Preface ix
Plasma formulary xi

Part I Introduction to plasma theory

1 Introduction 3
1.1 Preliminary remarks 3
1.2 Langmuir waves and ion sound waves 5
1.3 Cerenkov emission and Landau damping 6
1.4 The response tensor 9
1.5 The Landau prescription 12
Exercise set 1 14

2 The response of an unmagnetized plasma 17
2.1 The cold plasma approach 17
2.2 The Vlasov approach 19
2.3 Maxwellian distributions 20
2.4 The dispersion equation 21
2.5 The absorption coefficient 23
2.6 Formal theory of weakly damped waves 25
Exercise set 2 27

Part II Instabilities in unmagnetized plasmas

3 Reactive instabilities 33
3.1 Effect of a beam on wave dispersion 33
3.2 The counter-streaming instability 34
3.3 The weak-beam instability 36
3.4 Suppression due to increasing velocity spread 36
3.5 The Buneman instability 38
3.6 The Weibel instability 39

3.7 Interpretation of complex solutions 40
Exercise set 3 42

4 Kinetic instabilities 45
4.1 The bump-in-tail instability 45
4.2 Quasilinear relaxation: the time-asymptotic state 48
4.3 Current and ion-beam driven growth of ion sound waves 50
4.4 Heat conduction and ion sound turbulence 52
4.5 Loss cone instability for Langmuir waves 53
4.6 Axisymmetric distributions: general case 56
Exercise set 4 61

5 Particle motions in waves 63
5.1 Perturbations in the orbit of a single particle 63
5.2 Phase bunching and reactive growth 66
5.3 Wave trapping 69
5.4 Interpretation of the kinetic instability 72
5.5 The forward-scattering method and the time-asymptotic assumption 74
5.6 The ponderomotive force 76
Exercise set 5 77

6 Weak turbulence theory 79
6.1 The emission formula: Cerenkov emission 79
6.2 Probabilities for nonlinear processes 81
6.3 Kinetic equations 84
6.4 Scattering of Langmuir waves off thermal ions 87
6.5 Scattering of Langmuir waves by ion sound waves 91
6.6 Plasma emission 94
Exercise set 6 97

7 Nonlinear instabilities and strong turbulence 100
7.1 Nonlinear correction to the dispersion equation 100
7.2 Parametric instabilities 104
7.3 The free electron maser: plasma laser 107
7.4 The Zakharov equations and strong Langmuir turbulence 111
7.5 Solitons 113
Exercise set 7 115

Part III Collision-dominated magnetized plasmas

8 Magnetohydrodynamics 119
8.1 The MHD equations 119

8.2 Small amplitude MHD waves 121
8.3 Surface waves 124
8.4 The MHD energy principle 127
8.5 Jump conditions at a discontinuity 129
8.6 MHD shock waves 132
Exercise set 8 136

9 MHD instabilities 139
9.1 Ideal MHD instabilities 139
9.2 The Kelvin–Helmholtz instability 144
9.3 Collisions and transport coefficients 146
9.4 Magnetic merging and reconnection 149
9.5 Tearing instabilities 153
Exercise set 9 157

Part IV Instabilities in magnetized collisionless plasmas

10 Dispersion in a magnetized plasma 163
10.1 Dielectric tensors 163
10.2 The cold plasma modes 167
10.3 The magnetoionic modes 170
10.4 Low frequency modes 175
10.5 Quasilinear equations for $\mathbf{B} \neq 0$ 179
Exercise set 10 181

11 Electron cyclotron maser emission 184
11.1 Classification of gyromagnetic processes 184
11.2 The gyrotron instability 187
11.3 The parallel-driven cyclotron maser 190
11.4 The perpendicular-driven cyclotron maser 194
11.5 Applications of electron cyclotron maser emission 200
11.6 Phase bunching and wave trapping 203
Exercise set 11 206

12 Instabilities in warm and in inhomogeneous plasmas 209
12.1 Longitudinal waves in warm plasmas 209
12.2 'Parallel' cyclotron waves 213
12.3 Ion cyclotron waves in multi-ion plasmas 215
12.4 The Bernstein modes 218
12.5 Drift motions and the drift kinetic equation 221
12.6 Dielectric tensor for an inhomogeneous plasma 224
12.7 Drift waves 227
Exercise set 12 230

13 Instabilities due to anisotropic fast particles 233
13.1 Resonant scattering 233
13.2 Whistler waves in the magnetosphere: quasilinear theory 238
13.3 Discrete VLF emissions 239
13.4 Scattering of streaming cosmic rays 242
13.5 Small amplitude Fermi acceleration 244
13.6 Acceleration at shock fronts 247
Exercise set 13 250

Appendix A The plasma dispersion function 252
Appendix B Bessel functions 253
Appendix C Collision frequencies 255
Appendix D Transport coefficients 257
