Preface	ix
Introduction	xi
1. Some results from the linear theory	1
1.1. Leontovich's parabolic approximation	1
1.2. Waves in uniform plasmas	2
1.3. Dispersion relations modified to include the effect of plasma inhomogeneities	8
1.4. Flute instability in the Earth's magnetosphere	11
1.5. Rossby waves in the atmosphere	21
2. Nonlinear equations of the acoustic type	25
2.1. Model equations for acoustic waves in isotropic media	25
2.2. 1D and 2D soliton solutions to the Kadomtsev-Petviashvili equation and their stability	28
2.3. Stability of 3D Kadomtsev-Petviashvili solitons. Collapse and self-focusing	33
2.4. The stabilizing-multiplier method for soliton solutions	37
2.5. Coupled soliton states (multisolitons)	39
2.6. Model equation for acoustic waves in an anisotropic medium. 3D ion acoustic solitons in a magnetic field	44
2.7. Nonlinear propagation of Alfvén and magnetosonic waves along a magnetic field	46
2.8. Propagation of magnetosonic waves at an angle to a magnetic field	49
3. Nonlinear equations of the optical type	53
3.1. Nonlinear Schrödinger equation	53
3.2. Langmuir waves in an isotropic plasma. Zakharov's equation	59

3.3.	Equation for Langmuir waves in a magnetic field. Steady-state solutions and their stability	62
3.4.	Collapse and cavitons	68
3.5.	Multisoliton solutions of the nonlinear Schrödinger equation	71
4.	Diamagnetism of cyclotron plasma waves and cyclotron solitons	75
4.1.	Nonlinear variation of the magnetic field	75
4.2.	Model equation for long wavelength cyclotron oscillations	78
4.3.	Model equations for short wavelength cyclotron oscillations	85
4.4.	Self-focusing and three-dimensional localization of a cyclotron wave traveling along a magnetic field	87
4.5.	Diamagnetic self-focusing of electromagnetic cyclotron waves traveling across a magnetic field	94
4.6.	Effects of cyclotron solitons	100
5.	Solitary vortices in the atmospheres of rapidly rotating planets	103
5.1.	Structures in atmospheres and oceans	103
5.2.	Equations for shallow water	104
5.3.	Equations for a shallow atmosphere	107
5.4.	The geostrophic approximation	108
5.5.	Zonal flows and their stability	110
5.6.	Larichev-Reznik soliton solutions and vortex streets	112
5.7.	Dispersive spreading of perturbations in gyrotropic media	119
5.8.	Stability of soliton solutions to the Charney equation	120
5.9.	Anticyclones in a zonal flow	124
5.10.	Rossby solitons in the disk of the galaxy	129
5.11.	Laboratory modeling of Rossby solitons	132
5.12.	3D-solitons in a stratified atmosphere	141
5.13.	Thermal enhancement of atmospheric vortices	147
6.	Two-dimensional drift vortices in plasmas	151
6.1.	Drift and convection in plasmas	151
6.2.	Perturbations of the ion density and pressure in drift waves	152
6.3.	Potential drift vortices	156

CONTENTS

vii

6.4. Kadomtsev-Pogutse equations and Alfvén vortices	159
6.5. Solitary Alfvén vortices in an inhomogeneous, finite-pressure plasma	163
6.6. Solitary Alfvén vortices in an inhomogeneous low-pressure plasma	173
6.7. Condensation of Alfvén waves into vortex tubes	176
6.8. Observation of Alfvén vortices in the magnetospheric plasma	178
6.9. Dissipative generation of electron drift vortices	181
6.10. Flute vortices	184
6.11. Solitary ballooning vortices	189
6.12. Vortex convection and anomalous resistivity in plasmas	193
7. Solitary toroidal vortices	197
7.1. Solitary steady-state vortices in ideal hydrodynamics	197
7.2. Transient 2D solutions in Lagrange variables	200
7.3. Solitary vortices in magnetohydrodynamic theory	204
7.4. Model equation for electron hydrodynamics	210
7.5. Toroidal electron vortices	213
7.6. Topological solitons in media with constant magnetization	216
8. Conservation of helicity and the Lyapunov stability of MHD structures	221
8.1. Conservation of magnetic helicity	221
8.2. Lyapunov stability of MHD structures	223
Appendix 1	
Summary of simplified (model) equations	229
Appendix 2	
Lyapunov stability of equilibrium solutions for evolving systems	235
References	239
Index	247
