LIST OF CONTRIBUTORS	vii
PREFACE	ix

1 Silicon Dioxide Films in Semiconductor Devices

John M. Aitken and Eugene A. Irene

I. Introduction	1
II. Physicochemical Aspects of Thin Glass Films	11
III. Electrical Properties and Their Characterization	37
IV. Conclusion	52
References	53

2 Nuclear Waste Glasses

George G. Wicks

I. Introduction	57
II. Waste Disposal Strategy	58
III. High-Level Waste	60
IV. Processing Considerations—Vitrification	68
V. Waste-Glass Performance	73
VI. Radionuclide Immobilization in Waste-Glass Disposal Systems	107
VII. Summary	109
References	110

3 Oxynitride Glasses

Ronald E. Loehman

I. Introduction	119
II. Oxynitride Glass Synthesis	120

III.	Compositional Systems	126
IV.	Oxynitride Glass Properties	135
V.	Crystallization of Oxynitride Glasses	142
VI.	Structure of Oxynitride Glasses	146
VII.	Applications of Oxynitride Glasses	147
	References	148

4 Heavy-Metal Fluoride Glasses

Martin G. Drexhage

I.	Introduction	151
II.	Glass Formation and the Structure of Heavy-Metal Fluoride Glasses	155
III.	Preparation of Heavy-Metal Fluoride Glasses	175
IV.	Properties of Heavy-Metal Fluoride Glasses	182
V.	Summary and Conclusion	235
	References	236

5 Viscoelastic Analysis of Stresses in Composites

George W. Scherer and Simon M. Rekhson

I.	Introduction	246
II.	Principles of Relaxation	250
III.	Viscoelastic Analysis of Seals	261
IV.	Setting Temperature in Stress Analysis of Composites	289
V.	Glass-to-Glass Seals	304
VI.	Conclusions	309
	Appendix. Constants in the Viscoelastic Analyses	310
	List of Symbols	312
	References	316

INDEX	319
CONTENTS OF PREVIOUS VOLUMES	325
