LIST OF CONTRIBUTORS	xi
PREFACE	xiii

1 Grain-Boundary Embrittlement of Ni and Ni Alloys

Robert A. Mulford

I. Introduction	1
II. Embrittlement at Low and Intermediate Temperatures	3
III. Hot Workability of Ni Alloys	11
IV. Beneficial Elements	14
V. Summary	17
References	18

2 Intergranular Fracture in Ferrous Alloys in Nonaggressive Environments

C. L. Briant and S. K. Banerji

I. Introduction	21
II. Experimental Studies	23
III. Theoretical Studies	46
IV. Future Research	55
References	56

3 The Effect of Second-Phase Particles on Fracture in Engineering Alloys

A. M. Ritter and C. L. Briant

I. Introduction	59
II. Steels	61

III. Aluminum Alloys	70
IV. Superalloys	76
V. Titanium Alloys	116
VI. Concluding Remarks	118
References	119

4 Embrittlement of Ferrous Alloys under Creep Conditions

D. P. Pope

I. Introduction	125
II. Effects of Temperature, Strain Rate, and Stress State	127
III. Effects of Microstructure	134
IV. Grain-Boundary Impurity Effects	143
V. Summary	151
References	152

5 Environmental Embrittlement of High Temperature Alloys by Oxygen

D. A. Woodford and R. H. Bricknell

I. Introduction	157
II. Oxygen Embrittlement by Prior Exposure	159
III. Prevention of Embrittlement	174
IV. Mechanisms of Oxygen Embrittlement	178
V. Embrittlement during Melting and Processing	185
VI. Embrittlement during Creep and Fatigue Testing	187
VII. Implications for Design and Life Prediction	194
References	196

6 Corrosion of Iron-Base Alloys

T. M. Devine

I. Foreword	201
II. Introduction to the Electrochemistry of Corrosion	202
III. Corrosion of Iron	208
IV. Stainless Steels	217
References	229

7 Stress Corrosion Cracking of Iron-Base Alloys in Aqueous Environments

F. P. Ford

I. Introduction	235
II. Subcritical Crack Propagation Mechanisms in Ductile Steel–Aqueous Environment Systems	237
III. Mechanistic Aspects of Cracking in Ductile Carbon, Low-Alloy, and Stainless Steels in Aqueous Environments	253
IV. Conclusions	265
References	266

8 Hydrogen Embrittlement

Howard G. Nelson

I. Introduction	275
II. The Process of Hydrogen Embrittlement	277
III. Hydrogen Embrittlement of Specific Structural Alloys	298
IV. Methods of Reducing the Susceptibility to Hydrogen Embrittlement	354
References	356

9 Liquid Metal Embrittlement

M. H. Kamdar

I. Introduction	362
II. Occurrence of Liquid Metal Embrittlement	366
III. Mechanisms of Liquid Metal Embrittlement	370
IV. Brittle Fracture in Liquid Metal Environments	382
V. Effects of Metallurgical and Physical Factors	392
VI. Effects of Liquid Metal Environments	415
VII. Summary	425
VIII. Suggestions for Future Work	427
References	429
Appendix. A Summary of Literature	431
Appendix References	455

10 Irradiation Embrittlement

J. Russell Hawthorne

I. Introduction	462
II. Potential Factors Influencing Alloy Irradiation Response	466

III. Radiation Effects Trends: Early Studies	467
IV. Observations of Variable Radiation Resistance	483
V. Sources of Variable Radiation Resistance	487
VI. Development of Improved (Radiation Resistant) Steels	499
VII. Reversal of Irradiation Effects to Properties	507
VIII. In-Service Monitoring of Radiation Effects	513
IX. Guides for Prediction of Property Changes by Irradiation	514
X. Standards Development Activities in Support of Radiation Service Applications	517
XI. Research Directions and Unresolved Issues	517
References	518

II. Embrittlement of Welds

H. D. Solomon

I. Introduction	525
II. Hot Cracking	532
III. Intermediate Temperature Cracking	564
IV. Cold Cracking	579
V. Concluding Remarks	592
References	593
