LIST OF CONTRIBUTORS	vii
PREFACE	ix
CONTENTS OF VOLUMES 12 AND 17	xi

Glass Surfaces

H. H. Dunken

List of Acronyms	1
I. Introduction	2
II. Structure and Bonding in the Surface Region	3
III. Selected Methods of Surface Analysis	16
IV. Reactions at Glass Surfaces	29
V. Conclusion	67
References	68

Water in Glass

Roger F. Bartholomew

I. Introduction	75
II. Techniques for Adding Water to Glass	78
III. Determination of Water Content	82
IV. Structural Aspects of Water in Glass	86
V. Hydration Kinetics	97
VI. Physical and Chemical Properties	105
VII. Applications	121
VIII. Summary	123
References	125

Gel Method for Making Glass

Sumio Sakka

I. Introduction	129
II. Process of Preparation of Oxide Glasses from Metal Alkoxides	130
III. Materials Prepared by the Alkoxide Method	144
IV. Characterization of Glasses Prepared from Alkoxides	160
V. Sol-Gel Method Using Materials Other Than Alkoxides	164
VI. Conclusion	165
References	165

Fracture and Fatigue of Glass

Robert H. Doremus

I. Introduction	170
II. Fracture—Experimental Results	171
III. Fracture Criteria, Models, and Explanations	188
IV. Fatigue	205
Appendix: Analysis of Variance of Fatigue Equations	234
References	235

Stresses in Glass-to-Metal Seals

Arun K. Varshneya

I. Introduction	242
II. Measurement of Stresses in Glass-to-Metal Seals	244
III. Development of Stresses in Seals	250
IV. Estimation of the Contraction Mismatch δ	255
V. Calculation of Stresses in Various Geometries	271
VI. Combined Analysis of Stresses in Seals	300
VII. Concluding Remarks	303
References	304

INDEX	307
