Basic Equations.....	xvii
----------------------	------

PART I

THE APPROXIMATION OF A VANISHING MAGNETIC FIELD

Chapter 1. Instabilities of a Cold Homogeneous Plasma	3
§1.1. Hydrodynamic Approximation	3
§1.2. Characteristic Plasma Oscillations	4
§1.3. Oscillations of a Homogeneous Plasma at Rest	6
§1.4. Dispersion Equation for a Plasma Consisting of Several Directed Beams	10
§1.5. The Two-Stream Instability.....	11
§1.6. Instability Due to a Relative Motion of Electrons and Ions.....	16
§1.7. Instability of a Stream with an Inhomogeneous Velocity Profile	18
§1.8. Instability of an Electron Stream between Cathode and Anode.....	20
Appendix. The Permittivity Tensor	23
Bibliography.....	25
Chapter 2. Kinetic Description of Plasma Oscillations and General Conditions of Stability and Instability.....	27
§2.1. Plasma Oscillations in the Kinetic Formulation.....	27

§2.2. Collisionless Dissipation of the Energy of Oscillations	30
§2.3. Energy Classification of Weakly Growing Perturbations	33
§2.4. Damping of Electron Plasma Oscillations in a Maxwellian Plasma	37
§2.5. Ion-Acoustic and Ion Plasma Oscillations	39
§2.6. Sufficient Condition for the Stability of Homogeneous Collisionless Plasma	42
§2.7. Conditions for Stability and Instability of a Plasma against Electrostatic Perturbations when $B_0 = 0$	44
§2.8. Some Examples of Stable and Unstable Distributions (in the Approximation of Electrostatic Oscillations and $B_0 = 0$)	49
Bibliography	54
Chapter 3. Kinetic Instabilities	57
§3.1. Influence of the Thermal Motion of the Particles on the Hydrodynamic Two-Stream Instability ...	57
§3.2. Instability of a Beam with a Large Thermal Spread in a Dense Cold Plasma	59
§3.3. Instability of a Cold Beam in a Dense Hot Plasma	62
§3.4. Instability of a Plasma with a Relative Motion of the Electrons and Ions	64
§3.5. Excitation of Ion-Electron Oscillations of a Plasma by an Ion Beam	67
Bibliography	70
Chapter 4. Spatially Localized Perturbations in an Unstable Plasma and the Amplification of Waves	73
§4.1. Introductory Remarks	73
§4.2. Perturbations with Many Wave Numbers in an Unstable Plasma	76
§4.3. Absolute and Convective Instability	80
§4.4. Wave Packets	83
§4.5. Excitation of Oscillations of an Unstable Plasma by External Sources and the Amplification of Waves	86
Bibliography	91

Chapter 5. Influence of Plasma Inhomogeneity on Instability	93
§5.1. Trajectory Integral Method	93
§5.2. Permittivity of a Weakly Inhomogeneous Plasma	96
§5.3. Limits of Applicability of the Approximation of a Homogeneous Plasma in Stability Problems ..	99
§5.4. Wave Packet in an Inhomogeneous Plasma. Quasiclassical Approximation	101
Bibliography	110
Chapter 6. Instabilities of a Collisional Plasma	113
§6.1. Limits of Applicability of the Collisionless Approximation in Stability Problems	113
§6.2. Hydrodynamics of a Fully Ionized Collisional Plasma	120
§6.3. Ion-Acoustic Instability of a Fully Ionized Plasma in an Electric Field	123
§6.4. Ion-Acoustic Instability of a Weakly Ionized Plasma in an Electric Field	125
Bibliography	127

PART 2

PLASMAS IN A MAGNETIC FIELD

Chapter 7. Permittivity of a Plasma in a Magnetic Field	131
§7.1. Permittivity of a Cold Plasma	131
§7.2. Permittivity of a Hot Plasma	132
§7.3. Permittivity in the Low-Frequency Approximation	135
§7.4. Permittivity in the High-Frequency Approximation	136
Bibliography	138
Chapter 8. Branches of Electrostatic Oscillations of a Plasma in a Magnetic Field	141
§8.1. Oscillations of a Cold Plasma	141
§8.2. Oscillations with Frequencies Near Electron Cyclotron Harmonics	146
§8.3. Ion-Acoustic and Ion Plasma Oscillations of a Plasma in a Magnetic Field	147

§8.4. Ion-Cyclotron and Electron-Acoustic Oscillations	151
Bibliography	156
Chapter 9. Plasma with Longitudinal Electron Beams	159
§9.1. Cold Plasmas and a Beam for $\omega_{pe} > \omega_{pe}$	159
§9.2. Cold Plasmas and Beam in a Strong Magnetic Field	164
§9.3. Instability of a "Hot" Beam in a Dense Cold Plasma	166
§9.4. Instability of a Slow Beam in a Hot Plasma	170
§9.5. Instability of a One-Dimensional Distribution with One Maximum	172
§9.6. Excitation of Plasma Oscillations by a Radially Inhomogeneous Electron Beam	174
§9.7. Thresholds of Two-Stream or Beam Instabilities in a Bounded Plasma in a Strong Magnetic Field	179
Bibliography	181
Chapter 10. Plasmas with Non-Maxwellian Electrons	183
§10.1. Introductory Remarks on the Properties of a Strongly Anisotropic Plasma	183
§10.2. Instability of Hydrodynamic Type of an Anisotropic Plasma	187
§10.3. Kinetic Instability of an Anisotropic Plasma	194
§10.4. Instability of a Plasma with a Non-Maxwellian Transverse Velocity Distribution of the Particles	197
Bibliography	202
Chapter 11. Plasmas with a Group of Non-Maxwellian Electrons	205
§11.1. Excitation of Oscillations of a Cold Plasma by a Group of Fast Particles with an Anisotropic Velocity Distribution	205
§11.2. Two-Stream-Anisotropic Instabilities	208
§11.3. Excitation of Plasma Oscillations by a Group of Fast Particles with a Nonequilibrium Transverse Velocity Distribution	210

§11.4. Excitation of Plasma Oscillations by an Azimuthal Electron Stream	213
Bibliography	216
Chapter 12. Plasmas with a Longitudinal Current	217
§12.1. Plasmas with a High Current Velocity in a Weak Magnetic Field	217
§12.2. Plasma with a High Current Velocity in a Strong Magnetic Field	218
§12.3. Excitation of High-Frequency Ion-Acoustic Oscillations by a Current	219
§12.4. Excitation of High-Frequency Ion-Acoustic Oscillations by Runaway Electrons	220
§12.5. Ion-Cyclotron Instability	221
§12.6. Excitation of Low-Frequency Ion-Acoustic Oscillations	222
Bibliography	223
Chapter 13. Plasmas with a Transverse Current	225
§13.1. Instability of a Cold Plasma	225
§13.2. Excitation of Electron-Acoustic Oscillations in a Plasma with Hot Ions	227
§13.3. Excitation of Ion-Acoustic Oscillations in a Plasma with Hot Electrons	229
§13.4. Excitation of Plasma Oscillations by a Transverse Ion Stream	231
Bibliography	233
Chapter 14. High-Frequency Instability of Plasmas with a Non-Maxwellian Transverse Velocity Distribution of the Ions	235
§14.1. Instability of a Plasma with a δ -Function Transverse Velocity Distribution of the Ions	235
§14.2. Instability of a Plasma with a Broadened Transverse Velocity Distribution of the Ions	237
§14.3. Instability of a Stationary Ion Distribution in an Adiabatic Trap	238
§14.4. Stabilizing Role of the Electron Temperature	241
§14.5. Plasmas with Two Groups of Ions	243

§14.6. Plasmas of Finite Length	246
Bibliography	249
Chapter 15. Plasmas with Anisotropic Ions	251
§15.1. Low-Density Strongly Anisotropic Plasma with Cold Electrons	251
§15.2. Low-Density Plasma with Cold Electrons and Finite $T_{\parallel i}/T_{\perp i}$	255
§15.3. Low-Density Strongly Anisotropic Plasma with a Finite Electron Temperature	257
§15.4. Dense Plasma with Finite Electron Temperature	260
Bibliography	262
Chapter 16. Growth of Ion-Cyclotron Oscillations in a Plasma with Transversely Non-Maxwellian Ions	265
§16.1. Instabilities of Plasmas with Cold Electrons	265
§16.2. Instabilities of a Dense Plasma with Hot Electrons	269
§16.3. Excitation of Cyclotron Oscillations by Resonant Electrons in a Low-Density Plasma ...	272
§16.4. Excitation of Oscillations by Resonant Electrons in a Plasma of Intermediate Density	273
§16.5. Review of Results Obtained in §§ 16.1-16.4	274
§16.6. Instability of a Plasma Consisting of Two Groups of Ions	275
§16.7. Role of a Longitudinal Inhomogeneity of the Magnetic Field. Modified Negative Mass Instability	276
§16.8. Role of a Transverse Inhomogeneity of the Magnetic Field. Instability due to Magnetic Drift	277
Bibliography	278
Chapter 17. Excitation of Ion-Cyclotron Oscillations by Ion Beams	281
§17.1. Cyclotron Instability due to Relative Azimuthal Motion of Ions and Electrons	281
§17.2. Excitation of Plasma Oscillations by an Azimuthal Ion Beam	285

§17.3. Excitation of Plasma Oscillations by a Longitudinal Ion Beam with an Anisotropic Velocity Distribution	287
§17.4. Excitation of Plasma Oscillations by an Azimuthal Ion Beam in a Magnetic Field with a Longitudinal Inhomogeneity	288
Bibliography	289
