

## CONTENTS

### NONLINEAR DYNAMICS OF RAREFIED PLASMAS AND IONOSPHERIC AERODYNAMICS

A. V. Gurevich and L. P. Pitaevskii

1. Introduction.....	1
2. Quasineutral Plasma Flows.....	6
2.1. Self-Similar Motion.....	6
2.2. One-Dimensional Flows. Appearance of Singularities.....	27
2.3. Adiabatic Trapping of Electrons.....	37
2.4. Ion Acceleration.....	45
3. Appearance and Evolution of the Oscillatory Plasma State.....	59
3.1. Small Perturbation of the Quasineutral Flow..	59
3.2. Hydrodynamic Breaking Shock Wave in Nondissipative Hydrodynamics.....	63
3.3. Kinetic Breaking.....	83
3.4. Large Discontinuity at the Front of a Rarefaction Wave.....	87
4. Ionospheric Aerodynamics.....	98
4.1. Simplification of Equations and the Law of Similarity.....	98
4.2. The Flow around a Half-Plane.....	103
4.3. The Flow around a Rounded Edge of a Body.	105
4.4. Flow around a Disk.....	107
4.5. The Flow around a Body of an Arbitrary Shape.....	112
5. Plasma in Magnetic Field.....	114
5.1. The Main Equations.....	114
5.2. Self-Similar Flow.....	118
5.3. Plasma Flow into Vacuum. Small Discontinuity.....	121
5.4. Nonisothermal Plasma .....	125
6. Inductive Interaction.....	130

6.1. The Surface Current and Polarization of the Surface of a Conducting Body. The Double Layer. ....	132
6.2. Plasma Flow around a Conducting Plate. General Relations. ....	136
6.3. High-Velocity Body in Plasma. ....	138
6.4. Plasma Flow around a Low-Velocity Body. ....	145
6.5. The Forces Acting on a Body and Dissipation of Energy. ....	148
References. ....	149

### CYCLOTRON INSTABILITY OF THE EARTH RADIATION BELTS

P. A. Besspalov and V. Yu. Trakhtengerts

Introduction. ....	155
1. Physical Conditions in the Geomagnetic Trap. ....	158
2. Linear Theory of the Cyclotron Instability. ....	162
3. Quasilinear Description of the Cyclotron Instability. ....	174
4. Particle Diffusion over Pitch Angles. ....	181
5. Stationary States of the Earth RB. ....	191
6. RB Formation with Transfer of Particles from the Periphery of the Magnetosphere. ....	201
7. Temporal CI Evolution. ....	213
8. Pulsations of Magnetic Field Tubes with Generation of CI Relaxation Oscillations. ....	225
9. Self-Excitation of Periodic CI Regimes. ....	237
10. Dynamics of the Wave Spectrum in the Alfvén Maser. ....	246
11. Alfvén Sweep Maser. ....	253
12. Generation of the Main Types of the Low-Frequency Electromagnetic Radiation in the Magnetosphere. ....	259
13. Conclusions. ....	270
Appendix A. Averaging over the Bounce-Oscillation Period. ....	272
Appendix B. Relaxation Oscillations for an Arbitrary Source. ....	274
Appendix C. Oscillatory CI Regimes for a Finite Frequency Band. ....	279
Appendix D. The Effects of the Azimuthal Particle Drift on the Periodic CI Regimes. ....	282
References. ....	284

### DYNAMIC NONLINEAR ELECTROMAGNETIC PHENOMENA IN PLASMAS

A. G. Litvak

1. Mechanisms of Nonlinear Processes. Fundamental Equations. ....	294
1.1. Ponderomotive Forces in Plasmas in Rapidly Varying Fields. ....	295
1.2. Quasihydrodynamics of Plasmas in High-Frequency Fields. ....	298
1.3. Equations for the Electromagnetic Field. ....	302
2. Self-Interaction of Electromagnetic Plane Waves. ....	304
2.1. Reflection and Penetration of an Electromagnetic Plane Wave. ....	304
2.2. Resonance Absorption of Large-Amplitude Electromagnetic Waves in a Nonuniform Plasma. ....	310
2.3. Self-Sustained Waveguide Ducts. ....	321
2.4. Envelope Solitons. ....	329
3. Quasioptical Effects of Self-Interaction of Electromagnetic Waves. ....	339
3.1. Stationary Self-Focusing of Wave Beams in Isotropic Plasma. ....	341
3.2. Self-Interaction of Wave Beams in a Plasma in a Constant Magnetic Field. ....	349
3.3. Space-Time Instability of a Plane Wave. ....	356
4. Dynamic Regimes of Parametric Instabilities of Plasma Oscillations. ....	361
4.1. Basic Equations. Hydrodynamic Instabilities of Plasma Oscillations in High-Frequency Fields. ....	362
4.2. Multiwave Decay Processes. ....	369
4.3. Induced Scattering by Ions. ....	373
4.4. Modified Decay Instability. ....	376
4.5. Dynamics of the Modulational Instability. ....	381
4.6. Collapse of Non-One-Dimensional Cavitons. ....	393
4.7. Brightening of a Plasma under Modulational Instability. ....	407
References. ....	412

### DYNAMICS OF THE Z PINCH

V. V. Vikhrev and S. I. Braginskii

Introduction. ....	425
--------------------	-----

1. Formation of a Current Sheath in a High-Power Pulsed Discharge.....	434
1.1. Skin Effect in an Ionizable Gas.....	435
1.2. Physical Processes Involved in the Formation of the Current Sheath.....	440
1.3. Formation of the Current Sheath.....	445
1.4. Stability of the Current Sheath during Its Formation.....	449
1.5. Formation of a Filamentous Structure of the Current Sheath.....	452
2. Evolution of the Plasma Sheath in the Z Pinch. ...	458
2.1. Physical Processes in the Motion of the Sheath... ..	458
2.2. Three-Fluid MHD Model of the Plasma Sheath of the Z Pinch. ....	463
2.3. Numerical Simulation of the Sheath Motion....	467
2.4. Self-Similar Solution for the Current Sheath Structure.....	472
3. Motion of the Plasma Sheath.....	474
3.1. One-Dimensional Snowplough Model.....	476
3.2. Two-Dimensional Model of Sheath Motion in a Noncylindrical Z Pinch.....	480
3.3. Matching of the Sheath Motion to the Discharge Circuit.....	482
3.4. Influence of the Hall Effect on the Sheath Motion.....	484
4. The Plasma Focus.....	489
4.1. MHD Model of the Plasma Focus Taking into Account the Anomalous Resistance of the Plasma.....	490
4.2. MHD Instability of the Plasma Focus. ....	498
4.3. Simple Model of the Plasma Focus. ....	504
Conclusion.....	511
References. ....	512
