Contents

Preface VII

1. Introduction to composite materials 1
   - 1.1 General History 1
   - 1.2 Composite Definition and Classification 2
   - 1.3 Filamentary Type Composition 3
   - 1.4 Composite Manufacture, Fabrication and Processing 6
   - 1.5 Composite Material Behavior 19
   - 1.6 Applications 21
   - 1.7 Bibliography 26

2. Anisotropic Elasticity and laminate theory 29
   - 2.1 Introduction 29
   - 2.2 Derivation of the Anisotropic Elastic Stiffness and compliance Matrices 30
   - 2.3 The Physical Meaning of the Components of the Orthotropic Elasticity Tensor 36
   - 2.4 Thermal and Hygrothermal Considerations 40
   - 2.5 Laminae of Composite Materials 43
   - 2.6 Laminate Analysis 49
   - 2.7 Problems 56
   - 2.8 References 61

3. Plates and panels of composite materials 63
   - 3.1 Introduction 63
   - 3.2 Plate Equilibrium Equations 63
   - 3.3 The Bending of Composite Material Plates 67
   - 3.4 Plate Boundary Conditions 70
   - 3.5 Navier Solutions for Plates of Composite Materials 71
   - 3.6 Navier Solution for a Uniformly Loaded Simply Supported Plate 71
   - 3.7 Levy Solution for Plates of Composite Materials 75
   - 3.8 Perturbation Solutions for the Bending of a Composite Material Plate, with Mid-Plane Symmetry and no Bending-Twisting Coupling 79
   - 3.9 Perturbation Solutions for the Bending of a Composite Material Plate with Bending-Twisting Coupling and Mid-Plane Symmetry 82
   - 3.10 Eigenvalue Problems of Plates of Composite Materials: Natural Vibrations and Elastic Stability 85
   - 3.11 Static and Dynamic Analysis of Plates of Composite Materials Including Transverse Shear Deformation Effects 90
   - 3.12 Some Remarks on Composite Structures 101
   - 3.13 Methods of Analysis for Honeycomb Core Sandwich Panels with Composite Material Faces; and Their Structural Optimization 104

3.14 Concluding Remarks 113
3.15 Problems and Exercises 115
3.16 Bibliography 116

4. Beams, columns and rods of composite materials 119
4.1 Development of a Simple Theory 119
4.2 Some Simplified Composite Beams Solutions 123
4.3 Bending of Laminated Beams - Advanced Theory 127
4.4 Axial Loading for Simply Supported Beams 136
4.5 Eigenvalue Problems of Beams of Composite Materials: Natural Vibrations and Elastic Stability 139
4.6 Thermoelastic Effects on Beams of Composite Materials 145
4.7 Problems 146

5. Composite material shells 149
5.1 Introduction 149
5.2 History of Composite Material Shells 149
5.3 Analyses of Composite Materials Cylindrical Shells Under Axially Symmetric Loads 151
5.4 A General Solution for Composite Cylindrical Shells Under Axially Symmetric Loads 159
5.5 Response of a Long Axi-Symmetric Laminated Composite Shell to an Edge Displacement 160
5.6 Buckling of Circular Cylindrical Shells of Composite Materials Subjected to Various Loads 161
5.7 Vibration of Composite Shells 169
5.8 Problems and Exercises 170
5.9 References 171

6. Energy methods in composite material structures 173
6.1 Introduction 173
6.2 Theorem of Minimum Potential Energy 174
6.3 Beam Analysis 175
6.4 A Rectangular Composite Material Plate Subjected to Lateral and Hygrothermal Loads 177
6.5 Elastic Stability of Generally Laminated Composite Panels Including Hygrothermal Effects 189
6.6 Theorem of Minimum Potential Energy for a Laminated Composite Cylindrical Shell 198
6.7 Viscoelastic Effects 207
6.8 Problems 207
6.9 References 208

7. Strength and failure theories 209
7.1 Introduction 209
7.2 Failure of Monolithic Isotropic Materials 213
7.3 Anisotropic Strength and Failure Theories 216
7.4 Lamina Strength Theories 221
7.5 Laminate Strength Analysis 233
7.6 Problems 237
7.7 References 238

8. Joining of composite material structures 239
8.1 General Remarks 239

8.2 Adhesive Bonding 239
8.3 Mechanical Fastening 262
8.4 Problems 278
8.5 References 279

Appendices 285
A-1 Micromechanics 285
A-2 Mechanical Property Characterization 301
A-3 Answers to Certain problems 305
