

CONTENTS

INTRODUCTION TO THE PHYSICS AND APPLICATIONS OF LASER PRODUCED PLASMAS

<i>M.H. Key</i>	1
1. Laser Fusion	2
2. Dense Non Classical Plasmas	6
3. X-ray Sources	8
4. X-ray Lasers	10
5. Particle Source Applications	12
6. Beat Wave Accelerator	13
References	15

LASER LIGHT PROPAGATION AND ABSORPTION

<i>P. Mulser</i>	17
1. Collisional Absorption	17
1.1 Momentum Equation	17
1.2 The Collision Frequency	21
1.3 The Hard Sphere Model	23
1.4 Inverse Bremsstrahlung Absorption	26
1.5 Laser Field Effects on Collisional Absorption	29
2. Laser Light Transport	33
2.1 Light Paths	33
2.2 Reflection and Scattering of Laser Light	39
2.3 Wave Pressure and Transient Radiation Forces	47
3. Resonance Absorption	59
3.1 Linear Resonance Absorption	59
3.2 Non-linear Resonance Absorption	68
3.3 Considerations on Wave-breaking	73
References	76

LASER-DRIVEN INSTABILITIES IN LONG SCALELENGTH PLASMAS		PLASMA PROCESSES IN NON-IDEAL PLASMAS	
<i>W.L. Kruer</i>	79	<i>R.M. More</i>	157
1. Introduction	79	1. Introduction	157
2. Raman Scattering	81	1.1 Ideal and Non-ideal Plasmas	158
3. Some Experiments on Raman Scattering	83	1.2 Plasma Processes	162
4. The $2\omega_{pe}$ Instability	90	2. Equation of State	163
5. Brillouin Scattering and Filamentation	92	2.1 Foil Expansion Example	166
6. Summary	99	2.2 Ionization and the Equation of State	168
References	100	2.3 Ion and Radiation Equation of State	169
		2.4 Two Temperature Equation of State	170
STUDIES OF THERMAL ELECTRON TRANSPORT IN LASER FUSION PLASMAS		3. Radiation Processes	174
<i>D. Shvarts</i>	105	3.1 Bremsstrahlung Emission	176
1. Introduction	105	3.2 Free-free Absorption	179
2. Experimental Study of Thermal Transport	108	3.3 Non-ideal Plasma Effects	181
3. Theory of Thermal Electron Transport	119	3.4 Radiative Recombination	183
3.1 The Fokker-Planck Equation and Spitzer-Härm Thermal Conductivity	119	3.5 Bound Electron Screening	184
3.2 Local Extension of Spitzer-Härm Theory	124	3.6 Photoelectric Effect	186
3.3 Simplified Non-local Models	126	3.7 Equivalent Flux of Bound Electrons	187
3.4 Numerical Solution of the Fokker-Planck Equation	131	3.8 Photoeffect as an Electron Collision	188
3.5 Magnetic Field Effects	135	3.9 Line Emission	189
References	138	4. Energy-exchange Coefficients	193
		4.1 Ion Stopping in Plasma Targets	195
COMPRESSION AND HYDRODYNAMICS		4.2 Basic Stopping Formula	196
<i>M.H. Key</i>	143	4.3 Projectile Charge-state	196
1. Introduction	143	4.4 Electron Stopping, Free and Bound	197
2. Ablation at Laser Irradiated Solid Surfaces	143	4.5 Stopping and Virtual Photons	202
3. Thermal Electrons	143	4.6 Problems of the Bethe Method	203
4. Radiation	147	4.7 Inhomogeneous Electron-gas Theory	204
5. Wavelength Scaling	148	4.8 Electron-ion Heat Exchange	205
6. Preheating and 'Exploding Pusher' Compression	149	5. Conclusions	207
7. Thermal Smoothing	150	References	209
8. Thermal Instability	150		
9. Rayleigh-Taylor Instability	153		
10. Ablative Compression	153		
References	155		

INERTIAL CONFINEMENT FUSION		
<i>J. Meyer-ter-Vehn</i>	215	
1. Concept and Achievements	215	
1.1 <i>Inertial Confinement</i>	215	
1.2 <i>Central Ignition and Propagating Burn</i>	217	
1.3 <i>An Implosion Simulation</i>	219	
1.4 <i>ICF Achievements, Drivers</i>	220	
2. A Model for Energy Gain	222	
2.1 <i>The Ignition Spark and its Radius R_S</i>	223	
2.2 <i>The Cold Fuel and its Isentrope α</i>	225	
2.3 <i>Hydrodynamic Efficiency η and gain</i>	226	
2.4 <i>Gain Curves</i>	227	
2.5 <i>Optimal Gain</i>	230	
2.6 <i>Polarized-Fuel Scaling</i>	232	
2.7 <i>Gain Model Considerations</i>	233	
3. Central Implosion Dynamics	234	
3.1 <i>Selfsimilar Gas Dynamics</i>	234	
3.2 <i>Entropy Shaping by Shocks during Implosion</i>	238	
3.3 <i>Final Compression and Spark Build-up</i>	240	
3.4 <i>Selfsimilar Implosion Conclusions</i>	243

RARE GAS HALIDE LASERS		
<i>F. O'Neill</i>	279	
1. Introduction	279	
2. Basic Principles of Operation of E-Beam-Pumped KrF Lasers	284	
2.1 <i>Spectroscopy</i>	284	
2.2 <i>Kinetic Processes in E-Beam-Pumped KrF Lasers</i>	286	
2.3 <i>Absorbers in the KrF Gain Medium</i>	289	
2.4 <i>Sprite - A 200J, 50 ns KrF Laser</i>	295	
3. Current Topics in KrF Laser Research	300	
3.1 <i>Target Experiments with the Sprite KrF Laser</i>	300	
3.2 <i>Pulse Compression and Power Multiplication of KrF Lasers</i>	304	
3.3 <i>Improved Efficiency of E-Beam-Pumped KrF Lasers</i>	307	
4. Conclusions	310	
References	312	

XUV AND X-RAY LASERS		
<i>G.J. Pert</i>	315	
1. Introduction	315	
2. Non-Plasma Systems	320	
2.1 Inner Shell Excitation	320	
2.2 Electron Channelling	322	
3. Plasma Systems	324	
3.1 Collisional Excitation	324	
3.2 Photo-excitation	327	
3.3 Charge Exchange Pumping	328	
3.4 Recombination Lasers	329	
3.5 Scaling to Shorter Wavelengths	335	
4. Conclusions	336	
References	338	
3. Particle Diagnostics from Coronal Plasmas	353	
3.1 Plasma Expansion	353	
3.2 Time of Flight Measurements	354	
3.3 Mass Spectrometer Analysers	358	
3.4 Plasma Calorimeters	359	
4. Radiative Diagnostics of Dense Plasmas	360	
4.1 Spectral Emission Lines	360	
4.2 X-ray Continuum Measurements	371	
4.3 Spatially Resolving X-ray Diagnostics	372	
4.4 Radiography	374	
4.5 Super Dense Plasma Diagnostics	377	
5. Diagnostics with Fusion Products	377	
5.1 Fusion Reactions	377	
5.2 Neutron Measurements	378	
5.3 Charged Particle Measurements	380	
References	383	
DIAGNOSTICS OF LASER PRODUCED PLASMAS		
<i>T.A. Hall</i>	341	
1. Introduction	341	
1.1 Types of Diagnostic and Parameter Range	341	
1.2 Emission and Absorption of Radiation	341	
1.3 Abel Inversion	342	
1.4 Time Resolution	343	
2. Radiative Diagnostics of Coronal Plasmas	344	
2.1 Range of Diagnostics	344	
2.2 Refractive Index of a Plasma	344	
2.3 Interferometry	345	
2.4 Schlieren Effect	347	
2.5 Shadowgraphy	348	
2.6 Magnetic Field Measurements	350	
2.7 Harmonic Emissions	350
