<b>Preface</b>		<b>vii</b>
<b>Chapter 1</b>	<b>Introduction to scattering theory</b>	<b>1</b>
	1.1 The crossed beam experiment	1
	1.2 Waves and particles	3
	1.3 Trajectories, wave packets and stationary states	6
	1.4 Semi-classical theory	11
	1.5 Laboratory and centre-of-mass coordinates	13
	1.6 Summary of systems to be examined	16
<b>Chapter 2</b>	<b>Elastic scattering</b>	<b>19</b>
	2.1 Classical trajectories for the central force problem	19
	2.2 Collision cross-sections	26
	2.3 Quantum scattering by a central force	31
	2.4 A semi-classical view of elastic scattering	41
	2.5 Comparison of classical, semi-classical and quantum cross-sections	45
	2.6 The inversion problem	48
<b>Chapter 3</b>	<b>Inelastic collisions</b>	<b>50</b>
	3.1 Introduction	50
	3.2 The classical treatment of atom–diatomic molecule collinear collisions	51
	3.3 Numerical integration of trajectories, and action-angle variables	54
	3.4 The multichannel equations	60
	3.5 Quantum mechanical treatment of collinear atom–diatomic molecule collisions	64
	3.6 The semi-classical approach to inelastic collisions	69
	3.7 Approximate solutions of the coupled-channel equations	72

<b>Chapter 4</b>	<b>Rotationally inelastic collisions</b>	<b>79</b>
	4.1 Classical rotational energy transfer	79
	4.2 Classical rotational cross-sections	83
	4.3 The scattering matrix	89
	4.4 Quantum theory of rotational inelastic scattering	93
	4.5 Approximate schemes for rotational inelasticity	100
<b>Chapter 5</b>	<b>Reactive scattering</b>	<b>108</b>
	5.1 Coordinates for reactive collisions	108
	5.2 Classical trajectories for reactions	115
	5.3 Potential energy functions and reaction cross-sections	122
	5.4 Quantum theory of reactive scattering	131
	5.5 Statistical theories	138
<b>Chapter 6</b>	<b>Electronic transitions</b>	<b>142</b>
	6.1 Beyond the Born–Oppenheimer approximation	142
	6.2 Atom–atom collisions	147
	6.3 Classical trajectory methods	158
<b>Chapter 7</b>	<b>Scattering from surfaces</b>	<b>165</b>
	7.1 Introduction	165
	7.2 Atom–rigid surface scattering	166
	7.3 More complicated problems	172
<b>Appendix 1</b>	<b>The JWKB approximation</b>	<b>176</b>
<b>Appendix 2</b>	<b>Partial wave decomposition of the scattering amplitude</b>	<b>179</b>
<b>Appendix 3</b>	<b>The use of Jost functions to calculate the S matrix for inelastic scattering</b>	<b>181</b>
<b>Appendix 4</b>	<b>Numerical methods</b>	<b>183</b>
<b>Appendix 5</b>	<b>Effective impact parameter for a three-dimensional surface</b>	<b>186</b>
<b>Appendix 6</b>	<b>Hamilton's equations for A + BC classical trajectory calculations</b>	<b>188</b>
<b>Bibliography</b>		<b>191</b>
<b>Subject index</b>		<b>195</b>
