## PART I. STRENGTHENING MECHANISMS

### 1 Plasticity Theories for Fibrous Composite Materials

*George J. Dvorak*

I.	Introduction	1
II.	Elastic Response	2
III.	Elastic-Plastic Response	17
IV.	Conclusion	71
	Acknowledgments	73
	Appendix	74
	References	75

### 2 Strengthening of Metal Matrix Composites Due to Dislocation Generation Through CTE Mismatch

*R. J. Arsenault*

I.	Introduction	79
II.	Reasons for and Mechanisms of Dislocation Generation	80
III.	Strengthening Mechanisms	94
	References	100

### 3 Strengthening Behavior of In Situ Composites

*T. H. Courtney*

I.	Introduction	101
II.	Processing	104
III.	Properties	106
IV.	Strengthening Mechanisms and Structure	112

V. Summary	127
Acknowledgments	128
Endnotes	129
References	129

## PART II. MECHANICAL PROPERTIES

### **4 Tensile and Compressive Properties of Metal Matrix Composites**

*R. J. Arsenault*

I. Introduction	133
II. Discontinuous Metal Matrix Composites	134
III. Continuous-Filament Metal Matrix Composites	145
References	166

### **5 Mechanical Behavior of Metal Matrix Composites under High Strain Rates and Impact Loadings**

*M. Taya*

I. Introduction	169
II. High-Strain-Rates Behavior	170
References	186

### **6 Creep Behavior of Metal Matrix Composites**

*M. Taya*

I. Introduction	189
II. Creep Behavior Composites	189
References	215

## PART III. FRACTURE AND FATIGUE

### **7 Fracture Toughness of Particulate Metal Matrix Composites**

*D. L. Davidson*

I. Introduction	217
II. Description of Materials	218
III. Mechanisms of Fast Fracture	221
IV. Origins of Fracture Toughness	222
V. Effects of Particle Reinforcement on Fracture	230
VI. Predicting Fracture Toughness	233
References	233

**8 Fatigue of Continuously Reinforced Metal Matrix Composites***K. K. Chawla*

I. Introduction	235
II. Types of Continuous Reinforcement in Metal Matrix Composites	236
III. Fatigue Behavior of Continuously Reinforced Metal Matrix Composites	238
IV. Hybrid Composites	248
V. Thermal Fatigue	249
VI. Summary	252
References	252
Suggested Readings	253

**9 Fatigue of Discontinuously Reinforced Metal Matrix Composites***Jian Ku Shang and R. O. Ritchie*

I. Introduction	255
II. Cyclic Deformation	256
III. Low-Cycle and High-Cycle Fatigue	258
IV. Fatigue-Crack Propagation	260
V. Near-Threshold Fatigue Behavior	264
VI. Higher Growth-Rate Behavior	274
VII. Summary	282
Acknowledgments	283
References	284

**PART IV. PHYSICAL AND CHEMICAL PROPERTIES****10 Dynamic Mechanical Properties***A. Wolfenden and J. M. Wolla*

I. Introduction	287
II. Measurement Techniques	288
III. Damping Capacity	298
IV. Dynamic Modulus	319
V. Summary	324
Appendix	325
References	326

**11 Thermal Expansion of Metal Matrix Composites***Thomas A. Hahn*

I. Introduction	329
II. Elastic Interaction	330

III.	Plastic-Deformation Analysis	345
IV.	Summary	352
	Appendix I	352
	Appendix II	353
	References	354
<b>12 Electrical Conductivity in Continuous-Fiber Composites</b>		
<i>Jacques E. Schoutens</i>		
I.	Introduction	357
II.	Longitudinal Conductivity	358
III.	Traverse Conductivity	367
IV.	Summary	380
	References	381
<b>13 Corrosion</b>		
<i>Patricia P. Trzaskoma</i>		
I.	Introduction	383
II.	Corrosion Processes	384
III.	Corrosion Studies of Selected Metal Matrix Composites	388
IV.	Effects of Corrosion on the Properties of Metal Matrix Composites	396
V.	Corrosion Fatigue	398
VI.	Corrosion Control	399
VII.	Coatings	399
VIII.	Future Directions	402
	Acknowledgments	403
	References	403
