

CONTENTS

THE PRESENT STATE OF THE THEORY OF SPECTRA OF MULTIPLY CHARGED IONS

U. I. Safronova and V. S. Senashenko

1. Introduction	1
2. Theoretical Methods for Describing the Spectra of Multiply Charged Ions	4
3. Some Calculations of the Atomic Characteristics of Multiply Charged Ions	16
Conclusion	31
References	31

EXCITATION AND IONIZATION OF MULTIPLY CHARGED IONS BY ELECTRONS

V. A. Bazylev and M. I. Chibisov

Introduction	35
1. The Coulomb-Born Method with Exchange Resonances. Relativity	36
2. Excitation of Dipole Transitions with $\Delta n = 0$	50
3. Ionization of Multiply Charged Ions. The Contribution of Inner Shells	61
References	71

ELECTRON BREMSSTRAHLUNG IN HOT PLASMAS

V. I. Gervids, V. P. Zhdanov, V. I. Kogan,
B. A. Trubnikov, and M. I. Chibisov

Introduction	73
------------------------	----

1. The Static Approximation	74
2. Dependence of Bremsstrahlung Intensity on Energy, Temperature, and Radiation Frequency	79
3. The Born Approximation and Approximating the Bremsstrahlung Intensity Based on the Low-Frequency Limit $\omega \rightarrow 0$	83
4. Quasiclassical Approximation	89
5. Comparisons of the Different Approximations	99
References	100

DIELECTRONIC RECOMBINATION

V. P. Zhdanov

1. The Mechanism of Dielectronic Recombination and General Formulas	103
2. Numerical Calculations	107
3. The Effect of the Electron Density on Dielectronic Recombination	114
4. Experimental Studies	118
Conclusion	120
References	121

CHARGE EXCHANGE OF ATOMS
ON MULTIPLY CHARGED IONSV. A. Abramov, F. F. Baryshnikov, A. I. Kazanskii,
I. V. Komarov, V. S. Lisitsa, and M. I. Chibisov

Introduction	123
1. Asymptotic Behavior of the Exchange Interaction and a Decay Model for Calculating Cross Sections	124
2. Charge Exchange of Hydrogen Atoms on Fully Ionized Ions. Calculations Using the Landau-Zener Model	131

3. Charge Exchange of Hydrogen Atoms on Fully Ionized Ions (Bare Nuclei). The Close Coupling Method	138
Conclusion	145
References	147

RADIATIVE TRANSFER IN PLASMAS

V. A. Abramov, V. I. Kogan, and V. S. Lisitsa

1. Introduction	151
2. The Biberman-Holstein Equation	155
3. Some Solutions of the Biberman-Holstein Equation. Diffusive and Antidiffusive Excitation Transfer	161
4. Probabilistic Treatment of Excitation Transfer. The Characteristics of Transfer in a Half Space	166
5. Migration Time for a Resonance Photon over a Given Distance. Elementary Treatment of Nondiffusive Radiative Transfer	175
6. Resonance Line Emission from a Finite Volume of Nonequilibrium Plasma	182
7. Characteristic Lengths in the Radiative Transfer Problem	186
8. Radiative Losses by Plasma Systems in Thermal Equilibrium	191
9. Conclusion	200
References	203

THE KINETICS OF RADIATION
BY MULTIPLY CHARGED IONS
IN THERMONUCLEAR PLASMASV. I. Gervids, A. G. Zhidkov, V. S. Marchenko,
and S. I. Yakovlenko

Introduction	207
------------------------	-----

1. The Ionization State of Impurities and the Kinetics of Level Populations	208
2. Spectroscopic Diagnostics of Impurity Ions . . .	226
3. Impurity Radiation and the Energy Balance . .	249
Appendix	264
References	268

THE INTERACTION OF ATOMIC PARTICLES
WITH SOLIDS

Yu. V. Martynenko, A. I. Ryazanov, O. B. Firsov,
and Yu. N. Yavlinskii

1. Introduction	273
2. Energy Loss by Fast Particles in Solids	279
3. Depth Profiles of Implanted Ions and Defects. .	287
4. Reflection of Ions from Surfaces	303
5. Sputtering.	314
6. The Charge State of Reflected and Sputtered Particles	337
References	351
