INTRODUCTION	9
CHAPTER 1 BASIC CONCEPTS OF INTRINSIC STOCHASTICITY	
1.1 <u>Onset of stochasticity in deterministic hamiltonian systems.</u>	
1.1.1 A.J. Lichtenberg Determination of the transition between adiabatic and stochastic motion	13-40
1.1.2 D.F. Escande Primary resonances do not overlap	41-51
1.1.3 J.M. Greene Calculation of KAM surfaces	53-62
1.2 <u>Consequences for physical systems.</u>	
1.2.1 S. Aubry Application of the Kolmogorov Arnold Moser theorems to structure problems in condensed matter	63-82
1.2.2 S.W. Mc Donald and A. Kaufman Ray and wave optics of integrable and stochastic system	83-92
1.3 <u>Quantitative definitions of stochasticity</u>	
1.3.1 G. Benettin and L. Galgani Lyapunov characteristic exponents and stochasticity	93-114
1.3.2 C. Froeschle, G. Benettin, J.P. Scheidecker Numerical study of Lyapunov characte- ristic numbers and Kolmogorov entropy of dynamical systems with an increasing number of degrees of freedom	115
1.3.3 F. Doveil Overlap of bounce resonances and Kolmogorov entropy	117-128
CHAPTER 2 CHARGED PARTICLE MOTIONS IN E.M. FIELDS	
2.1 A.N. Kaufman Regular and stochastic particle motion in plasma dynamics	131-157
2.2 C. Karney Velocity-Space diffusion in a per- pendicularly propagating electro- static wave	159-168

2.3	G. Smith	Stochastic motion due to a single wave in a magnetoplasma	169-179
2.4	R.H. Cohen	Stochastic motion of particles in mirror machines	181-191
2.5	J. Krommes	Self-consistent kinetic theory of stochasticity	193-203
CHAPTER 3	PLASMA HEATING AND TRANSPORT		
3.1	<u>Plasma heating</u>		
3.1.1	A. Fukuyama	Stochastic acceleration of charged particles by an electrostatic wave in a magnetized plasma	207-219
3.1.2	Y. Gell and R. Nakach	Stochastic heating of plasma in inhomogeneous magnetic fields	221-237
3.2	<u>Plasma transport</u>		
3.2.1	A.B. Rechester, M.N. Rosenbluth and R.B. White	Statistical description of stochastic orbits in a Tokamak	239-259
3.2.2.	A. Samain and M. Dubois	Disruptions in Tokamak	261-272
3.2.3	G. Casati, E. Lazzaro and S. Nowak	Stochastic effects induced by pulsed R.F. on trapped particles in a Tokamak	273-283
3.2.4	A. Lichtenberg, A. Riviere, T. Edlington, T. Todd	The case for drift island diffusion : results from the Culham levitron	285-296
3.2.5	F. Hamzeh	Comments on overlapping and stochasticity in toroidal-systems	297-311
CHAPTER 4	DISSIPATIVE SYSTEMS AND STRANGE ATTRACTORS		
4.1	<u>Attractors and the onset of turbulence</u>		
4.1.1	Y. Pomeau	Strange attractors	315-328
4.1.2	Y. Pomeau and P. Manneville	Intermittency : a generic phenomenon at the onset turbulence	329-340
4.1.3	P. Couillet, C. Tresser and A. Arneodo	Bifurcation and transition toward stochasticity for dissipative dynamical systems	341-363

4.1.4	C. Tresser and P. Couillet	Critical transition to stochasticity	365-372
4.1.5	R. Lozy	Strange attractors : a class of mappings of R^2 which leaves some cantor sets invariant	373-381
4.2	<u>Applications to plasma turbulence problems</u>		
4.2.1	E.K. Maschke and B. Saramito	On the possible importance of generalized Lorenz equations in the theory of magneto-hydrodynamic stability	383-392
4.2.2	Y. Treve and O.P. Manley	A possible strange attractor in MHD flow	393-402
4.2.3	J.M. Wersinger, J.M. Finn and E. Ott	Bifurcations and "strange" behavior in a coupled three wave system	403-413
4.2.4	J.C. Adam, M.N. Bussac and G. Laval	Stabilization of a linearly unstable mode by resonant non-linear coupling to damped modes	415-423
4.2.5	H. Lashinsky	Transition to turbulence in a plasma with discrete unstable modes	425-437
	LIST OF PARTICIPANTS		439-441
	AUTHORS INDEX		443
