PREFACE	xi

PART I. INTRODUCTION

1 Submicron Structure and Microanalysis

K. N. Tu and R. Rosenberg

I. Introduction	3
II. Submicron Structure	4
III. Microanalysis	5
IV. Chapter Synopses	7

PART II. PHOTON BEAM AND X-RAY TECHNIQUES

2 Synchrotron Radiation Photoemission Studies of Interfaces

J. H. Weaver

I. Statement of Purpose	15
II. Introduction	16
III. Synchrotron Radiation Photoemission	20
IV. Case Studies	28
V. Concluding Remarks	57
Notes	58

3 ESCA

N. Martensson

I. Introduction	65
II. Instrumentation and Experimental Considerations	72
III. Surface Sensitivity	75
IV. Quantitative Analysis	79

V.	Depth Profiling	82
VI.	Chemical Shifts and Solid State Screening	84
VII.	Surface and Interface Segregation	92
VIII.	Line Widths and Line Shapes	96
IX.	Auger Spectra	99
X.	Valence Electron Spectra	100
	Summary	106
	References	107

4 Modern Developments in Soft X-Ray Imaging

D. M. Shinozaki and R. Feder

I.	Introduction	111
II.	Soft X-Ray Sources	112
III.	Resolution	123
IV.	Potential Applications in Materials Science	138
	References	139

5 X-Ray Diffraction Analysis of Strains and Stresses in Thin Films

A. Segmüller and M. Murakami

I.	Introduction	143
II.	Strain-Stress Relations	144
III.	X-Ray Diffraction Techniques	164
IV.	Summary	193
	Appendix A. Tensor Transformations and Matrix Notation	194
	Appendix B. Relations between Stiffnesses and Compliances	196
	References	197

6 X-Ray Diffraction Analysis of Diffusion in Thin Films

M. Murakami, A. Segmüller and K. N. Tu

I.	Introduction	201
II.	Diffusion Equations	203
III.	X-Ray Diffraction Analysis	209
IV.	Summary	245
	References	247

PART III. ELECTRON BEAM TECHNIQUES

7 Cross-Sectional Transmission Electron Microscopy of Electronic and Photonic Devices

T. T. Sheng

I.	Epoxy-Embedding Technique	252
II.	TEM Cross Section Sample Preparation Technique for III-V Compound Semiconductor Device Materials by Chemical Thinning	263

III.	Pre-ion-Milling Etch and Pre-ion-Milling Drill Techniques	272
IV.	Glass Sealing Cross-Section TEM Sample Preparation	277
V.	Feature Enhancement	282
VI.	TEM Test Pattern	289
VII.	Future Trends and Summary	292
	References	295

8 High-Resolution Transmission Electron Microscopy of Surfaces and Interfaces

D. Cherns

I.	Introduction	297
II.	Lattice Imaging	298
III.	Diffraction Contrast Techniques	316
IV.	Surfaces	322
V.	Current Developments	329
	References	332

9 Scanning Transmission Electron Microscopy

P. Batson

I.	Introduction	337
II.	STEM Electron Optics	339
III.	Common Analytical Techniques	349
IV.	Energy-Filtered Imaging	361
V.	High-Resolution Energy-Loss Studies	364
VI.	Property-Dependent Techniques	376
VII.	Computer Interaction with the STEM	382
VIII.	Conclusions	383
	References	384

PART IV. ION BEAM TECHNIQUES

10 Rutherford Backscattering Spectrometry on Thin Solid Films

T. G. Finstad and W.-K. Chu

I.	Introduction	392
II.	Basic Concepts of Rutherford Backscattering Spectrometry	396
III.	Elemental Composition and Depth Profiling: Applications and Examples	401
IV.	Microbeam Applications	415
V.	Concepts of Channeling	416
VI.	Epitaxial Thin-Film Applications	420
VII.	Superlattices	432
VIII.	Surface-Structure Studies	439
	References	444

**11 The Atomic Structure and Atomic Layer Compositional
Analysis of Thin Solid Films Using the Time-of-Flight
Atom-probe Field Ion Microscopy**

T. T. Tsong

I. Introduction	450
II. Method of Absolute Composition Depth Profiling in the Atom-probe	451
III. Instrumentation	455
IV. Applications to Surface-layer Analysis	465
V. Concluding Remarks	477
References	477
INDEX	479
CONTENTS OF PREVIOUS VOLUMES	485
