

## CONTENTS

### AN INTRODUCTION TO THE ABSORPTION OF LASER LIGHT IN PLASMAS, T.P. Hughes

|     |   |    |
|-----|---|----|
| 1.  | Introduction  | 1  |
| 2.  | Waves in a Plasma   | 2  |
| 2.1 | Cold Plasma   | 4  |
| 2.2 | Warm Plasma   | 6  |
| 2.3 | Damping of Small Amplitude Longitudinal Waves                 | 9  |
| 2.4 | Particle Trapping in Large Amplitude Waves                    | 11 |
| 2.5 | Wave Breaking   | 17 |
| 3.  | Collisional Absorption  | 21 |
| 3.1 | Linear Inverse Bremsstrahlung                                 | 21 |
| 3.2 | Non-Linear Inverse Bremsstrahlung                             | 24 |
| 4.  | Parametric Instabilities                                      | 27 |
| 4.1 | Parametric Interactions for an Infinite Pump Wavelength       | 29 |
| 4.2 | Development of Instability                                    | 37 |
| 4.3 | Experimental Evidence for Parametric Instabilities            | 41 |
| 5.  | Stimulated Brillouin Scattering                               | 42 |
| 6.  | Raman Scattering and Two-Plasmon Decay                        | 52 |
| 6.1 | Raman Scattering  | 52 |
| 6.2 | Two-Plasmon Instability                                       | 57 |
| 6.3 | Experimental Evidence for Raman and Two-Plasmon Instabilities | 59 |
| 7.  | Resonant Absorption   | 63 |
| 7.1 | Influence of Surface Profile on Resonant Absorption           | 73 |
| 7.2 | Effect of Focussing Optics and Beam Quality                   | 75 |
| 7.3 | Harmonic Generation and Resonant Absorption                   | 75 |
| 8.  | Interactions Between Interactions                             | 83 |
|     | References  | 86 |

## LASER RADIATION TRANSPORT AND PONDEROMOTIVE FORCE, P. Mulser

|     |   |     |
|-----|---|-----|
| 1.  | Refractive Index and Geometrical Optics in Inhomogeneous Plasma                     | 91  |
| 1.1 | Introduction  | 91  |
| 1.2 | Equations of Motion for Ions and Electrons  | 93  |
| 1.3 | The Optical (WKB) Approximation   | 96  |
| 1.4 | Radial Illumination   | 100 |
| 2.  | Electric Field Distribution and Reflection  | 103 |
| 2.1 | Perpendicular Incidence   | 104 |
| 2.2 | Oblique Incidence   | 105 |
| 2.3 | The Stokes Equation   | 107 |
| 2.4 | Electric Field Increase   | 111 |
| 2.5 | Remarks on the Reflection Formula   | 113 |
| 2.6 | Numerical Solution of the Wave Equation   | 114 |
| 3.  | Radiation Pressure  | 115 |
| 3.1 | Definition  | 115 |
| 3.2 | Normal Incidence of Laser Radiation   | 117 |
| 3.3 | Density Structures Due to Light Pressure in Inhomogeneous Laser Plasmas             | 121 |
| 3.4 | Radiation Pressure Dominated Plasma Flow  | 124 |
| 3.5 | On the Stability of Light Pressure Induced Density Structure                        | 131 |
| 3.6 | Local Plasma Acceleration and Influence of Radiation Pressure on Pellet Compression | 131 |
| 3.7 | Oblique Incidence of Radiation  | 133 |
| 3.8 | Self-Generated Magnetic Fields Due to Radiation Pressure                            | 136 |
| 3.9 | Generation of Solitons  | 137 |
|     | References  | 142 |

## THE PHYSICS OF THE CORONAL REGION, M.G. Haines

|     |                                   |     |
|-----|-----------------------------------|-----|
| 1.  | Introduction                      | 145 |
| 2.  | Suprathermal Electrons            | 149 |
| 2.1 | Experimental Evidence             | 149 |
| 2.2 | Origin of Fast Electrons          | 157 |
| 2.3 | A Self-Consistent Density Profile | 163 |

|     |   |     |
|-----|---|-----|
| 2.4 | Scaling of $L$ , $n_H$ and $T_H$  | 170 |
| 2.5 | Transport of Fast Electrons   | 175 |
| 2.6 | The Expanding Sheath  | 184 |
| 2.7 | Reduction of Fast-Electron Preheat  | 189 |
| 3.  | Thermal Electron Transport  | 189 |
| 3.1 | Experimental Evidence of Heat Inhibition                                  | 190 |
| 3.2 | Classical Heat Flux Limitation  | 199 |
| 3.3 | Turbulent Transport   | 205 |
| 3.4 | Atomic Physics and Degeneracy   | 208 |
| 4.  | Generation of Magnetic Fields   | 209 |
| 4.1 | Source of Magnetic Fields   | 209 |
| 4.2 | Non-Linear Development  | 211 |
| 4.3 | Measurements of Magnetic Field  | 211 |
| 4.4 | Heat Flux Inhibition  | 212 |
| 4.5 | Fast Ions Due to $\underline{J} \times \underline{B}$ Force and Hot Rings | 213 |
| 4.6 | Effect of Magnetic Field on Absorption                                    | 214 |
|     | References  | 215 |

#### THE PHYSICS OF THE SUPERDENSE REGION, M.H. Key

|     |   |     |
|-----|---|-----|
| 1.  | Introduction  | 219 |
| 1.1 | Structure of Laser-Produced Plasmas                           | 219 |
| 2.  | Thermal Conduction  | 225 |
| 2.1 | Classical Conductivity  | 225 |
| 2.2 | Free Streaming Flux Limit                                     | 228 |
| 2.3 | Inhibited Conductivity  | 228 |
| 2.4 | Classical Thermal Wave  | 230 |
| 3.  | Plasma Pressure Generated by Laser Irradiation of a Solid     | 232 |
| 3.1 | Introduction  | 232 |
| 3.2 | General Heat Wave Model                                       | 232 |
| 3.3 | Critical Density Chapman Jouguet Deflagration                 | 235 |
| 3.4 | Self Regulating Absorption in Plane Geometry                  | 236 |
| 3.5 | Self Regulating Absorption with Spherical Flow                | 237 |
| 3.6 | Electron Thermal Transport to Densities Above<br>Critical     | 238 |
| 3.7 | Self Regulating Ablation by Electrons (Spherical<br>Geometry) | 239 |

|      |  |     |
|------|--|-----|
| 3.8  | Transient Pressure Due to Hot Electron Preheating                                    | 241 |
| 3.9  | Limiting Steady State Pressure Due to Fast Electron Preheating                       | 242 |
| 3.10 | Experimental Studies of Ablation Pressure  | 244 |
| 3.11 | Experimental Evidence for Inhibited Thermal Conduction and Reduced Ablation Pressure | 249 |
| 3.12 | Experimental Evidence for Hot Electron Preheating                                    | 252 |
| 3.13 | Wavelength Scaling of Ablation Pressure and General Discussion                       | 255 |
| 4.   | Shock Waves  | 259 |
| 4.1  | Basic Theory of a Plane Shock Wave   | 259 |
| 4.2  | Collision of Two Equal Strong Shock Waves  | 264 |
| 4.3  | Spherical Implosion of a Strong Shock Wave   | 265 |
| 4.4  | Propagation of a Shock from a High Density into a Low Density Medium                 | 268 |
| 5.   | Compression of Matter  | 270 |
| 5.1  | Introduction   | 270 |
| 5.2  | Ideal Gases  | 270 |
| 5.3  | Fermi Degenerate Electron Gas  | 271 |
| 5.4  | The Thomas-Fermi Model   | 272 |
| 5.5  | Equations of State Including Binding Forces  | 273 |
| 5.6  | Experimental Determinations of the Equation of State of Condensed Matter             | 274 |
| 5.7  | Rayleigh-Taylor Instabilities  | 276 |
| 6.   | Plasma Compression and Heating in "Exploding Pusher" Targets                         | 279 |
| 6.1  | Introduction   | 279 |
| 6.2  | Experimental Study of Exploding Pusher Targets                                       | 279 |
| 6.3  | Theoretical Models for Exploding Pusher Targets                                      | 289 |
| 6.4  | Conclusion   | 296 |
| 7.   | Plasma Compression in Ablatively Imploded Targets                                    | 296 |
| 7.1  | Introduction   | 296 |
| 7.2  | Simple Shell Targets and Unshaped Laser Pulses                                       | 297 |
| 7.3  | Ablative Implosion Scaling with Laser Wavelength                                     | 304 |
| 7.4  | Compression with Shaped Pulses   | 309 |
| 7.5  | Ablative Implosion Experiments   | 311 |

## DIAGNOSTICS OF PARTICLE EMISSION FROM LASER-PRODUCED PLASMAS, R. Sigel

|  |     |
|--|-----|
| 1. Introductory Remarks  | 661 |
| 2. Analytic Models for the Expansion of a Plasma Fluid into the Vacuum | 661 |
| 2.1 One Temperature Plasma Expansion                                   | 662 |
| 2.2 Two Temperature Plasma Expansion                                   | 669 |
| 3. Measurements of Ion and Electron Emission from the Plasma           | 675 |
| 4. Particles from Nuclear Reactions                                    | 685 |
| 4.1 Some Characteristics of Fusion Reactions and Particle Spectra      | 685 |
| 4.2 Neutron yield  | 688 |
| 4.3 Ion Temperature From the Line-Width of the Reaction Products       | 691 |
| 4.4 Ion Temperature by the Relative Yield Method                       | 693 |
| 4.5 Measurement of the $\rho R$ -Product                               | 695 |
| 5. Particle Imaging of Laser Irradiated Targets                        | 698 |
| 5.1 Pinhole Camera Imaging   | 698 |
| 5.2 Zone Plate Coded Imaging   | 699 |
| Acknowledgement  | 706 |

## DIAGNOSTICS BASED ON ELECTROMAGNETIC RADIATION, N.J. Peacock

|   |     |
|---|-----|
| 1. Basic Theory of Emission and Absorption Processes                            | 711 |
| 1.1 Introduction  | 711 |
| 1.2 Radiation Transport and Line Emission                                       | 712 |
| 1.3 Bound-Free Absorption   | 717 |
| 1.4 Inverse Bremsstrahlung  | 718 |
| 1.5 High Density Effects  | 719 |
| 2. Diagnostics Based on Intensities of Emission Lines from Highly-Ionised Atoms | 723 |
| 2.1 Dependence of State of Ionisation on Laser-Irradiation Parameters           | 723 |
| 2.2 Stationary Versus Non-Stationary Ionisation Balance                         | 725 |
| 2.3 Diagnostics Based on Line Intensities                                       | 730 |
| 3. Emission Line Profiles   | 744 |
| 3.1 Diagnostics of Laser-Irradiated Plasmas Based on                            |     |

|   |     |
|---|-----|
| Line Shapes   | 744 |
| 3.2 Intrinsic Line Shapes (Doppler Broadening, Pressure Narrowing and Magnetic Field Effects) | 746 |
| 3.3 Intrinsic Line Shapes (Stark Broadening)  | 750 |
| 3.4 Opacity Broadening  | 758 |
| 3.5 Derivation of $\langle \rho r \rangle$ from Optically Thick Lines                         | 762 |
| 4. Analysis of X-Ray Emission: Diagnostic Apparatus and Results                               | 765 |
| 4.1 The Composite X-Ray Emission Spectrum   | 765 |
| 4.2 X-Ray and XUV Dispersion Instruments  | 767 |
| 4.3 Spatially-Resolved X-Ray Spectra from Microballoon Targets                                | 769 |
| 4.4 Absorption Spectroscopy: X-Ray Shadowgraphy of Microballoon Targets                       | 777 |
| 4.5 Time-Resolved X-Ray Spectroscopy  | 779 |
| 4.6 X-Ray and XUV Imaging Systems   | 781 |
| 4.7 Broad Band X-Ray Detectors  | 788 |
| 5. Diagnostics Based on Electromagnetic Emission at $h\nu \ll kT_e$                           | 790 |
| 5.1 Stigmatic Grating Spectroscopy-Spectroheliography   | 790 |
| 5.2 Emission at $h\nu \sim \omega_{pe}$   | 792 |
| 5.3 Diagnostics Based on Electromagnetic Beam Probes  | 793 |
