

C O N T E N T S

PREFACE

ORGANIZING COMMITTEE

1. COLLISION PROCESSES IN GASES

1.1.	<u>Collision processes in swarms</u>	
1.1.1	The mobilities of electrons in helium and helium-neon mixtures E. E. Mainwaring, J. D. Swift	1
1.1.2	Measurements of cross sections for thermal electron scattering on Cs and Ba atoms V. I. Babanin, Yu. A. Dunaev, A. S. Mustafaev, V. I. Sitnov, A. Ya. Ender	2
1.1.3	Investigation of backscattering of photoelectrons in noble gases D. Felsch, P. Pech	3
1.1.4	Radiation coefficients of nitrogen second positive group measured in swarm V. V. Ursoević, Lj. D. Zeković, S. R. Stojković, J.V. Božin	4
1.1.5	Drift velocities and mobilities of ions in hydrogen R. Hackam, J.I. Chaudry, D. J. Mellor	5
1.1.6	Transport and ionization coefficients in nitrogen glow discharge plasmas calculated on measured electron energy distribution Ju. A. Ivanov, L. S. Polak, D. I. Slovetsky	6
1.1.7	The mobility and diffusion of mass-indentified protons in neon gas O. J. Orient	7
1.2	<u>Elementary processes</u>	
1.2.1	<u>Excitation and ionization</u>	
1.2.1.1	Mechanism and cross-section for Cs_2^+ formation in low pressure discharge cesium plasma Yu. P. Korcheyoy, I. N. Hilkko	8
1.2.1.2	Influence of the tube diameter on the 6^3P_1 level density in an alternative mercury-argon discharge J. J. Damelincourt, D. Karabourniotis, P. Simon, A. Dimitriadi	9

1.2.1.3	ArHg^+ -ions in the mercury-argon low pressure discharge mass spectrometric analysis of the formation process G. Franck, H. Lüdemann, F. Schipp	10
1.2.1.4	Nonindependent discharge in nitrogen with volume ionization by ultraviolet radiation E. A. Muratov, V. D. Pis'menny, A. T. Rakhimov, A. A. Semenov, E. P. Velikhov	11
1.2.1.5	Vibrational temperature in molecular discharge plasmas V. N. Ochkina	12
1.2.1.6	On the potentialities of the application of Tikhonov's regularization method for calculation of electron energy distribution density A. M. Devyatov, Y. E. Kralkina, S. D. Shushurin, L. M. Volkova	13
1.2.1.7	Atomic level populations in He-Cd mixture discharge K. Mašek, E. Vokatý	14
1.2.1.8	Additional excitation and ionization in N_2 and $\text{Ar}_2 + \text{N}_2$ by diffusion of excited and charged species J. Janča, A. Tálský	15
1.2.1.9	Ionisation, recombination, and hydrogen and helium excited states density in MPD JET V. M. Gordfarb, E. V. Il'yina, G. A. Lukyanov, V. V. Sachin	16
1.2.1.10	Experimental investigation of xenon excitation and ionisation in electron-atom collisions R. V. Vasiliieva, V. A. Shingarkina, N. M. Lobashova	17
1.2.2	<u>Multiphoton ionization</u>	
1.2.2.1	Polarization dependence of the multiphoton ionization probability J. Bakos, A. Kiss, L. Szabo, M. Tandler	18
1.2.2.2	Investigation of the frequency dependence of the multiphoton ionization of the metastable helium atoms J. Bakos, M. L. Nagajeva, V. G. Ovchinnikov, G. Rubin	19
1.2.2.3	Effect of light polarization on high order multiphoton ionization Y. Gontier, M. Trahan	20

1.2.2.4	Induced resonances Y. Gontier, M. Trahan	21
1.2.2.5	Resonant multiphoton ionization of a cesium atomic beam by a tunable wavelength Q-switched neodymium laser J. Morellec	22
1.2.2.6	The multiphoton ionization probability of alkali atoms N. L. Manakov, M. A. Preobragensky, L. P. Rapoport	23
1.2.2.7	Multiphoton ionization of molecular cesium with a tuneable dye laser C. B. Collins, B. W. Johnson, D. Popescu, G. Musa, M. L. Pascau, I. Popescu	24
1.2.2.8	Frequency-dependent dipole polarizabilities of rare gas atoms N. L. Manakov, V. D. Ovsyannikov, L. P. Rapoport	25
1.2.2.9	Atomic multiplet in intense variable field B. G. Katzenelson, B. A. Zon	26
1.2.2.10	The peculiarities of gas atom luminescence in the presence of the powerful laser radiation V. A. Kovarsky, N. F. Perelman, S. S. Todyrashku	27
1.2.2.11	Spectrum of hydrogen-like atom in laser field N. L. Manakov, L. P. Rapoport, B. A. Zon	28
1.2.2.12	Atomic multiquantum transition caculations with model potential N. L. Manakov, V. D. Ovsyannikov, L. P. Rapoport	29
1.3	<u>Processes in afterglows</u>	
1.3.1	Electronic recombination and the effects of metastables in a helium afterglow A. Wayne Johnson, J. B. Gerard	30
1.3.2	Spectra emitted in a high pressure electron beam excited recombining helium afterglow C. B. Collins, A. J. Cunningham-ham, B. W. Johnson	31
1.3.3	The influence of metastable collisions on the suprathermal electron distribution in a helium afterglow plasma I. Stoll	32

1.3.4	The electron temperature dependence of the effective recombination in an afterglow of a neon-helium mixture P. Lukáč, J. Trnovec, O. Mikus	33
1.3.5	The effect of metastables on the transition from ambipolar to free diffusion: He-Ar mixtures R. A. Gerber, J. B. Gerard	34
1.3.6	The effect of atom temperature on the dissociative recombination rate in noble gases K. P. Novikova	35
1.3.7	Kinetic study of the ultra-violet continuum of argon A. Biriot, H. Brunet, J. Galy, P. Milliet	36
1.3.8	Decay of the ultraviolet continuum radiation in rare gases J. Lenaerts, W. Wieme	37
1.3.9	Violations of thermodynamic equilibrium in course of recombination and expansion of ionized gases S. S. Filippov, L. I. Gudzenko, Y. I. Sytsko, S. I. Yakovlenko, V. V. Yevstigneyev	38
1.3.10	The inverse population of excited states during the decay of plasma in cesium and potassium vapor E. E. Antonov, Yu. P. Korcheyoy, V. I. Lukashenko	39
1.3.11	Study of the decay of a pulsed photoionized plasma in an electronegative gas J. Bruneteau, E. Fabre	40
1.3.12	Attachment coefficient of electrons to the neutral particles of a meteoric plasma R. Sh. Bibarsov, P. B. Babadzhanyan	41
1.4.	<u>Chemical processes</u>	
1.4.1	<u>Chemical processes I.</u>	
1.4.1.1	Influence of distribution function on dissociation in glow discharge J. Preiss	42
1.4.1.2	Dissociation equilibrium in electric arc L. S. Polak, D. I. Slovetsky, R. D. Todesaitė	43

1.4.1.3	Effect of ion-molecule reactions on ionization equilibrium in nonisothermal plasmas ($T \neq T_e$) L. S. Polak, D. I. Slovetsky	44
1.4.1.4	Spectroscopic diagnosis of a nitrogen reflex discharge A. Vicherat, J. C. Georges	45
1.4.1.5	The rate coefficient for the quenching reaction $\text{Na}^* + \text{H}_2 \rightarrow \text{NaH} + \text{H}$ A. Netteln	46
1.4.1.6	Study of the nitridation of magnesium in nitrogen dc glow discharge J. Kodymová, L. Láska	47
1.4.1.7	Measurement of dissociation in CO_2 discharge by means of acoustic wave velocity L. Pekárek, M. Chvojka, H. Urbánková	48
1.4.1.8	Electron attachment in oxygen-carbon dioxide mixtures D. A. Price, J. L. Moruzzi	49
1.4.1.9	The influence of ion-molecule reactions on electrical breakdown in N_2O and $\text{N}_2\text{O}/\text{SF}_6$ mixtures J. Dutton, F. M. Harris, D. B. Huges	50
1.4.1.10	Chemical reactions under flare and corona discharge conditions in air R. L. Andrianova, N. B. Bogdanova	51
1.4.1.11	Negative ions in sulfur dioxide Y. Le Coat, G. Lefèvre, L. Bouby	52
1.4.2	<u>Chemical processes II.</u>	
1.4.2.1	The comparison of the temperature values obtained from the R 1 and R 2 branches of CH radical spectrum at 3064 Å J. Ferdinand	53
1.4.2.2	Excitation of atoms of a colloidal plasma gas phase by crystallizing particles of its disperse phase N. A. Sinaiski	54
1.4.2.3	Chemical reactions in weakly ionized gases of hydrocarbons and perfluorocarbons E. Heckel	55

1.4.2.4	The time behaviour of the electric field in the column of a d.c. discharge in C ₆ H ₆ -Ne - Penning mixtures H. Sabadill, H. Deutsch	56
1.4.2.5	Chemical processes in radiofrequency discharges at moderate pressures P. Capizzutto, F. Gramarossa, P. Maiocne, E. Molinari	57
1.4.2.6	Identity of positive ions from break arcs E. W. Gray, L. G. Mc Knight, J. M. Sawina	58
1.4.2.7	Interactions of ions derived from break arcs (with respect to contact activation) E. W. Gray, L. G. Mc Knight, J. M. Sawina	59

2. SURFACE PHENOMENA

2.1.	<u>Surface emission and collision processes</u>	
2.1.1	Effect of target structure on the energy distribution of secondary ion-electron emission W. Soszka	60
2.1.2	Secondary ion emission from metal under medium energy positive ions bombardement M. Y. Khan, S. A. Khan	61
2.1.3	Emission of plasma radiation from thin silver film by the impact of high energy protons M. Y. Khan, S. A. Khan	62
2.1.4	Emission of plasma and transition radiations by traversal of alfa particles through solids R. M. Chaudhari, N. M. Butt, M. A. Chaudhry	63
2.1.5	Glow discharge influence on the rate coefficients of the N-atoms heterogeneous recombination L. S. Polak, D. I. Slovetsky, R. D. Todesaité	64
2.1.6	Study of relaxation of metastable atoms of He and Ar on Pyrex walls N. Sadeghi, J. C. Pebay-Peyroula	65
2.1.7	The influence of an ion wall current on the transmittance of a glass wall M. R. Teixeira, R. Ross	66
2.1.8	The effect of ion bombardment on the interface states in MOS structures L. Pranavychius, A. Auлас	67
2.1.9	Interaction of plasma with a dielectric surface B. Norton, E. R. Wooding	68

2.2.	<u>Electrode phenomena</u>	.
2.2.1	<u>Cathode spot emission</u>	
2.2.1.1	Interaction of a gas discharge with an oxide cathode A. Bouwknegt, A. G. van der Kooi	69
2.2.1.2	Numerical simulation of transient joule heating of a cathode protrusion by field emission J. Mitterauer, E. Oitzl, P. Till	70
2.2.1.3	Experimental evidence of different emission modes on mercury film cathodes of pulsed high current arcs J. Mitterauer	71
2.2.1.4	Cathode sputtering in pulse mode T. I. Donchey	72
2.2.1.5	Erosion and ionization in the cathode spot regions of vacuum arcs C. W. Kimblin	73
2.2.1.6	On the formation and acceleration mechanisms of the arc cathode spot plasma jet H. Minoo	74
2.2.1.7	Velocity distribution of ion flux from the cathode of a steady-state low-pressure mercury arc G. Eckhardt	75
2.2.2	<u>Electrode spots formation and dynamics</u>	
2.2.2.1	Arc spot formation on cold electrodes H. K. Messerle, N. L. Ho, L. P. Heffernan	76
2.2.2.2	Cathode temperature effect on the electrical discharge V. Yu. Baranov, S. V. Drobjazko, V. N. Knizhnikov, I. I. Ponoma- rjev	77
2.2.2.3	Vacuum arcs subjected to axial magnetic fields C. W. Kimblin, R. E. Voshall	78
2.2.2.4	The expansion phase of the high current vacuum arc M. R. Barrault, R. L. Haywood	79
2.2.2.5	Electrode material effect on vacuum arc movement in transverse magnetic fields S. M. Celikatova, I. A. Lukat'skaya	80
2.2.2.6	A new experiment on retrograde motion M. Mailänder	81

XVI

2.2.2.7	Anode spot temperatures in vacuum arcs D. Klapas, R. Holmes	82
2.2.2.8	Negative anodic drop of potential in arc discharges A. V. Yershov, I. G. Paneyin	83
2.2.3	<u>Electrode and wall sheath</u>	
2.2.3.1	General conclusions on the cathode processes theory V. I. Khwesiuk, N. P. Kozlov, A. M. Zimin	84
2.2.3.2	Concerning the boundary conditions for electrons in the cathode region of a high-current gas discharge E. P. Vaulin	85
2.2.3.3	Experimental investigation of ion bombardment of cathodes in crossed electric and magnetic field V. J. Maljugin, G. G. Sominisky, S. A. Friedrichov	86
2.2.3.4	Investigation of heat fluxes from arc to cathode A. S. Anshakov, G. N. Dandaron, M. F. Zhukov, E. K. Urbakh	87
2.2.3.5	Comparison of admittance measurements with a sheath theory of positive bias potentials I. L. Freeson, H. B. Mallik	88
2.2.3.6	Space charge sheath of a plasma in contact with a wall G. H. Ecker	89
2.2.3.7	Influence of ion temperature on the wall floating potential in collisionless electrical sheath T. Wartanowicz	90
2.3.	<u>Surface discharges</u>	
2.3.1	The investigation of charge formed during the development of a surface discharge of solid dielectric A. V. Ivanov, V. P. Larionov	91
2.3.2	The nanosecond surface discharge study by using dust figure techniques Y. Murooka, S. Kaya	92

- 2.3.3 One-sided ultra high frequency "nonresonance" multipactor discharge 93
 I. A. Kossy, G. S. Lukianchikov,
 M. M. Savchenko
- 2.3.4 An experimental investigation of impulsive low pressure of secondary electronresonant discharge in hydrogen 94
 W. I. Alexandrow, D. A. Ganichev, W. I. Presnow

3. ELECTRICAL DISCHARGES

3.1. Low pressure discharges

3.1.1 Breakdown and pulsed discharges

- 3.1.1.1 Electrical implosion in vacuum of thin metal cylinders 95
 M. Soszka, W. Soszka, Z. Les

- 3.1.1.2 Experimental study of electric breakdown conditions in a flow of ionized gas in external and induced electric fields 96
 Yu. A. Nikuev, E. F. Lebedev

- 3.1.1.3 Pre-breakdown phenomena of a positive point to plane in air at low pressure 97
 M. Akazaki, M. Hara, T. Oshige

- 3.1.1.4 Discharge development in long positive point/plane gaps 98
 A. Aked, S. J. Dale

- 3.1.1.5 Investigation of the pre-ignition characteristics of a Knudsen diode with a hot cathode 99
 E. P. Busygina, V. G. Grigor'yants,
 V. G. Makarenko, I. P. Yavor

- 3.1.1.6 A calculation of spatial ionization growth in helium 100
 F. J. de Hoog

- 3.1.1.7 Formative time lags and ionization processes in He+O, 1% Ar mixture 101
 V. A. Poscharski, F. M. Jablon-ski

- 3.1.1.8 The effect of electrodes on breakdown of argon at low pressure 102
 A. B. Parker, J. D. Pace

XVIII

3.1.1.9	Secondary ionization processes in argon discharges L. de Vreeze, W. Bruynooghe	103
3.1.1.10	The development of steady state ionization currents between parallel plates in hydrogen M. Shimozuma, Y. Sakai, H. Tagashira, S. Sakamoto	104
3.1.1.11	The applicability of similarity to the breakdown of hydrogen at low gas pressure A. B. Parker, J. D. Pace	105
3.1.1.12	Simulation of electron detachment in electronegative gases P. Bayle, M. Bayle, M. Crokaert	106
3.1.2	<u>Glow discharges</u>	
3.1.2.1	Helium discharges in continuous metal tubes M. Brooks, A. L. S. Smith	107
3.1.2.2	Ionization explosion of glow discharge A. A. Vedenov, A. F. Vitshas, A. M. Dykhne, G. D. Mylnikov, A. P. Napartovich	108
3.1.2.3	Investigation of very long Faraday dark spaces A. Rutschner, Ch. Wilke	109
3.1.2.4	Effects of magnetically induced Hall currents on a static argon glow discharge M. S. Dortsch, D. L. Murphree	110
3.1.2.5	Faraday dark space - positive column transition in magnetized low-current low-pressure argon discharges G. Popov	111
3.1.2.6	Current amplification in a d.c. glow discharge in the presence of a transverse magnetic field M. Toma, Gh. Popa, M. Sandulovicu	112
3.1.2.7	Light fluctuations in a quiet low-current low-pressure argon discharge column under the influence of a local transversal magnetic field E. Ose, L. Rothhardt	113
3.1.2.8	Cathode fall in the externally sustained glow discharge in the presence of the emission A. A. Vedenov, A. P. Napartovich, K. N. Ulyanov	114

3.1.2.9	Highvoltage forms of the glow discharge K. N. U l a n o v	115
3.1.2.10	Thickness of the cathode fall space in the glow discharge V. V. V l a s o v , L. G. G u s e v a , A. E. K u l i k o v	116
3.1.3	<u>Hollow cathode discharges</u>	
3.1.3.1	Interferometric analyses of NeII spectral lines from a hollow-cathode discharge W. C. K r e y e	117
3.1.3.2	On the energy distribution of fast electrons and the intensities of lines in the hollow cathode Yu. M. K a g a n , R. I. L j a g u s t c h e n - k o , S. N. K h v o r o s t o v s k y	118
3.1.3.3	Radial variations of characteristics of the magnesium hollow cathode discharge with helium and argon fillings F. Kh. K i d r a s o v , A. M. D e v y a - t o v , L. M. V o l k o v a , L. V. A r k - h i p o v a	119
3.1.3.4	Axial variation of characteristics of the magnesium hollow cathode discharge with helium and argon fillings F. Kh. K i d r a s o v , A. M. D e v y a - t o v , L. M. V o l k o v a , L. V. A r k - h i p o v a	120
3.1.3.5	Low pressure hollow cathode discharge and some properties of it S. I b a d o v	121
3.1.3.6	On the high voltage and low voltage modes of the hollow cathode discharge in the magnetic field O. Z a m f i r , C. P o p o v i c i	122
3.1.3.7	On the high tension mode in the hollow cathode discharge I. M a t e e s c u , E. A v r a m , C. P o p o v i c i	123
3.1.3.8	Effectivity and plasma parameters of double cathode discharges M. S t i e b e r , W. S t e r n	124
3.1.3.9	Observations at hollow cathode discharges in Laval nozzles A. R u t s c h e r , H. E. W a g n e r	125

3.1.3.10	Pulse operation of hollow cathode arc discharge (HCAD) J. Ko jad i n o v i c, H. Mi n o o , A. Pi l o r g e t	126
3.1.3.11	Temperatures in a hollow cathode argon arc discharge with pressure variation B. van der Si j d e , P. A. W. Tie l e - m a n s	127
3.1.4	<u>Crossed field devices, magnetron and P.I.G. discharges</u>	
3.1.4.1	The hollow cathode effect in a gas magnetron with axial cathode cavity Iu. E. K r e i n d e l , G. G. V a s y l y e v a	128
3.1.4.2	Formative processes of magnetically confined gas discharges at low pressures K. K a g e y a m a	129
3.1.4.3	Measurement of the macroscopic velocity of ions in a weakly ionized plasma in the crossed fields V. B a b i c k ý , K. K o l á č e k , J. Kr a c í k	130
3.1.4.4	The usage of the low pressure discharge for plasma commutator S. Pek á r e k , P. S t u d e n o v s k ý	131
3.1.4.5	On the two modes of discharge in magnetrons and P.I.G. at low pressure A. Ra é v , V. V e l e f f	132
3.1.4.6	Experimental study of the statistical lag of a Penning discharge S. I. I v a n o v	133
3.1.4.7	Stationary and dynamic characteristics and state diagrams of the discharge with oscillating electrons G. V. Smirnitskaja , E. M. Reikhru del , G. A. Y a g e a - z a r y a n	134
3.1.4.8	Effect of anode adjustment and ion density on the behaviour of Penning type high voltage discharge N. A. Ker val i sh vili , V. P. K o r t k h o n j i a	135
3.1.4.9	A new geometry of the cold-cathode Penning discharge P. Croitoru , C. Moldovan , Gh. Popa , M. Sandu lo v i c i u	136

3.1.5	<u>Positive columns</u>	
3.1.5.1	Diffusion theory of the positive column for ionization degrees from 10^{-8} to 10^{-4} S. Pfaau, R. Winkler	137
3.1.5.2	Steady-state theory of a non-isothermal positive column in a magnetic field D. B. Illic, F. W. Crawford	138
3.1.5.3	A study of the neutral flow effusing from the positive column of a neon discharge L. Červená n, S. Veis	139
3.1.5.4	The ion current to the discharge tube wall in a positive column of an argon discharge V. Martišovits	140
3.1.5.5	Gas pumping induced by discharges G. Cernogora, H. Minoo	141
3.1.5.6	Electron temperature measurements in a current modulated plasma column C. J. Burkle ey, D. M. Barry, M. C. Sexton	142
3.1.5.7	Electron energy distribution function in Ne-He mixture V. Hrachová - Rezáčová	143
3.1.5.8	Experimental study of the transition from ambipolar to free diffusion in a cesium plasma M. Numano, J. R. Cussenot, M. Fabry	144
3.1.5.9	The effect of current pulse on the electric field in the column of a DC discharge in O ₂ H. Sabbadil	145
3.1.6	<u>Plasma diodes and sources</u>	
3.1.6.1	The influence of electron-atom collisions upon electron motion in a gas-filled diode V. I. Babanin, A. Ya. Endere	146
3.1.6.2	Ion density relaxation in thermionic cesium plasma disturbed by a current pulse T. I. Donchev	147
3.1.6.3	Bipolar current in spherical diode with thermoionic cathode and plasma anode M. A. Zavjalov, A. A. Kamunin	148

3.1.6.4	The influence of the gas ionization in diode with a plasma cathode on position of the emission plasma surface V. A. G r u z d e v , Iu. E. K r e i n d e l , J. M. L a r i n	149
3.1.6.5	Cs-atom concentration in a short low-voltage arc Y. L. S e r o v , I. P. Y a v o r	150
3.1.6.6	Effect of space charge and electron scattering on the passage of current between parallel electrodes S. S. F i l i p p o v , E. A. M o r o z o v a	151
3.1.6.7	Theory of electron motion in space charge layer with electron-atom collisions F. G. B a k s h t , V. G. I v a n o v	152
3.1.6.8	The line spectrum of argon discharge in a diode with incandescent cathode V. I. M i l j e v i c	153
3.1.6.9	Control of radial density profile of a cesium plasma by resonance light absorption J. Y a m a d a , T. O k u d a	154
3.1.7	<u>High frequency discharges</u>	
3.1.7.1	Effect of magnetic field on the plasma in an R/P ion source M. Y. K h a n , S. A. K h a n	155
3.1.7.2	Diffusion, recombination and role of negative ions in a high-frequency gas discharge B. E. M e i e r o v i c h	156
3.1.7.3	Microwave breakdown in a toroidal magnetic field A. I. A n i s i m o v , N. I. V i n o g r a - d o v , B.P. P o l o s k i n	157
3.1.7.4	UHF neon discharge in a waveguide at medium pressures V. A. D o v z h e n c k o , G. S. S o l n t - z e v	158
3.1.7.5	Unipolar HF discharge burning in inert gases V. K a p i č k a	159
3.1.7.6	Superhigh frequency discharge freely expanding towards a power flux V. M. B a t e n i n , V. S. Z r o d n i k o v , I. I. K l i m o v s k y , V. R. K h a m r a e v	160

3.1.8	<u>Electron Beam and gas dynamic lasers</u>	
3.1.8.1	Electron-beam sustained discharge G. Fournier, D. Pigache	161
3.1.8.2	A study of combined discharge exciting the CO_2 laser with a high-current electron beam V. Yu. Baranov, S. A. Golubev, S. S. Kingssep, I. V. Novobrants- sev, V. D. Pismenny, V. P. Smir- nov, A. M. Spector, A. N. Sta- rostin, A. P. Streletsov, E. P. Velikhov	162
3.1.8.3	Nonindependent stationary gas discharge in $\text{N}_2\text{-CO}_2$ mixtures at atmospheric pressure with electron-beam ionization S. A. Golubev, A. F. Pal', I. G. Persiantsev, V. D. Pismenny, A. T. Rakhimov, E. P. Velikhov, Yu. K. Zemtsov	163
3.1.8.4	1730 Å laser terminating on a dissociating level A. Wayne J., J. B. Gerardo	164
3.1.8.5	Mechanisms controlling the decay of the 1730 Å continuum of xenon radiation A. Wayne J., J. B. Gerardo	165
3.1.8.6	Investigation of the energetic characteristics of powerful laser systems of the electroioniza- tion type Yu. V. Afonin, V. Byshewski, A. G. Ponomarenko, R. I. So- loukhin, V. N. Tishchenko	166
3.1.8.7	Parameters of noble gas discharges in magnetic fields at high currents and low pressures W. Eberl	167
3.1.8.8	Numerical calculations of CO_2 gasdynamic laser parameters M. Brunné, J. Milewski, J. Stanczak, A. Zielinski	168
3.1.9	<u>Gas discharge lasers</u>	
3.1.9.1	Vibrational relaxation and heat transfer in carbon monoxide gas discharge laser plasma N. N. Sobolev, V. V. Sokovikov, V. G. Taraneenko	169
3.1.9.2	Light amplification in CO-laser discharge E. N. Lotkova, V. F. Savchenko, N. N. Sobolev	170

3.1.9.3	Energy and electron density in plasma of the CO-laser	171
	V. Vasil'iu, M. Z. Novgorodov, A. G. Sviridov, N. N. Sobolev	
3.1.9.4	Diagnostics and mass spectroscopy of molecular HCN-laser plasmas	172
	H. J. Schöttzau, F. K. Kneubühl	
3.1.9.5	A note on the formation of excited HCN-molecules in submillimeter-wave lasers	173

3.2 High pressure discharges

3.2.1 Sparks

3.2.1.1	Relation between peak radiation intensity and current crest in sparks	179
	A. E. Vlastos	
3.2.1.2	The study of spark discharge phenomena between rod electrodes arranged in parallel	180
	Y. Murooka	
3.2.1.3	Spark formation time measurement in Ne, He and Ne-He mixture	181
	A. G. Sterligov, Yu. P. Usov	
3.2.1.4	The development of spark channels on a pre-ionized track	182
	N. S. Rudenko, V. I. Smetanin	

3.2.1.5	Measurements of spark channel deionization A. S é v i g n y , T. B. J o r d a n , R. S a i n t - A r n a u d	183
3.2.2	<u>Breakdown</u>	
3.2.2.1	Pre-breakdown phenomena of a negative point to plane in air at atmospheric pressure M. A k a z a k i , I. T s u n e y a s u	184
3.2.2.2.	On deviations from the singularity in compressed gases V. I. P o p k o v , A. G. L y a p i n , O. W. S h i t e r b i n a	185
3.2.2.3	Electrical breakdown of dry and humid air in divergent fields G. R. G o v i n d a R a j u , R. H a c k a m	186
3.2.2.4	The effect of impulse rise-time on corona cloud growth and breakdown J. K. H e p w o r t h , B. A. T o z e r	187
3.2.2.5	About self-maintained discharge initiation at pulsed breakdown of short gaps E. S. B u t o r o v a , J. V. K i s s e l e v	188
3.2.2.6	Effect of spark breakdowns on characteristics of positive point-to-plane corona in compressed air V. I. P o p k o v , A. G. L y a p i n , E. N. S h e v t s o v	189
3.2.2.7	On the reproducibility of negative lightning impulse breakdown voltage distributions for a rod-rod gap S. V i b h o l m , A. P e d e r s e n	190
3.2.2.8	On the theory of the cathode-directed streamer A. V. R o d i n , A. N. S t a r o s t i n	191
3.2.3	<u>Corona</u>	
3.2.3.1	Measurements and calculations in a cylindrical corona discharge H. A l b r e c h t , E. W a g n e r	192
3.2.3.2	The positive and negative corona discharge at high temperature D. S k a l n ý , S. V e i s	193
3.2.3.3.	The interpulse (Townsend) phase of negative coro- nas in the Trichel pulse regime in air R. S. S i g m o n d , K. T o r s e t h a u g e n	194

3.2.3.4	The Trichel pulse phase of negative coronas in the Trichel pulse regime in air K. Torsethaugen, R. S. Sigmond	195
3.2.3.5	Montecarlo simulation of streamer branching S. Badaloni, I. Gallimberti	196
3.2.3.6	An investigation on leader reilluminations in long gaps G. Bald o, M. Re a	197
3.2.3.7	Flare discharge radiation in atmospheric air at stationary voltage N. B. Bogdanova, B. G. Pevch e v	198
3.2.3.8	Current-voltage unipolar corona characteristic in the system of CO-focusing rotation hyperboloids E. N. Shevts o v	199
3.2.3.9	The onset potential of hf corona in the frequency range from 25 kHz to 1.4 MHz in the point-to-plane discharge gap H. Korg e, K. Kudu	200
3.2.3.10	Similitude in the case of alternating corona discharge G. Dragan, M. Ungureanu	201
3.2.3.11	Basic energetic parameters of the bipolar high frequency discharge C. Tes ař	202
3.2.3.12	Relation among macro-and microparamters in h.f. torch discharges V. Farský, J. Janča	203
3.2.3.13	Effects of heating in hf unipolar torch discharge by superimposed dc electric field I. G. N. Rod y W i r j a	204
3.2.4	<u>General properties of arcs</u>	
3.2.4.1	Nonequilibrium in a stabilized deuterium arc V. L. Nizovsk y, K. A. Khodakov, V. I. Shabashov	205
3.2.4.2	Simplified analysis or radial demixing in multi- element high-pressure LTE arcs G. L. Rogoff	206
3.2.4.3	A new arc model H. K. Messerle, H. E. Lee	207
3.2.4.4	Arc dynamics and dissociation M. R. Haque	208

3.2.4.5	The cooling and thermal breakdown of a dynamic arc A. V. Avdonin, V. G. Egorov, K. I. Seryakov	209
3.2.4.6	Helical instability in cylindrical arcs K. A. Ernest, J. Kopainsky, J. Mentel	210
3.2.5	<u>Decay and development of high pressure discharges</u>	
3.2.5.1	Formation and decay of free-burning heavy current arc in nitrogen at pressure of 1 to 5 atm E. A. Azziov, N. A. Akhmerov, I. P. Shedko	211
3.2.5.2	Experimental study of a transient axially blown arc L. Niemeyer, E. Schade	212
3.2.5.3	Decay of an axially blown cylindrical arc W. Hermann	213
3.2.5.4	Time constant calculation of electric arc in different gases L. I. Kolonina, B. A. Uryakov	214
3.2.5.5	Computer simulation of discharge development in oxygen L. E. Kline	215
3.2.5.6	Method of reducing fast electron beam current, initiating glow discharge of high pressure Yu. I. Bichkov, Yu. D. Korolev, G. A. Mesyats	216
3.2.5.7	Brush-cathode discharge at atmospheric pressure A. E. Vlastos	217
3.2.6	<u>Flows and heat fluxes</u>	
3.2.6.1	Specific features of arc discharge in transverse gas flow E.A. Azziov, N. A. Akhmerov, I. P. Shedko, P. S. Firsov	218
3.2.6.2	Measurement of turbulent flow in a supersonic nozzle arc L. Niemeyer	219
3.2.6.3	A simple model of a tube flow with superimposed arc W. Rother	220

XXVIII

3.2.6.4	On the conditions of current and mass flow rate for a stationary coaxial arc-discharge H. H ü g e l	221
3.2.6.5	Numerical results for the enthalpy flux production and the local efficiency of a coaxial arc at high axial mass input U. K l e i n , G. S c h m i t z	222
3.2.6.6	The theory of arc column stabilized in the tube with gas flow M. Sh. G a l i m a r d a n o v , G. Ju. D a u t o v , R. Ch. I s m a g i l o v	223
3.2.6.7	The highest energy values of intensity cooled high-pressure arc of alternating current with constant and variable length O. H a v e l k a	224
3.2.6.8	Arc dynamics in arc heated tunnel A. S. A n s h a k o v , M. F. Z h u k o v , A. N. T i m o s h e v s k y	225
3.2.6.9	Electric arc heater with gas interelectrode insert M. F. Z h u k o v , Yu. I. S u h i n i n , A. I. Y a n k o v s k y	226
3.2.6.10	Heat transfer from low current dc arcs P. N o r m a n , I. F e l l s	227
3.2.7	<u>Light sources</u>	
3.2.7.1	Radiation from electrical discharges in tin iodide vapour L. R e h d e r , E. F i s c h e r , R. L o r e n z	228
3.2.7.2	Radial temperature measurements of arcs containing sodium, scandium, thorium and mercury iodides E. C. O d e l l , D. O. W h a r m b y	229
3.2.7.3	Investigation of tin iodide arcs W. F u n k , H. G. K l o s s , F. S e r i c k	230
3.2.7.4	Interpretation of the continuum radiation of a pure AlCl_3 -plasma G. M ü c k	231
3.2.7.5	Quantitative radiation measurement of a pure aluminum - chloride - plasma G. M ü c k , H.-P. P o p p	232

3.2.7.6	Time resolved diagnostics of an indium-iodide-discharge J. Seehawer, M. Zauter	233
3.2.8	<u>High current pulses and stabilized arcs</u>	
3.2.8.1	Arc stabilization with a toroidal vortex R. W. Polimann, J. J. Busser, P. Hellingsman	234
3.2.8.2	Channel temperature of the pulsed heavy current discharge through the air N. I. Falkowsky	235
3.2.8.3	Dependence of negative-pulse breakdown jitter on discharge circuit parameters in atmospheric gaps G. Mueller, R. Suess	236
3.2.8.4	X-rays in diagnostics of pulse arcs in argon at a pressure of $\sim 1000 \text{ atm}$ V. P. Kantsedal, R. V. Mitin, G. P. Glazunov	237
3.2.8.5	Radiation losses from high current free burning arcs D. C. Strachan, T.R. Blackburn	238
3.2.8.6	Axial velocities in the high current free burning arc D. C. Strachan, M. R. Barrault	239
3.2.9	<u>Arches and discharges in magnetic fields</u>	
3.2.9.1	Experimental investigations on the radially free full circle arc W. Tiller	240
3.2.9.2	Theoretical investigation of the full circle arc H.-G. Stäblein	241
3.2.9.3	High current arcs in a toroidal magnetic field F. C. Schüller, O. G. Kruyt, W. van den Boom, R. S. de Haas	242
3.2.9.4	A toroidal electrodeless arc J. Look, G. J. Boixman, H. A. van der Laan	243
3.2.9.5	A steady rotating plasma experiment S. F. Marlier	244
3.2.9.6	Rotationel velocity and current density distributions in stationery rotating arcs N. Nathrath	245

3.2.9.7	Response of a short arc driven by a magnetic field M. G. Drouet, R. Beaudet	246
3.2.9.8	Distribution of the current in a moving arc. Frequency response of the measuring probe R. Beaudet, M. G. Drouet	247
3.2.9.9	Influence of the electrode effects on dc arc plasma rotation frequency M. Zlatanovic	248
3.2.9.10	On electrode jets M. D. Cowley	249
3.2.9.11	On the possibility of the influence of a magnetic field on the properties of electric discharges in molecular gases V. V. Korneev, A. N. Starostin	250
3.2.9.12	Time-resolving spectroscopic investigation of impulsive discharges in a magnetic field A. Petrakiev, I. Koleva, D. Stefanova	251
3.2.9.13	Arc motion in a non-homogeneous magnetic field V. Bakardjiev, B. E. Djakov	252
3.3.	<u>Laser induced plasmas</u>	
3.3.1	The investigation of neutron and X-ray radiation and gasdynamic parameters of laser plasma E. V. Aglitski, N. G. Basov, V. A. Boikov, S. M. Zakharov, O. N. Krokhan, G. V. Sklizkov	253
3.3.2	Temperature and density diagnostics of laser plasma from X-ray spectra of He-like and H-like multicharged ions E. V. Aglitski, V. A. Boikov, A. V. Vinogradov, E. A. Yukov	254
3.3.3.	Determination of certain parameters of the microplasma obtained through the action of laser radiation on a solid sample in an argon medium and with timeresolution of the spectrum G. Dimitrov, A. Petrakiev, V. Gagov	255
3.3.4	Mechanism of laser-induced gas ionization and breakdown E. Panarella	256
3.3.5	Interaction of a TEA-CO ₂ laser with thin foils J. Martineau, A. Bonnier, K. J. Parbhakar	257

3.3.6	Pressure dependence of spontaneous magnetic fields in a laser-produced plasma A. W. Cooper, R. S. Bir d	258
3.3.7	Selective excitation of sodium atoms in a decaying laser-produced plasma P. H. Richards, B. A. To z e r	259
3.3.8	Experimental and theoretical studies of multi-charged ions of laser produced plasma Ju. A. Bykovsky, N. N. Degtya-renk o, V. F. Jelesin, Ju. P. Kozyrew, V. V. Kondrashov, E. E. Lovetsky, A. N. Polya-nitsev, S. M. Silinov, B. Ju. Shar k o v , V. C. Fetisov	260
3.3.9	Stimulated Brillouin effect in plasma L. Aubrecht	261
3.3.10	CO_2 laser generated schock above solid targets D. C. Emmo n y , R. P. Howson , L. J. Willi s	262

4. PLASMA PHYSICS

4.1.	<u>Plasma theory</u>	
4.1.1.	Electron distribution function for a weakly ionized plasma in a strong electric field K.-U. Riemann	263
4.1.2	Equations for higher order approximations to distribution functions and macroscopic quantities for a fully ionized plasma in a magnetic field Alf H. Øien	264
4.1.3	To the evaluation of the mean square micro-field in a plasma R. W. Larenz	265
4.1.4	Superposition of binary and turbulent collisions K.-H. Spatschek	266
4.1.5	Superkinetic equation for non-uniform systems in a time-dependent external field. Exact equation for strong collisionnal plasma turbulence R. Bal escu , J. H. Mis g uich	267
4.1.6	Equilibrium densities in two-temperature hydrogen plasma A. A. Skorupski , S. Suckewer	268

4.1.7	Pseudo-thermodynamic model for nonthermal plasma S. Suckewer	269
4.1.8	Particles and radiation distributions as a self-consistent problem for a seab of nonthermal plasma A. Kuszell, S. Suckewer	270
4.2.	<u>Transport phenomena</u>	
4.2.1	The electrical conductivity of a plasma H. Schirmer, I. Stober	271
4.2.2	The calculation of the mobility, heat conductivity, and thermo-diffusion in a multicomponent magnetized plasma K. Suchy	272
4.2.3	Measurement of electrical conductivity in partially ionized potassium vapours M. Luknárová	273
4.2.4	The dependence of the ion transport cross section on the gas species in cold dense plasmas R. Radtke, K. Guenther	274
4.2.5	High Speed determination of the electrical conductivity of the plasma A. Konakovský	275
4.2.6	Measurements of the electrical and thermal conductivities of a nitrogen plasma at atmospheric pressure and $T < 15000$ K J. Aubretton, P. Fauchais, J. M. Baronne, W. Mouragues	276
4.2.7	Theoretical evaluation of the electrical and thermal conductivities of a nitrogen plasma at atmospheric pressure and at $T \leq 18000$ K J. Aubretton, P. Fauchais, W. Mouragues	277
4.2.8	Electrical and thermal conductivity of ionized nitrogen M. Capitelli, R. S. Devoto	278
4.2.9	The influence of electronically excited states on the reactive thermal conductivity M. Capitelli	279
4.2.10	Composition and electrical conductivity of kerosene TS 1 combustion plasma J. Bartl, O. Coufal, V. Kubáň, R. Morawitz	280

4.2.11	Notes about thermal instability of a cold plasma in the presence of a strong electric field A. V. M i t r o f a n o v	281
4.3.	<u>Waves in plasmas</u>	
4.3.1	<u>General theory of plasma waves</u>	
4.3.1.1	The Lagrangian approach to wave - particle interaction J. G. T u r n e r	282
4.3.1.2	Electrostatic waves equation in an inhomogeneous hot magnetized plasma G. P e l l e t i e r	283
4.3.1.3	Dissipative properties of linearized Vlasov- Maxwell equations and Landau's damping A. J. T u r s k i	284
4.3.1.4	The role of dissipation during the process of nonlinear saturation of explosive instability E. Ja. K o g a n , V. N. O r a e v s k i i , V. P. P a v l e n k o .	285
4.3.1.5	On the connection between the continuum eigen- functions and the dispersion function of the Vlasov operator Z. S e d l á č e k	286
4.3.1.6	Correlation between the nature of velocity space anisotropy and the frequency of electrostatic electroncyclotron instabilities J. J a c q u i n o t , C. L e l o u p , R. P e l l a t and M. A b d a l l a , G. C h a n t e u r	287
4.3.1.7	Electrostatic waves with frequencies above the gyrofrequency in the plasma with a loss-cone V. I. K a r p m a n , Ju. K. A l e k h i n , N. D. B o r i s o v and N. A. R j a b o v a	288
4.3.1.8	Energy, momentum and mass transport in a transverse wave packet R. K l í m a , V. A. P e t r ž í l k a	289
4.3.1.9	High frequency resonances in infinite fully ionized magnetoplasmas Zh. D. G e n c h e v	290
4.3.1.10	Nonlinear statistical theory for Langmuir plasma condensation F. Kh. K h a k i m o v , V. N. T s y t o v i c h	291
4.3.1.11	On the theory of plasma motion at the condi- tions of parametric resonance V. P. M i l a n t i e v , V. B. R o u b t s o v	292

4.3.1.12	A method for determining the wavenumber spectrum for plasma waves E. R o w b e r g	293
4.3.2	<u>Ionization waves I.</u>	
4.3.2.1	Contribution to the experimental verification of the non-hydrodynamical properties of the electron gas in ionization waves M. Š i c h a	294
4.3.2.2	Experimental test in helium of an ionization waves (striations) theory V. Peřina, K. Rohlena, T. Růžička	295
4.3.2.3	Use of the correlation method in the dispersion measurements of the ionization waves Z. Němecák	296
4.3.2.4	Forward ionization waves excited in a large dia- meter tube V. Krejčí, M. Holík	297
4.3.2.5	Some remarks on ionization waves in the argon- discharge at medium pressure D. Venzke	298
4.3.2.6	The effect of finite radius on ionization and ion waves D. Twomey, R. N. Franklin	299
4.3.2.7	Ionization waves in a cross-electrical-and-magne- tic-fields discharge A. M. Bishayev, V. P. Gerasimov, V. Kim, L. A. Latishhev and G. G. Shishkin	300
4.3.3	<u>Ionization Waves II.</u>	
4.3.3.1	Electron energy distribution function in standing striations in hydrogen E. Desoppe	301
4.3.3.2	Measurements of the electron energy distribution function in standing striations A. A. Saitsev, M. Z. Novgorodov, J. A. Savchenko	302
4.3.3.3.	Influence of synchronous oscillations in the discharge on the frequency spectrum of ionization waves J. Krásá, L. Pekárek	303

4.3.3.4	The influence of some elements of the external circuit on ionization waves L. Biborosch, Gh. Popa, C. Tirda, M. Sandulovicu	304
4.3.3.5	The dependence of the boundary for self-excitation of ionization waves on the power of the auxiliary high frequency field J. Safrankova	305
4.3.3.6	Velocity-modulated ionization waves (striations) R. M. Perkin	306
4.3.3.7	Non-linear interaction between ionization waves in a glow discharge S. Take da, K. Ohe	307
4.3.3.8	Zone of potential jump in developed strata A. V. Nedospasov, V. G. Petrov	308
4.3.3.9	Collision of striations I. Grabe c	309
4.3.4	<u>Drift waves</u>	
4.3.4.1	Density gradient drift waves and anomalous resistivity E. D. Ambrogio, A. Nocentini	310
4.3.4.2	Stabilizing effect of an electron temperature gradient on collisionless drift instabilities P. Brossier, P. Deschamps, R. Gravier, R. Pellat, C. Renaud	311
4.3.4.3	Frequency entrainment of a drift instability by nonlinear effects in a plasma R. Tavzes, M. Čerček	312
4.3.4.4	Fast longitudinal resistive drift waves in a weakly ionized plasma B. Milli c	313
4.3.4.5	Oscillations of drift-dissipation nature in weakly ionized plasma B.N. Shvilkina, S. A. Postnikov, A. A. Skovoroda	314
4.3.4.6	Decay instability of non-linear collisionless drift waves V. V. Demchenko, I.A. El - Naggar, A. M. Hussein	315
4.3.4.7	Plasma instability and azimuthal currents J. V. Kubarev	316

XXXVI

4.3.5	<u>Acoustic and ion-acoustic waves</u>	
4.3.5.1	Velocity of sound for a non-equilibrium plasma S. Kel'm	317
4.3.5.2	Influence of ion-sound oscillations on plasma parameters A. A. Kuzovnikov, V. S. Swi- ridkina, V. V. Tarasova	318
4.3.5.3	Anode glow of d.c. glow discharge, as the place of the ionic acoustic oscillations D. Grossu, Cs. Grossu	319
4.3.5.4	Excitation of turbulence by magnetoacoustic waves A. Ág, K. H. Finken, R. Läuter, A. Stampa, H. Tuczek	320
4.3.5.5	Amplitude modulation of ion acoustic waves by superposition with electron free streaming waves J. Behnke, H. Kagele, R. Leven	321
4.3.5.6	Propagation of ion acoustic waves at frequencies approaching the ion plasma frequency A. E. Aubert, W. van Daele	322
4.3.5.7	Ion acoustic instability in a helium positive column: theory and experiment D. B. Ilic, F. W. Crawford, G. M. Wheeler, S. A. Self	323
4.3.5.8	Ion-sound instability effect on plasma heatconduc- tivity E. V. Mishin	324
4.3.5.9	Background noise in a low pressure mercury arc discharge H. G. Jones, J. W. Sturges	325
4.3.6	<u>H.F. wave plasma interaction</u>	
4.3.6.1	Anomalous absorption of intense electromagnetic waves in a plasma at high magnetic fields J. Musil, F. Záček, P. Schmidberger	326
4.3.6.2	Parametric excitation of waves in magnetized plasma N. E. Andreev, G. M. Batanov, K. A. Sarksy'an	327

4.3.6.3	Parametric decay instability at the ion cyclotron frequency induced by a large amplitude electron Bernstein wave in a plasma B. E. Keen, W.H.W. Fletcher	328
4.3.6.4	The interaction of microwave radiation with a stream of collisionless plasma insulated from waveguide walls V. I. Barinov, I. R. Gekker, V. A. Ivanov, D. M. Karfieldov	329
4.3.6.5	Measurement of Q value in the presence of an ion sound wave parametrically excited in Tonks-Dattner resonance S. Ikezawa, T. Okuda	330
4.3.6.6	Parametric wave exciting in plasma in space-periodic high frequency field L. L. Pasechnik, V. F. Semenyuk	331
4.3.6.7	Analysis of the backscatter spectrum from a plasma subjected to a strong RF signal H. Kimm, K. J. Harker, F. W. Crawford	332
4.3.6.8	Numerical study of the high amplitude Langmuir oscillations Yu. S. Sigosov, Yu. V. Khodirev	333
4.3.6.9	Threshold field for purely growing instability of a warm plasma column I. Zhelezakov, P. Nenovski	334
4.3.6.10	Parametric amplification and parametric generation of alfvén waves in wall stabilized dc arcs B. Stefanov, R. Enikov	335
4.3.7	<u>Landau damping, generation of harmonics and sidebands</u>	
4.3.7.1	Harmonic and subharmonic generation of electrostatic waves in collisionless plasmas E. Verheest, G. J. Lewak	336
4.3.7.2	Generation of harmonic Langmuir waves due to nonlinear Landau interaction N. Martinov	337
4.3.7.3	Instability of the harmonics of an electromagnetic wave by means of a non-linear Landau interaction A. Samain, N. Martinov	338
4.3.7.4	Resonant and nonresonant harmonic generation D. E. Smith, E. J. Powers	339

4.3.8.3	Geometrical resonances above the lower hybrid magnetic field M. K r ä m e r , H. S c h l ü t e r	346
4.3.8.4	Kinetic theory of the interaction of an electromagnetic wave with a plasma column R. G. S t o r e r	347
4.3.8.5	Mixing of electrostatic waves in a radially inhomogeneous hot electron plasma F. G e r v a i s , M. G u i l l e m o n t , A. Q u e m e n e u r	348
4.3.8.6	High-frequency surface waves in a semibounded warm current plasma A. S h i v a r o v a	349
4.3.8.7	On the mode theory of rectangular waveguide containing longitudinally magnetised uniaxial compressible moving plasma P. N. G u p t a , P. K. J a i n , D. S i n g h , S. K. T o l p a d i	350

4.3.8.8	Limitations imposed by weak low frequency fluctuations in nonlinear electron wave experiments R. N. Franklin, G. J. Smith, S. M. Hambberger	351
4.3.8.9	The effect of plasma inhomogeneity on the damping of slow-whistlers V. Kopacký	352
4.3.8.10	Nonlinear theory of quasimonochromatic electrostatic and whistler mode packets in inhomogeneous plasma V. J. Karpmann, Ya. N. Istromin, D. R. Shklyar	353
4.3.9	<u>Propagation, reflection, scattering of H.F. waves and heating of plasmas</u>	
4.3.9.1	The structure of the wave field near the hybrid frequencies and application to incoherent scattering M. Fichet, I. Fidone, G. Granata	354
4.3.9.2	Alfven wave propagation in a nonuniform magnetic field N. F. Cramer, F. J. Paoloni	355
4.3.9.3	Theoretical and experimental study of the electrostatic longitudinal wave propagation in a plasma with cutoff Maxwellian distribution J. P. Treguier, D. Henry	356
4.3.9.4	An observation of differences in upstream and downstream propagation of electron waves on positive columns B. A. Aničin, V. M. Babović, D. M. Šulic	357
4.3.9.5	Electrostatic wave reflection in a non-uniform plasma A. S. Ratner, C. W. Roberson, J. L. Hirshfield	358
4.3.9.6	Theory for incoherent scatter based on three-wave-interaction K. J. Harker, F. W. Crawford	359
4.3.9.7	Direct registration of a plasma beam reflected by a non homogeneous magnetic field with local ECR K. S. Golovanivsky, L. A. Pokhmelnykh	360

4.3.9.8	Enhancement of modified two-stream instability by R. F. electric field S. Takamura, T. Okuda	361
4.3.9.9	Heating of a plasma by MHD waves L. Biggeli, A. R. Collins, R. C. Cross, I. S. Falconer, C. N. Watson-Munro	362
4.3.9.10	Direct currents produced by HF heating of plasma R. Klíma	363
4.3.9.11	Inductive plasma acceleration with non-sinusoidal electromagnetic standing waves R. Köhne, A. Meert	364
4.3.9.12	Incoherent scattering of light by hot magnetized plasmas T. J. M. Boyd, I. N. Stewart	365
4.3.10	<u>Shock waves and hydrodynamic discontinuities</u>	
4.3.10.1	On the temperature of precursor electrons ahead of the shock front in inert gases T. V. Zhikhareva, G. K. Tumakayev	366
4.3.10.2	On separation distance in a magnetically driven shock tube C. T. Chang	367
4.3.10.3	Collision free shock wave in magnetic channel flow K. Kuriki, M. Inutake	368
4.3.10.4	Shock wave study of equation of non-ideal cesium plasma B. N. Lomakin, V. E. Fortov	369
4.3.10.5	Decay of the initial discontinuity in hydrodynamics of collisionless plasma A. P. Meshcherkin, L. P. Pitaevskii	370
4.3.11	<u>Waves and oscillations</u>	
4.3.11.1	Plasma oscillations as the cause of the Ar ⁺ laser limitation A. E. Fotiadý, S. A. Friedrichov	371
4.3.11.2	Behavior of the electron energy near the cyclotron harmonics in a plasma column generated by microwave power H. Beerwald, G. Böhm	372
	Ionization dynamics of a linear coaxial microwave discharge H. Beerwald, B. Kampmann	502

4.3.11.3	Study of the oscillations in reflex-arc plasma V. M. K u l y g i n	373
4.3.11.4	Positive corona discharge noise and oscillations O. H a i m a n , G. V a r j a s	374
4.3.11.5	Investigation of discharge plasma oscillations in gaseous mixtures in a longitudinal magnetic field A. V. N e d o s p a s o v , K. I. E f e n - d i y e v , K. M. D a s h ' d a m i r o v , G. I. G a r i b o v	375
4.3.11.6	Fluctuations in the cathode neighbourhood of low-current, low-pressure argon discharges G. P o p o v , A. V r a n c h e v	376
4.3.11.7	Magnetic buoyancy instability in astrophysical plasma with constant temperature and constant alfven speed V. Č a d e ž	377
4.4	<u>Beam plasma interaction</u>	
4.4.1	<u>Wave excitation in plasmas by electron beams</u>	
4.4.1.1	Fundamental and satellite waves generation in modulated beam-plasma systems P. Š u n k a	378
4.4.1.2	Stationary wave excitation in plasma by a modu- lated beam K. J u n g w i r t h , L. K r l í n	379
4.4.1.3	Excitation of the nonlinear plasma wave by a modulated beam K. J u n g w i r t h , P. Š u n k a	380
4.4.1.4	Nonlinear cold beam - plasma interaction K. J u n g w i r t h	381
4.4.1.5	Excitation of electron-plasma oscillations by low-frequency waves in beam-plasma discharge K. P. K i r d j a s h e v , V. M. P o l y a k o v	382
4.4.1.6	Excitation of elektromagnetic waves by a group of fast monoenergetic electrons T. D. K a l a d z e , J. G. L o m i n a d z e	383
4.4.1.7	Longitudinal electromagnetic waves excitation in plasma by hollow relativistic electron beam S. T. I v a n o v	384

- 4.4.1.8 Structure of the oscillations at the non-linear beam-plasma interaction 385
A. I. Rogashkova, M. B. Tseittlin
- 4.4.1.9 Transformation of the electron beam velocities distribution function at the interaction of modulated electron beam with plasma 386
A. I. Rogashkova, M. B. Tseittlin, V. A. Lavrovskiy, I. F. Kharchenko
- 4.4.2 Beam-plasma discharge, stabilization and trapping phenomena
- 4.4.2.1 Discharge in megavolt spark gap initiated by electron beam 387
A. S. Elchaninov, V. G. Emelyanov, B. M. Kovalchuk, Yu. F. Potalitsyn
- 4.4.2.2 Glow discharge initiated by electron beam in the mixture of gases $\text{CO}_2 + \text{N}_2 + \text{He}$ at high pressure 388
Yu. I. Bichkovich, Yu. A. Kjurbatov, V. V. Kreminjev, G. A. Messyats, V. V. Savin
- 4.4.2.3 Beam-plasma discharge without magnetic field 389
V. P. Popovich, I. F. Kharchenko, E. G. Shustein
- 4.4.2.4 Formation of beam-plasma discharge without magnetic field 390
T. A. Novskowa, V. P. Popovich, S. A. Rogashkov, A. I. Rogashkova, I. F. Kharchenko
- 4.4.2.5 Single-mode interaction at turbulent regime of beam-plasma discharge 391
V. A. Lavrovskiy, I. F. Kharchenko, E. G. Shustein
- 4.4.2.6 Plasma trapping in the beam-plasma system 392
V. T. Astrelin, N. S. Buchelnikova
- 4.4.2.7 On partial stabilization of beam-plasma instability by "axial" plasma inhomogeneity 393
V. V. Demchenko, A. M. Hussein, K. E. Zayed
- 4.4.2.8 Relaxation of two-streaming ion motion in plasma in weak transverse magnetic field 394
A. G. Borisenkova, G. S. Kirichenko

4.4.2.9	Investigation of ion Langmuir oscillations in a plasma-fast ion beam system M. D. Gabovich, A. A. Goncharenko, V. Ya. Poritskii, I. M. Protsenko, I. A. Sološhenko	395
4.5.	<u>Plasma radiation</u>	
4.5.1	<u>Spectral lines and line emission</u>	
4.5.1.1	Measurement of the Ly- α stark profile in a pure hydrogen arc K. Behringier, W. R. Ott	396
4.5.1.2	Approximate treatment of ion dynamics in stark broadening theory E. R. A. Seegre, D. Voslamber	397
4.5.1.3	Regularities in stark broadening parameters J. Puric, Lj. Ćirković	398
4.5.1.4	Collision broadening and shift in the chromium multiplet ($a^7S - y^7P^0$) G. Pujoł, S. Weniger	399
4.5.1.5	Broadening of thallium and indium resonance lines by mercury W. Funk, H.-G. Klöss	400
4.5.1.6	Radiative life-time of the 6^3D_3 level of HgI observed in a low-pressure positive column M. R. Teixeira, R. Rosa	401
4.5.1.7	Molecular radiation in high pressure sodium arc lamps containing mercury or cadmium R. J. Zollweg	402
4.5.1.8	Time dependence of line profiles in argon pulsed discharge D. Grubor, M. M. Popović, V. V. Ursošević	403
4.5.1.9	Optical investigation of pulsed discharge in erosive cell I. D. Voronov, G. V. Ivanov, L. N. Lesnevskiy, G. A. Popov, D. P. Utkin-Edin, D. I. Fomitchov	404
4.5.1.10	Spectroscopic studies of high pressure argon plasma D. L. Bartelheimer, U. H. Baude	405

4.5.2	<u>Continuum radiation</u>	
4.5.2.1	Experimental study of the visible and U.V. continuum of an helium plasma jet J. G l a s s e r , C. D i a t t a , J. C h a p e l l e	406
4.5.2.2	On the origin of the visible continuum radiation in rare gases W. W i e m e	407
4.5.2.3	Effect of resonance states on the electron-neutral-atom bremsstrahlung L. G. D i j a t c h k o v , G. A. K o b z e v , G. E. N o r m a n	408
4.5.2.4	The molecular continua of the lanthanide-iodides W. P i l l z , H.-P. P o p p	409
4.5.2.5	Quantitative investigations on the radiation of the negative iodine ion M. N e i g e r	410
4.5.2.6	Prediction of arc temperature profiles using approximate emission coefficients for radiation losses J. J. L o w k e	411
4.5.2.7	Absolute VUV radiometry with hydrogen arcs - comparisions with blackbody calibrations W. R. O t t , K. B e h r i n g e r	412
4.5.2.8	Extreme ultra-violet radiation of high-current discharge A. A. V e k h o v , F. A. N i k o l a e v , V. B. R o z a n o v	413
4.5.3	<u>Miscellaneous studies of radiation</u>	
4.5.3.1	Decay and deviation from LTE in the H ₂ -arc plasma J. J o r d a n o v , G. K r e u t z b e r g e r	414
4.5.3.2	Comparison between experimental and calculated values of the monochromatic absorption coefficient of some lines of argon I J. B a c r i , S. V a c q u i e , A.-M. G o - m e s , M. H a b i b i	415
4.5.3.3	Spectroscopic investigations of a decaying argon plasma jet out of LTE P. R a n s o n , J. C h a p e l l e	416
4.5.3.4	Spectroscopic study of argon plasma in partial LTE M. S t a n i s a v l j e v i c , J. L a b a t , S. D j e n i z e	417

4.5.3.5	Arc measurements of Fe II oscillator strengths J. M. Bridges	418
---------	---	-----

4.6 Dense plasmas

4.6.1	Kinetic equation for electrons in metal and gaseous plasma S. A. Trigger, N. I. Kluchnikoff	419
4.6.2	Electric transport coefficients for dense metallic vapors at the critical point C. Deutsch, H. Minoo	420
4.6.3	Theory of ionization equilibrium in dense plasmas W. Ebeling, R. Sandig	421
4.6.4	Metal-dielectric transition in dense low temperature cesium plasma N. V. Yermohin, V. M. Kalikavkin, B. M. Kovaliov, A. M. Kozlov, P. P. Kulik, A. V. Pallo	422
4.6.5	The electrical conductivity of dense, highly non-ideal cesium plasma P. P. Kulik, V. M. Melnikov, V. A. Riabii, M. A. Titov	423
4.6.6	Properties of thermally ionized plasma produced by quasiadiabatic compression R. Ha jossy	424

5. EXPERIMENTAL DIAGNOSTICS

5.1 Electrostatic probes

5.1.1 Theory

5.1.1.1	The most important disturbances in obtaining electron energy distribution functions from plane guard ring Langmuir probe characteristics B. Saggaau	425
5.1.1.2	On the analysis of ion velocities in low-temperature plasma by means of multielectrode electrostatic probe L. A. Sena	426
5.1.1.3	Probe measurements in a low temperature highly ionized plasma F. G. Baksh, G. A. Djuzhev, N. K. Mitrofanov, S. M. Shkolnik, V. G. Yuriev	427

5.1.1.4	Electron energy distribution function determined by interpolation of an electrostatic probe curve S. Cirant	428
5.1.1.5	The investigation of the modulated discharge plasma with the help of pulse probe methode A. B. Blagoev, Y. M. Kagan, N. B. Kolokolov, V. M. Milennin, A. H. Muradov	429
5.1.1.6	Theory of ion current collected by cylindrical probes at intermediate pressures P. Tarabek	430
5.1.1.7	Probe analysis in an electronegative plasma based on a measurement of floating potential I. C. Plumb, G. A. Woolsey, D. B. Lewis	431
5.1.1.8	Electrostatic screening, probe characteristics and floating potential in weakly ionized plasma with non-maxwell function of distribution of electron energy I. A. Vasilieva	432
5.1.1.9	The use of electrostatic probes to measure the temperatures of high pressure arcs A.E.F. Gick, M. B. C. Quigley, P. H. Richards, D. T. Swift-Hook	433
5.1.1.10	Selective detection of an electron beam in a discharge K. Wiesemann	434
5.1.2	<u>Experiment</u>	
5.1.2.1	An investigation into the influence of a magnetic field on the increment of the probe floating potential due to radio-frequency voltage G. I. Goryaga, A. A. Kuzovni-kov, G. S. Yaramyshev	435
5.1.2.2	Probe measurements in slotted hollow cathodes G. Medicus, R. A. Olson	436
5.1.2.3	Study of cooling probes in a cesium plasma C. Michel, M. Kornmann, J. C. Braun	437
5.1.2.4	Characteristics of cylindrical Langmuir probes at an intermediate pressure M. Imutake, K. Kuriki	438
5.1.2.5	Comparison of two independent probe methods for the determination of space potential in a stream of magnetised plasma with energetic ions K. S. Golovanivsky, A. M. Punithavelu	439

5.1.2.6	On an angular effect of cylindrical Langmuir probes in flowing plasmas F. Maisenhälder, W. Mayer-höfer	440
5.1.2.7	Secondary effects at orifice probe surface in the glow discharge Gh. Popa, M. Sandulovicu	441
5.1.2.8	Cascade arc plasma parameters and heat transfer characteristics on secondary ring electrode surface I. G. Panevin, B. A. Rytshkov	442
5.2	<u>Spectroscopic methods</u>	
5.2.1	A variable magnification spectrometer M. Clement, B. Moulin, D. Pinet, P. Stevenin	443
5.2.2	An experimental study of xenon flow behind the shock by the Hook method G. K. Tumakaev, V. R. Lazovskaya	444
5.2.3	Stark shift measurements of ionized argon and silicon lines J. Puric, S. Djeniže, Lj. Čirković, J. Labat	445
5.2.4	Radiation standard for the visible and near UV region K. Guenther, R. Radtke	446
5.2.5	Langmuir probe and optical spectroscopy for electron temperature measurement M. Fabry, J. R. Cussenot, M. Numano	447
5.2.6	Application of the open-ended gas counters for diagnostics of plasma at high pressure V. D. Peskov	448
5.2.7	Spectroscopy of axisymmetric plasma sources V. Oklobžija, N. Konjević	449
5.3	<u>Laser techniques</u>	
5.3.1	Two frequencies HCN interferometer P. Belland, D. Véron	450
5.3.2	Homodyne detection of laser light scattered by a theta pinch plasma E. R. Wooding, M. L. Yeoman, D. E. Evans	451

- 5.3.3 The measurement of magnetic fields in high-
-temperature tenuous plasmas by light-scattering
from a ruby laser 452
M. J. Forrest, K. Muroaka,
N. J. Peacock
- 5.3.4 Numerical investigation of the influence of
collisions of the peak structure of the incoherent
scattering spectrum of a laser beam through a
magnetized plasma 453
G. Leclerc, R. L. Meyer
- 5.3.5 A high resolution laser velocimeter for arcs in
flow 454
N. Collings, M. R. Barrault,
G. R. Jones
- 5.3.6 New method of plasma electron density measurement
by a laser 455
G. I. Kosin, N. A. Konovalov,
E. S. Nikulin, E. D. Protsenko,
A. S. Savyolov, V. G. Telkovsky
- 5.4 Electromagnetic techniques**
- 5.4.1 Microwaves
- 5.4.1.1 On determination of electron density profile of
the inhomogeneous plasma cylinder by refraction
technique 456
E. A. Tishchenko, V. G. Zatsepin
- 5.4.1.2 Active submillimeter diagnostics of the moving
UHF discharge in deuterium at high pressure 457
P. L. Kapitza, E. A. Tishchenko,
V. G. Zatsepin
- 5.4.1.3 Microwave interferometer for direct display of the
electron density variation in the low pressure
discharge 458
M. Simersky, M. Tichy,
M. Sicha, M. Valach, M. Lubanski
- 5.4.1.4 The synchrotron radiation spectrum near the
electron cyclotron frequency and its first harmonic,
deduction of the electron distribution
function 459
J. Jacquinet, J. P. Poffé,
J. Waldes
- 5.4.1.5 Sensitivity of the microwave near-field to the
electron profile of a plasma column in waveguide 460
G. Cicconi, V. Molinari,
C. Rosatelli

5.4.1.6	Microwave cavity method for the determination of the electron temperature dependence of recom- bination coefficient P. Lukáč, O. Mikus, Š. Veis	461
5.4.2	<u>Special arrangements</u>	
5.4.2.1	Electron concentration measurements in a partially plasma filled cylindrical open resonator D. Raicu, R. Staná	462
5.4.2.2	Determination of plasma electron density from field patterns of travelling wave circular loop antenna in plasma V. L. Tálekar	463
5.4.2.3	Induction velometry behind a shock front in a T-tube H. Drymael, L. Rybowski	464
5.4.2.4	A method for measuring the azimuthal electrical conductivity of the plasma by using a coil wrapped around the tube M. Sugawara, T. Ieiri	465
5.5	<u>Other diagnostics</u>	
5.5.1	<u>Special methods</u>	
5.5.1.1	Diagnostic of ionized gas by electron beam in X-ray spectrum range L. I. Kusnetsov, A. K. Rebrov, V. N. Yarigin	466
5.5.1.2	On the diagnostic of positive column plasma of the inert gases by bremsstrahlung spectrum Yu. B. Golubowsky, V. A. Ivanov, Yu. M. Kagan	467
5.5.1.3	The Pitot tube in a plasma flow with high energy flux, high electric current density, and relaxa- tion effects S. Krause	468
5.5.1.4	Internal probes for the diagnostics of the pulse plasma J. Maloch, K. Sobra, Z. Staněk	469
5.5.1.5	The inclination of the current layer between the electrodes of the plasma accelerator K. Sobra, J. Maloch, Z. Staněk	470

L

5.5.1.6	The determination of the plasma cluster in the rail accelerator J. Kracík, J. Maf t u l , J. Maloch	471
5.5.1.7	The influence of length of the electrodes on the maximum velocity of the plasma cluster in the rail type accelerator L. Kalivoda, J. Rosenkrantz	472
5.5.1.8	Measurement of transport velocities in dc arc plasma by oscilloscopic method P. S. Todorović, V. M. Vu k a n o - v i c	473
5.5.1.9	New method in optical diagnostic of plasma A. Sprachta	474
5.5.2	<u>Bulk discharge survey methods</u>	
5.5.2.1	A method of recording perturbations in toroidal plasma symmetry M. Korten, P. Noll, G. Waidmann	475
5.5.2.2	Investigation of energy absorption processes in a plasma using light intensity measurements M. M. Larionov, L. S. Levin	476
5.5.2.3	Electron temperature and density measurements behind the reflected shock wave in argon by means of a plasma eater J. Maštovský, L. Rothhardt, G. Jahn	477
5.5.2.4	Transport phenomena in neon glow discharges investigated with radioactive Na tracers. Part I: Measuring equipment L. C. J. Baghuis, H. L. Hagedoorn, J. A. van der Heide , M. Prins	478
5.5.2.5	Transport phenomena in neon glow discharges investigated with radioactive Na tracers. Part II: Determination of the ambipolar field L. C. J. Baghuis, H. L. Hagedoorn, J. A. van der Heide	479
5.5.2.6	Use of waves for continuous registration of changes in a discharge plasma L. Pekárek, M. Chvojka , H. Urbánková	480
5.5.2.7	Direct method of wave analysis in laboratory magnetoplasmas T. Kopci z y n s k i , Z. z a k r z e w - s k i , O. Sti rand	481

5.5.3	<u>Particle extraction diagnostics</u>	
5.5.3.1	A source of hydrogen ion beam for plasma corpuscular diagnostics apparatus calibration K. Jakubka, J. Stöckel	482
5.5.3.2	Radial extraction of ions from a plasma column obtained by reflex discharge J. M. Peureux, J. C. Braun	483
5.5.3.3	Apparatus for the extraction and examination of positive ions produced from low-current-short- duration arcs E. W. Gray, L. G. Mc Knight, J. M. Sawinna	484
5.5.3.4	A time-of-flight study of velocity distribution of metastable atoms effusing from an argon positive column V. Martišovits, I. Košinář	485
