<i>Symbols, SI Units</i>	xv
Chapter 1 Cryogenic Principles and Applications	1
1.1. Temperature Scale	2
1.2. Historical Background	3
1.3. Applications for Cryogenics	7
1.4. Thermodynamic Laws	9
1.4.1. First and Second Laws of Thermodynamics	9
1.4.2. Third Law of Thermodynamics	13
Chapter 2 Low-Temperature Materials Properties	17
2.1. Heat Capacity	17
2.1.1. Heat Capacity of Solids	18
2.1.2. Heat Capacity of Gases	23
2.1.3. Heat Capacity of Liquids	24
2.2. Conductivities—Electrical and Thermal	24
2.2.1. Electrical Resistivity of Metals	25
2.2.2. Thermal Conductivity of Metals	27
2.2.3. Lattice Thermal Conductivity	28
2.3. Thermal Contraction	31
2.4. Mechanical Properties	34
2.5. Spin Systems	36
2.6. Superconductivity	42
<i>Problems</i>	49
<i>References</i>	50
Chapter 3 Helium as a Classical Fluid	53
3.1. Helium Phase Diagram	53
3.2. Gaseous Helium	55
3.2.1. Intermolecular Interactions	56
3.2.2. Virial Expansion	58
3.2.3. Empirical Equations of State	61
3.3. Liquid He I	62
3.3.1. Density	62
3.3.2. Thermal Properties	64
3.3.3. Surface Tension	67

3.4.	Transport Properties of Gaseous and Liquid He I	68
3.4.1.	Maxwell–Boltzmann Distribution	68
3.4.2.	Transport Properties	71
	<i>Problems</i>	75
	<i>References</i>	76
Chapter 4	Helium as a Quantum Fluid	77
4.1.	Ideal Quantum Gases	79
4.1.1.	Density	83
4.1.2.	Internal Energy	85
4.1.3.	Specific Heat	86
4.1.4.	Vapor Pressure	87
4.1.5.	Latent Heat	88
4.2.	Liquid He II Properties	89
4.2.1.	State Properties	91
4.2.2.	Transport Properties	94
4.2.3.	Fountain Effect	96
4.3.	Excitations in He II	98
4.4.	Two-Fluid Model	101
4.4.1.	Equations of Motion	103
4.4.2.	Thermomechanical Effect	106
4.4.3.	Sound Propagation	108
4.4.4.	Viscous Flow	111
4.4.5.	Heat Transport	114
4.5.	Vortices and Turbulence in He II	117
4.5.1.	Rotating Helium	117
4.5.2.	Critical Velocities	121
4.5.3.	Mutual Friction	126
4.5.4.	Steady-State Heat Transport	130
4.5.5.	Forced Convection Heat Transport	133
4.5.6.	Attenuation of Second Sound	134
4.5.7.	Development of Turbulence	135
	<i>Problems</i>	137
	<i>References</i>	138
Chapter 5	He II Heat Transfer	141
5.1.	Steady-State Heat Transport	142
5.1.1.	Peak Heat Flux in Wide Channels	143
5.1.2.	Peak Heat Flux in Cylindrical Geometries	146
5.1.3.	Peak Heat Flux in Saturated He II	147
5.1.4.	Forced Convection Heat Transfer	151
5.2.	Transient Heat Transport	156
5.3.	Kapitza Conductance	166
5.3.1.	Phonon Radiation Limit	168
5.3.2.	Acoustic Mismatch Theory	173
5.3.3.	Small Heat Flux Kapitza Conductance ($\Delta T \ll T$)	177
5.3.4.	Large Heat Flux Kapitza Conductance ($\Delta T \approx T$)	180

5.4. Film Boiling and Recovery—He II	182
5.4.1. Film Boiling Heat Transfer Coefficient	184
5.4.2. Theoretical Models for Film Boiling Heat Transfer	187
5.4.3. Transient Film Boiling Heat Transfer	193
<i>Problems</i>	195
<i>References</i>	196
 Chapter 6 Pool Boiling He I Heat Transfer	199
6.1. Regimes of Heat Transfer	201
6.2. Convective Heat Transfer	204
6.3. Nucleate Boiling Heat Transfer	206
6.3.1. Nucleation Theory	207
6.3.2. Heat Transfer Correlations	211
6.3.3. Maximum Nucleate Boiling Heat Flux	214
6.4. Film Boiling	219
6.4.1. Minimum Film Boiling Heat Flux	219
6.4.2. Heat Transfer Correlations	222
6.5. Channel Heat Transfer	223
6.6. Transient Heat Transfer	228
6.6.1. Surface Temperature Difference	231
6.6.2. Transition to Film Boiling	233
6.7. Surface Effects	235
<i>Problems</i>	236
<i>References</i>	237
 Chapter 7 Forced Convection Normal Helium	239
7.1. General Considerations of Internal Flow	240
7.2. Supercritical Helium	246
7.2.1. Fluid Mechanics	246
7.2.2. Heat Transfer Correlations	250
7.3. Two-Phase Flow and Heat Transfer	253
7.3.1. Flow Regimes and Transitions	253
7.3.2. Pressure Drop	256
7.3.3. Heat Transfer Correlations	260
7.4. Transient Effects	263
<i>Problems</i>	269
<i>References</i>	270
 Chapter 8 Liquefaction and Refrigeration Systems	273
8.1. Ideal Liquefaction	274
8.2. First Law of Steady Flows	278
8.3. Isenthalpic Expansion	280
8.3.1. Joule–Thomson Effect	280
8.3.2. Real Gases	283
8.4. Joule–Thomson Liquefier	288

8.5. Isentropic Expansion	294
8.6. Claude Liquefier	295
8.7. Other Helium Liquefaction Systems	301
8.7.1. Cascade System	301
8.7.2. Collins Helium Liquefaction System	303
8.7.3. Stirling Cycle	304
8.8. Closed-Cycle Refrigeration	306
8.8.1. Isothermal Refrigeration	309
8.8.2. Isobaric Refrigeration	310
8.9. Nonideal Refrigeration Components	313
8.10. He II Refrigerators	315
8.11. Refrigeration Technology	317
Problems	321
References	323
 Chapter 9 Special Topics in Cryogenics	 325
9.1. Thermal Insulation	325
9.1.1. Solid Conduction	325
9.1.2. Gas Conduction	326
9.1.3. Radiation Heat Transfer	328
9.1.4. Insulating Materials	333
9.2. The Helium-3 Isotope	335
9.2.1. ³ He- ⁴ He Mixtures	337
9.2.2. Properties of Pure ³ He	340
9.2.3. Submillikelvin Refrigeration	344
9.2.4. Superfluid ³ He	347
9.3. Helium Adsorption	350
9.3.1. Adsorption Thermodynamics	351
9.3.2. Physical Properties of Helium Films	359
9.4. Magnetic Refrigeration	362
9.4.1. Principles of Magnetic Cooling	364
9.4.2. Continuous Magnetic Refrigerators	371
References	374
 Appendix 1. Thermodynamic Properties of Liquid Helium at Saturated Vapor Pressure	 379
Appendix 2. Properties of Helium at Constant Pressure	381
Appendix 3. Compressibility Factor for Cryogenic Fluids	397
Appendix 4. Temperature–Entropy Diagrams for Cryogenic Fluids	405
Further Reading	417
Conversion Factors	420
Physical Constants	421
Index	423
