

Contents

Inertial Confinement Fusion	1
<i>J Kilkenny</i>	
Conditions for inertial confinement fusion	1
Hohlraum energy balance and X-Ray drive	13
Laser Plasma Interactions in Hohlräumen	27
<i>W L Krueer</i>	
Stimulated Raman Scattering in Shiva Hohlräumen	29
Laser plasma coupling in Nova hohlräumen	33
Scaling to ignition targets	34
Plasma scaling experiments	39
X-ray Driven Implosions in Laser Heated Hohlräumen	45
<i>A Hauer</i>	
Soft X-ray drive characterisation	47
Implosion experiments	67
Laser-Induced Radiation Hydrodynamics and X-ray Generation	79
<i>R Sigel</i>	
Conversion of laser light into soft x-rays	80
Applications of laser-generated x-rays	91
Hydrodynamic Instabilities in Inertial Confinement Fusion	105
<i>N Hoffmann</i>	
A survey of instabilities	106
Linear analysis of Rayleigh-Taylor instability	108
Ablation-surface instability	116
Bubbles in late-stage Rayleigh-Taylor instability	119
Saturation and multimode interactions in Rayleigh-Taylor instability	125
Instability calculations in ICF implosions	128

Transport in Laser-Produced Plasmas	139
<i>A R Bell</i>	
Transport in ablating plasmas	140
Three dimensional effects	157
Transport by suprathemal electrons	160
Transport in magnetic fields	161
Outstanding problems in transport	164
Atomic and Radiation Physics of Hot Dense Plasmas	169
<i>S Rose</i>	
Equilibrium bound electronic structure in plasmas.	172
Non-equilibrium bound electronic structure in plasmas	181
Conclusions	188
Nuclear measurements of ICF implosions	191
<i>M Cable</i>	
Nuclear physics of fusion reactions	191
Nuclear measurements of ICF plasmas	197
Cryogenic Targets for Inertial Confinement Fusion	209
<i>J K Hoffer</i>	
Do you really need cryogenic targets?	209
Cryogenic fuel layer specifications	210
Fuel layering techniques	212
Summary	217
The Technology of Target Fabrication for ICF	219
<i>L Foreman</i>	
General	220
Hohlraums	221
Polymer capsules	222
Foam shells	224
General foam techniques	225
Beryllium capsules	225
Characterisation Techniques	226
Recent Examples	227

Theory of Short Pulse Interaction	231
<i>P Mulser</i>	
The hot solid	233
Collisional absorption	239
Collective laser-plasma interaction	244
Femtosecond And Subpicosecond Ultra-Intense Lasers	253
<i>A Migus</i>	
Bloch-Maxwell equations and propagation equations	254
Ultrashort pulses and frequency representation	258
Pulse engineering and characterisation.	267
The fundamentals on amplification.	278
Femtosecond oscillators: the ultimate limit in visible optics?	281
Amplification of pulses and the CPA scheme	283
Conclusions and perspectives	286
X-Ray Lasers	293
<i>G J Pert</i>	
Mirrorless lasers	294
Scaling relations	295
Laser medium	298
Plasma lasers	300
Conclusions	310
Generation of Relativistic Plasma Waves by Intense Radiation	313
<i>R Bingham</i>	
Introduction	313
Beat wave generation of relativistic waves.	314
Wakefield generation of plasma waves	320
Relativistic self-focusing and optical guiding	326
Address List	329
Index	335
