

CONTENTS

I. CONVERGENCE AND SUMMABILITY

1.1.	Fourier's formulae	1
1.2.	Fourier transforms	3
1.3.	Generalized Fourier integrals	4
1.4.	The formulae of Laplace	6
1.5–6.	The formulae of Mellin	7
1.7.	Notation	9
1.8–9.	Fundamental theorems	11
1.10.	Monotonic functions	15
1.11.	Functions containing a periodic factor	17
1.12.	Oscillating functions	22
1.13.	The constant in Fourier's formula	24
1.14.	Fourier's single-integral formula	25
1.15.	Summability of integrals	26
1.16.	Summability of Fourier integrals	28
1.17.	Cauchy's singular integral	30
1.18.	Weierstrass's singular integral	31
1.19–20.	General summability	32
1.21–3.	Further summability theorems	36
1.24.	The integrated form of Fourier's formula	41
1.25.	The complex form of Fourier's integral	42
1.26.	Perron's formula	43
1.27.	Fourier's theorem for analytic functions	44
1.28.	Summability of the complex form	45
1.29.	Mellin's inversion formula	46
1.30.	The Laplace formulae	48

II. AUXILIARY FORMULAE

2.1.	Formalities	50
2.2–5.	Conditions for validity	54
2.6.	Transform of a resultant	59
2.7.	Mellin transforms	60
2.8–9.	Poisson's formula	60
2.10.	Examples	64
2.11.	Sine transforms	66
2.12.	More general conditions	66

III. TRANSFORMS OF THE CLASS L^2

3.1.	Plancherel's theory of Fourier transforms	69
3.2.	Fourier transforms, first method	70
3.3.	Fourier transforms, second method	73
3.4.	Fourier transforms, third method	75
3.5–8.	The Hermite polynomials	76
3.9.	Fourier transforms, fourth method	82

CONTENTS

3.10. Convergence and summability	83
3.11–12. Convergence almost everywhere	85
3.13. Theorems on resultants	90
3.14–15. Special theorems	92
3.16. Another case of Parseval's formula	94
3.17. Mellin transforms	94

IV. TRANSFORMS OF OTHER L -CLASSES

4.1–2. Transforms of functions of L^p	96
4.3. Proof of Theorem 74 for $p = 2k/(2k-1)$	98
4.4–5. Extension to general p	100
4.6. The Parseval formula	105
4.7. Theorems on resultants	106
4.8–9. Another extension of Plancherel's theorem	107
4.10. Another case of the Parseval formula	110
4.11. Failure of Theorems 75 and 79 for $p > 2$	111
4.12. Special conditions	113
4.13. Lipschitz conditions	115
4.14. Mellin transforms of the class L^p	118

V. CONJUGATE INTEGRALS: HILBERT TRANSFORMS

5.1. Conjugate integrals	119
5.2–9. Hilbert transforms of the class L^2	121
5.10–13. Hilbert transforms of the class L^p	132
5.14. The case $p = 1$	143
5.15. Lipschitz conditions	145
5.16. The allied integral	147
5.17. Application to Fourier transforms	148
5.18. Further cases of Parseval's formula	150

VI. UNIQUENESS AND MISCELLANEOUS THEOREMS

6.1–6. Uniqueness of trigonometrical integrals	152
6.7. Integrals in the complex form	164
6.8. Parseval's formula	166
6.9. Another uniqueness theorem	166
6.10–12. Special properties of transforms	169
6.13. Order of magnitude of transforms	174

VII. EXAMPLES AND APPLICATIONS

7.1. Cosine transforms	177
7.2. Sine transforms	179
7.3. The Parseval formulae	180
7.4. Some Bessel-function examples	182
7.5. Some integrals of Ramanujan	184
7.6. Some Γ -function formulae	186
7.7. Mellin transforms	190
7.8. Further gamma-function formulae	193
7.9. Bessel functions	196

CONTENTS

vii

7.10. Products of Bessel functions	198
7.11. Integrals involving Bessel functions	200
7.12. Some non-absolutely convergent integrals	204
7.13–14. Laplace transforms	206

VIII. GENERAL TRANSFORMATIONS

8.1–3. Generalization of Fourier's formulae	212
8.4. Examples	214
8.5. L^2 theory	220
8.6. Proof of Theorems 129, 130	222
8.7. Proof of Theorem 131	223
8.8. Necessity of the conditions	225
8.9. The unsymmetrical formulae	226
8.10. A convergence theorem	227
8.11. The resultant of two Fourier kernels	229
8.12–16. Convergence of k -integrals	232
8.17. Proof of Theorem 134	239
8.18. Hankel's theorem	240
8.19. Formulae derived from Hankel's theorem	242

IX. SELF-RECIPROCAL FUNCTIONS

9.1–3. Formalities	245
9.4. Functions of L^2	248
9.5–6. Functions of L^p	249
9.7. Analytic functions	252
9.8. More general conditions	252
9.9. A general theorem	255
9.10. Application	256
9.11. The second solution	259
9.12. Examples	260
9.13. Lattice-point formulae	265
9.14–17. Formulae connecting different classes of self-reciprocal functions.	267

X. DIFFERENTIAL AND DIFFERENCE EQUATIONS

10.1. Introduction	275
10.2–5. Ordinary differential equations	276
10.6–15. Partial differential equations	281
10.16–17. Differential-difference equations	298
10.18. Difference equations	301

XI. INTEGRAL EQUATIONS

11.1. Introduction	303
11.2. The homogeneous equation	305
11.3. Examples	307
11.4. Various forms	311
11.5. The equation with finite limits	311
11.6. Another type	314

CONTENTS

11.7. Laplace's integral equation	316
11.8. Stieltjes's integral equation	317
11.9. Stieltjes's moment problem	320
11.10-11. Finite limits	322
11.12-13. Examples	328
11.14. Abel's integral equation	331
11.15. An equation of Fox	332
11.16. 'Dual' integral equations	334
11.17. The method of Hopf and Wiener	339
11.18. An equation of A. C. Dixon	342
11.19. A problem of radiative equilibrium	344
11.20. The limiting form of Milne's equation	346
11.21. Bateman's equation	349
11.22-3. Kapteyn's equation	352
11.24. Solution of Kapteyn's equation	355
11.25. A differential equation of fractional order	358
11.26. A probability problem	363
11.27. A problem in statistical dynamics	367
BOOKS AND MONOGRAPHS	370
ORIGINAL MEMOIRS REFERRED TO IN THE TEXT	371
INDEX	393
