

**CONTENTS**

**DYNAMICS OF SUPERSONIC LANGMUIR  
TURBULENCE**

**B. N. Breizman and K. Jungwirth**

1. Introduction . . . . .	1
2. Basic Equations . . . . .	2
3. Variational Approach to the Integrals of Motion . . . . .	7
4. Adiabatic Approximation and the Geometric-optics Approximation for Supersonic Plasmons . . . . .	11
5. Composite Solitons . . . . .	15
6. Self-similar Collapse of Langmuir Waves . . . . .	19
7. Conservation Laws of Soliton Production and Interaction . . . . .	22
8. Soliton Formation Out of a Cluster of Langmuir Waves . . . . .	30
9. Modulation Instability (Linear Theory) . . . . .	41
10. Nonlinear Dynamics of Modulational Instability in the One- dimensional Model . . . . .	50
11. Fluctuational Formation of Solitons . . . . .	60
12. Generation of Ion Sound by Self-localized Plasmons . . . . .	64
Appendix 1 . . . . .	68
Appendix 2 . . . . .	71
References . . . . .	74

**WALL PLASMA IN TOKAMAKS**

**A. V. Nedospasov and M. Z. Tokar'**

Introduction . . . . .	77
------------------------	----

1. Theoretical Models Describing the Wall Region . . . . .	80
1.1. Hydrodynamic Approximation for the Plasma . . . . .	80
1.2. Kinetic Description of Plasma . . . . .	84
1.3. Description of Neutral Component . . . . .	89
2. Recycling of Plasma on a Wall Parallel to the Magnetic Field . . .	95
2.1. Analytic Methods of Solving the Kinetic Equations for the Neutrals . . . . .	95
2.2. Stationary State of a Plasma in the Wall Region . . . . .	100
2.3. Instability of State with Plasma Recycling on the Wall . . . . .	106
2.4. Turbulent Plasma Blanket . . . . .	110
2.5. Comparison with Experiment . . . . .	112
3. Role of Recycling in a Configuration with a Divertor . . . . .	115
3.1. Characteristics of SOL Region . . . . .	115
3.2. One-Dimensional Approximation for Plasma in Divertor Volume . . . . .	116
3.3. Plasma in the Main Part of the Divertor Layer . . . . .	130
3.4. Separation of Deuterium and Tritium in the Divertor Layer of a Tokamak Reactor . . . . .	138
3.5. Transition with Plasma "Condensation" in the Recycling Region . . . . .	142
3.6. Gas-Target Regime . . . . .	146
3.7. Comparison with Experiment . . . . .	156
4. Wall Region in a Tokamak with a Limiter . . . . .	161
4.1. Plasma in a Limiter Layer Penetrable to Neutral Particles . . . . .	161
4.2. Influence of Limiter Recycling on the SOL Plasma . . . . .	163
4.3. Pumpout Limiters . . . . .	168
4.4. Comparison with Experiment . . . . .	173
5. Impurities in Tokamak Wall Plasma . . . . .	176
5.1. Entry of Impurities into Plasma . . . . .	176
5.2. Transport of Impurities into the Peripheral Region . . . . .	178
5.3. Dynamics of Impurities in SOL . . . . .	182
5.4. Screening Properties of SOL . . . . .	188
5.5. Extraction of Helium from Tokamak Reactor . . . . .	195

5.6. Role of Impurities in the Heat Balance of a Peripheral Plasma . . . . .	198
5.7. Comparison with Experiment . . . . .	208
6. Particle and Heat Transport in a Wall Plasma . . . . .	211
6.1. General Information . . . . .	211
6.2. Equations for Plasma Potential (Poloidal Limiter) . . . . .	212
6.3. Drift-Type Waves in SOL and Their Stability . . . . .	214
6.4. Convection of a Turbulent Plasma in the Shadow of a Poloidal Limiter . . . . .	216
6.5. Structure of Turbulence . . . . .	222
6.6. Comparison with Experiment . . . . .	225
6.7. Plasma Transport in Stationary Perturbations of the Magnetic Field . . . . .	228
References . . . . .	233

## ALPHA PARTICLES IN TOKAMAKS

S. V. Putvinskii

Introduction . . . . .	239
1. Kinetics of Charged Thermonuclear Products in a Homogeneous Plasma . . . . .	242
1.1. Nuclear Reactions in a Thermonuclear Plasma . . . . .	242
1.2. Energy Spectra of Thermonuclear-Particle Spectra . . . . .	247
1.3. Interaction of Energetic Thermonuclear Particles with a Plasma . . . . .	250
1.4. Secondary Reactions . . . . .	253
1.5. Distribution Function of $\alpha$ Particles in a Nonstationary Plasma . . . . .	258
2. Containment of $\alpha$ Particles in an Axisymmetric Tokamak . . . .	261
2.1. $[R, Z, \psi]$ Representation for Drift Surfaces . . . . .	261
2.2. Loss of Particles Created on a Magnetic Axis . . . . .	266
2.3. Drift Kinetic Equation for $\alpha$ Particles . . . . .	269
2.4. Direct Drift Losses of $\alpha$ Particles . . . . .	270

2.5.	Distribution of $\alpha$ -Particle Flux over the Angles of Incidence on the Wall . . . . .	275
2.6.	Inverse Problem for Direct Drift Losses of Thermonuclear Particles . . . . .	278
2.7.	Inverse Problem for Particles with Large Larmor Radius . . . . .	287
2.8.	$\alpha$ -Particle Losses from the Containment Region by Scattering . . . . .	289
2.9.	$\alpha$ -Particle Diffusion-Flux Distribution over the Wall . . . . .	292
2.10.	Distribution Function of Contained $\alpha$ Particles with Allowance for the Finite Orbit Width . . . . .	300
2.11.	Bootstrap Current Produced by $\alpha$ Particles . . . . .	307
2.12.	Pseudodiffusion of $\alpha$ Particles . . . . .	313
3.	Influence of Magnetic-field Perturbations on $\alpha$ -Particle Contain- ment in a Tokamak . . . . .	317
3.1.	Characteristic Frequencies of Unperturbed $\alpha$ - Particle Motion . . . . .	317
3.2.	Helical Perturbations of Magnetic Field . . . . .	320
3.3.	Ripple of Toroidal Field . . . . .	332
3.4.	Collisionless Banana Diffusion in a Rippled Magnetic Field . . . . .	334
3.5.	Cyclotron Interaction of $\alpha$ -Particle Interaction with the Ripple . . . . .	341
Conclusion	. . . . .	353
References	. . . . .	354
