<b>Basic Equations and Conservation Laws</b> . . . . .	1
1.1. Introduction . . . . .	1
1.2. Some Peculiarities of Maxwell's Equations . . . . .	3
1.3. Conservation of Momentum . . . . .	4
1.4. Some Examples of the Stress Tensor . . . . .	7
1.5. General Expression for the Divergence of a Tensor in Cylindrical Coordinates . . . . .	10
1.6. The Conservation of Energy . . . . .	11
1.7. The Conservation of Mass . . . . .	14
1.8. The Liouville Equation . . . . .	15
1.9. The Liouville Equation with Electromagnetic Forces . . . . .	17
1.10. The Approximation of Magnetohydrodynamics . . . . .	21
<b>II. First-Order Orbit Theory</b> . . . . .	25
2.1. Introduction . . . . .	25
2.2. Larmor Orbits and Guiding Centers . . . . .	25
2.3. The Magnetic Moment and the Magnetization Current . . . . .	26
2.4. Effect of a Constant Electric Field . . . . .	29
2.5. Varying Electric Fields and the Plasma Dielectric Con- stant . . . . .	30
2.6. Effect of Gravitational Force . . . . .	33
2.7. Effect of Time Derivative of $\mathbf{B}$ . . . . .	34
2.8. The Electric Drift and the Motion of $\mathbf{B}$ Lines . . . . .	34
2.9. Effects of Spatial Derivatives of $\mathbf{B}$ . . . . .	40
2.10. Order of Magnitude of the Drift Velocities . . . . .	45
2.11. The Parallel Adiabatic Invariant . . . . .	46
<b>III. Application of Orbit Theory to Static Problems</b> . . . . .	50
3.1. Introduction . . . . .	50
3.2. Straight $\mathbf{B}$ Lines with No External Force . . . . .	51
3.3. Curved $\mathbf{B}$ Lines with No External Force . . . . .	52
3.4. The General Static Problem with No External Force . . . . .	53
3.5. The Parallel Motion . . . . .	57
3.6. Summary of Equations for General Static Problem . . . . .	62
3.7. The Virial Theorem . . . . .	68
3.8. Forcefree Configurations . . . . .	70

<b>IV. Application of Orbit Theory to Dynamic Problems</b> .....	74
4.1. Introduction.....	74
4.2. Plasma under Gravity in a Magnetic Field.....	74
4.3. General Two-Dimensional Problem with Straight $\mathbf{B}$ Lines.....	78
4.4. The Dielectric Effect between Conducting Plates.....	83
4.5. Comments on the General Dynamic Problem.....	89
<b>V. Exact Static Solutions</b> .....	90
5.1. Introduction.....	90
5.2. Straight-in Case with Equal Masses.....	90
5.3. Straight-in Case with Actual Masses.....	94
5.4. Solution of the Boundary-Layer Problem by Means of the Liouville Equation.....	96
5.5. Two Simplifying Approximations.....	98
5.6. Straight-in Case with the Liouville Equation.....	99
5.7. The Case with Isotropic Distribution in the Plasma.....	100
5.8. Method for Constructing General Solution for Plane Symmetry.....	103
5.9. General Solution for Circular Cylindrical Symmetry.....	104
5.10. A Cylindrical Example with Equal Masses.....	105
<b>VI. Small-Amplitude Plasma Waves</b> .....	108
6.1. Introduction.....	108
6.2. The Case with No Applied Magnetic Field.....	108
6.3. Justification of Neglect of Magnetic Force.....	116
6.4. Resonance or Landau Damping.....	116
6.5. Hydromagnetic or Alfvén Waves.....	119
6.6. Waves of Arbitrary Frequency; $\mathbf{k} \parallel \mathbf{B}_0$ .....	125
6.7. Waves of Arbitrary Frequency; $\mathbf{k} \perp \mathbf{B}_0$ .....	129
6.8. The Initial-Value Problem.....	133
6.9. Oblique Waves at Zero Temperature.....	135
<b>VII. Hydromagnetic Shocks</b> .....	137
7.1. Introduction.....	137
7.2. Propagation Perpendicular to $\mathbf{B}$ .....	138
7.3. Propagation Parallel to $\mathbf{B}$ .....	146
7.4. The Structure of Hydromagnetic Shocks: Weak Shocks.....	150
7.5. The Wave Model for Transverse Shocks.....	158
<b>VIII. Collision Effects</b> .....	162
8.1. Introduction.....	162
8.2. Fluctuations in a Neutral Plasma.....	162
8.3. Screening of Electric Fields by Plasmas.....	168
8.4. The Debye Length in Nonequilibrium Situations.....	171

8.5. Coulomb Scattering.....	172
8.6. Effect of a Magnetic Field.....	177
8.7. The Problem of Correlations.....	178
<b>IX. Diffusion in Velocity Space</b> .....	181
9.1. Introduction.....	181
9.2. The Boltzmann Equation.....	181
9.3. Thermal Equilibrium.....	184
9.4. Generalizations of the $H$ Theorem.....	191
9.5. Reduction of the Scattering Term.....	192
9.6. Initial Scattering of a Collimated Beam.....	196
9.7. Mean Rates of Change of Velocity and Energy.....	197
9.8. The Fokker-Planck Approximation.....	205
9.9. Electrical Conductivity of a Plasma.....	211
<b>X. Diffusion in Coordinate Space Across a Magnetic Field</b> .....	215
10.1. Introduction.....	215
10.2. The Configuration at Thermal Equilibrium.....	215
10.3. Deviations from Thermal Equilibrium.....	218
10.4. Perturbation due to Collisions.....	222
10.5. Diffusion of Particles.....	225
10.6. Some Isothermal Diffusion Solutions.....	228
10.7. Pressure Balance and the Perpendicular Conductivity.....	232
10.8. Heat Conduction.....	234
10.9. The Semi-static Pinch with Finite Conductivity.....	236
<b>XI. Stability</b> .....	241
11.1. Introduction.....	241
11.2. The Completely Diamagnetic Plasma.....	241
11.3. Instability in Low-Pressure Plasmas.....	249
11.4. The Energy Method for Examining Stability.....	254
11.5. Stability of the Pinch.....	260
11.6. Further Refinements of Stability Theory.....	261
11.7. Velocity-Driven Instabilities.....	262
<b>XII. Coupling of Plasmas and Radiation</b> .....	265
12.1. Introduction.....	265
12.2. Radiation in a Plasma at Thermal Equilibrium.....	265
12.3. The Nonequilibrium Case.....	269
12.4. Bremsstrahlung.....	269
12.5. Cyclotron Radiation.....	274
<b>Bibliography</b> .....	278
<b>Subject Index</b> .....	295
