configurations diagnostics- "	
High Heat Flux Testing ----- J. Whitley	281

Application of an Electron Beam Welder as a Heat Source for Disruption Simulation Experiments M. Seki, T. Tone and S. Yamazaki	321
Short Note on Rastered Electron Beam for High Heat Flux Testing ----- T. Uchikawa	334
Subsession II-e -----	339
" High heat Flux Components in Future Machines and Reactors -cooling thermal stress design- "	
High Heat Flux Materials Facilities and Testing for ICH Launcher Development ----- W. Gardner	341
CIT Parameters ----- M. Ulrickson	368
High Heat Flux Components in Future Machines Tore Supra ----- W. Gauster	372
Conceptual Design Study of Divertor Plates and First Wall in Fusion Experimental Reactor -- K. Kitamura, T. Kobayashi and H. Iida	395
Evaluation of Thermal Stress and Melting due to Plasma Disruption ----- K. Miya and H. Hashizume	405
Program -----	415
Participants -----	419
