

CONTENTS

Steady-State Plasma Flow in a Magnetic Field

A. I. Morozov and L. S. Solov'ev

Introduction.....	1
Chapter 1. Acceleration Mechanisms	2
§1. Microscopic Picture of Plasma Acceleration	2
§2. Conditions for the Existence of an Electric Field in a Plasma.....	5
§3. Basic Equations; the Replacement Factor ξ	8
§4. Perturbations of the Plasma Stream	11
Chapter 2. Axisymmetric Flow of an Ideal Plasma in a Magnetic Field with $\xi = 0$	18
§1. Conservation Laws and Equations for the Stream Functions	18
§2. Axisymmetric Flow across an Azimuthal Magnetic Field.....	23
§3. Plasma Flow in a Narrow Flux Tube ($H_{\parallel} = 0$).....	26
§4. Integrable Flows Which Vary Slowly along the z Axis.....	35
§5. Flow Velocity Equal to Signal Velocity at Some Point	43
§6. Current Eddies and Critical Surfaces.....	45

Chapter 3. Flow in Axisymmetric Channel with a Longitudinal Magnetic Field	54
§1. Integrated Characteristics	54
§2. Flow in Narrow Axisymmetric Channel . . .	56
§3. Flow of Cold Plasma in Channel of Slowly Varying Cross Section.	68
Chapter 4. Axisymmetric Hall Flow of an Ideal Plasma.	70
§1. Conservation Laws and Integral Parameters.	70
§2. Qualitative Analysis of Equations (4.18) and (4.19)	74
§3. Flow of a Two-Component Plasma in Narrow Tube with $H_{\parallel} = 0$	81
§4. Flow in Smooth Channel with $H_{\parallel} = 0$	84
Appendix 1. Two-Parameter Steady-State Hydro- magnetic Flow of Ideally Conducting Medium in Arbitrary Curvilinear Coordinate System	85
Appendix 2. Steady-State Symmetric Flow in Two-Fluid Magnetohydrodynamics	94
§1. Flow of the Electron and Ion Fluids	94
§2. Symmetric Flows of Two-Fluid Magneto- hydrodynamics with Slow Variation along One of the Coordinates	100
References	102
Calculation of Two-Dimensional Plasma Flows in Channels K. V. Brushlinskii and A. I. Morozov	
Introduction.	105
Chapter 1. Formulation of the Problem and Method of Analysis	108
§1.1. Physical Formulation of the Problem.	108
§1.2. Mathematical Models	122
§1.3. Method for Numerical Solution of the Problem.	137

Chapter 2. Flow of Fully Ionized Plasma	145
§2.1. Establishment of Steady-State; Stability of the Flow	145
§2.2. Quasi-One-Dimensional Flow	148
§2.3. Two-Dimensional Flow of Ideal Plasma . . .	152
§2.4. Influence of a Finite Conductivity on the Flow.	157
§2.5. Hall Effect	161
§2.6. Compressional Plasma Flows	172
Chapter 3. Flow of a Gas Which Is Ionized in the Channel	182
§3.1. Ionization Process in the Flow Model	182
§3.2. Steady-State Flow with a Conductivity Discontinuity in a Channel of Constant Cross Section	184
§3.3. Calculations for the Flow of an Ionizing Gas	188
References	194
Two-Dimensional Magnetohydrodynamic Model for the Dense Plasma Focus of a Z Pinch V. F. D'yachenko and V. S. Imshennik	
Introduction.	199
Chapter 1. MHD Analysis of a Noncylindrical Z Pinch	202
§1. Description of Dissipative Processes.	202
§2. Two-Dimensional Magnetohydrodynamic Equations (MHD Model)	209
§3. Energy Conservation Law and Kirchhoff Equation	215
§4. Initial Conditions and Boundary Conditions for the MHD Problem	223
§5. Dimensionless Form of the Equations; Complete Formulation of the MHD Problem.	228

Chapter 2. Numerical Solution of the Two-Dimensional MHD Problem	233
§6. General Comments	233
§7. The Free-Point Method	236
§8. The Selection of Points	239
§9. Method for Finding the Difference Equations	244
§10. Calculation Equations	248
§11. Difference Formulation of the Boundary Conditions	258
§12. Formulation of the Calculation Problem	261
Chapter 3. MHD Analysis of the Z Pinch	263
§13. A Few Comments	263
§14. Collapse of the Shock Wave and the Current Sheet to the Axis of the System	265
§15. First Plasma Compression	268
§16. Second Plasma Compression	273
§17. Instability of the Plasma Interface with the Magnetic Field	280
§18. Energy Balance and Neutron Yield of the Plasma Focus	287
Conclusion	295
References	297

Plasma Optics

A. I. Morozov and S. V. Lebedev

Chapter 1. Introduction	301
§1. Basic Concepts of Plasma Optics	301
§2. Electric Field in the Plasma for $T_e = 0$	308
§3. Analysis of Plasma-Optical Systems	322
Chapter 2. Analysis of a Paraxial Beam in the Single-Particle Approximation	325
§1. Specification of the Magnetic Fields	325
§2. Paraxial Approximation	330
§3. Incorporation of Aberrations in the Grinberg Scheme	342

§4. Harmonic Systems with Equipotential Principal Trajectory	345
§5. The "Weak-Field Approximation" for Lenses	353
§6. Variational Formulation of Particle-Optical Problems	362
Chapter 3. Plasma Lenses	367
§1. Axial Plasma Lens	367
§2. Annular Magnetic Lens	373
§3. Electrostatic Plasma Lens	377
§4. First-Order Aberrations of an Annular Plasma Lens	382
§5. Multiple-Lens, Multiply Connected Charged-Particle Accelerators	386
§6. Toroidal Multiply Connected, Multiple-Lens Accelerator	394
Chapter 4. Plasma-Optical Systems with Two-Parameter Focusing	400
§1. Systems with Stabilized Focus	400
§2. Focusing in Terms of the Radial and Azimuthal Velocities (Whirler System)	404
§3. Energy Recovery	410
Chapter 5. Equilibrium Neutralized Ion Beams	414
§1. Thermalized Potential	414
§2. Distributions of the Thermalized Potential and the Electron Temperature in a Steady-State Plasma System	418
§3. Ion Dynamics	427
§4. Electron Sheath of a Neutralized Ion Beam Detached from the Walls	439
§5. Grazing a Neutralized Ion Beam in an Axial Lens	448
§6. Magnetic Fields Produced by the Currents Flowing in a Multiply Connected, Multiple-Lens Accelerator	456
